 There is simply no other textbook as effective in getting students excited about and involved with psychology as Plotnik's exceptional text. Using his hallmark "multimedia on the printed page" approach, Rod Plotnik makes the concepts of psychology come to life! Plotnik's book is far more than just a good read and a compelling presentation--it is also a book written by a teacher committed to helping students master the content of psychology. From the side-by-side visual summaries to the concept reviews, Plotnik's text is designed throughout for student mastery. Professors report that all the important content is covered in the Plotnik book--in a way that "hooks" students and gets them to read on. And Plotnik's commitment to teaching extends into the ancillaries that accompany the text. The activities in the Instructor's Manual are exciting, original, and offer truly innovative ways to get students involved in the concepts of the course. In many of today's psychology classrooms, the printed pages are just the beginning! In this exciting new Sixth Edition, the Learning Links feature references to the exciting NEW text-specific PowerStudy CD-ROM, developed by Rod Plotnik himself, in conjunction with Tom Doyle. Guided by the CD-ROM and the in-text references, students will launch into whole new worlds of interactive learning and exploration.

 Jim Kalat's best-selling INTRODUCTION TO PSYCHOLOGY takes a "critical thinking" approach to the major theories and concerns of psychology. By prompting students to ask themselves questions like "How was this conclusion reached?" and "Does the evidence really support it?," Kalat encourages the use of scientific principles. He walks students through the hypothesis-method-results-interpretation steps that psychologists use when attempting to answer questions about human intellect, emotion, and behavior. Kalat's approach is proven to help students separate what merely sounds plausible from what is scientifically provable both in the psychology classroom and beyond it. With his humorous writing style and hands-on "Try It Yourself" exercises, Kalat puts students at ease and gets them involved with even with the most intimidating concepts. Within each chapter, he "chunks" the material into a modular format so that students can master one idea at a time, building confidence as they go. This format makes it convenient for instructors to assign material to match the way they teach the course. Kalat's supplements package includes substantial resources for professors and students alike. Students receive a free CD-ROM with the text, free

access to the Book Companion Web Site (featuring a personalized Self-Study Assessment program--see below), free access to InfoTrac College Edition, and free access to vMentor online tutoring. Instructors receive an Instructor's Resource Manual (now in a three-ring binder format), Test Bank with item analysis, and much more. See below for details.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.

 This book brings together leading scholars of Caribbean education from around the world. Schooling continues to hold a special place both as a means to achieve social mobility and as a mechanism for supporting the economy of Caribbean nations. In this book, the Caribbean includes the Greater and Lesser Antilles. The Greater Antilles is made up of the five larger islands (and six countries) of the northern Caribbean, including the Cayman Islands, Cuba, Hispaniola (Haiti and the Dominican Republic), Puerto Rico, and Jamaica. The Lesser Antilles includes the Windward and Leeward Islands which are inclusive of Barbados, St. Vincent, Trinidad and Tobago along with several other islands. Each chapter provides a unique perspective on the various social and cultural issues that define Caribbean education and schooling. The Handbook on Caribbean Education fills a void in the literature and documents the important research being done throughout the Caribbean. Creating a space where Caribbean voices are a part of "international" discussions about 21st century global matters and concerns is an important contribution of this work.

Discovering Psychology Wadsworth Publishing Company
 A History of Modern Psychology, 3rd Edition discusses the development and decline of schools of thought in modern psychology. The book presents the continuing refinement of the tools, techniques, and methods of psychology in order to achieve increased precision and objectivity. Chapters focus on relevant topics such as the role of history in understanding the diversity and divisiveness of contemporary psychology; the impact of physics on the cognitive revolution and humanistic psychology; the influence of mechanism on Descartes's thinking; and the evolution of the third force, humanistic psychology. Undergraduate students of psychology and related fields will find the book invaluable in their pursuit of knowledge.

Counseling Across the Lifespan by Cindy L. Juntunen and Jonathan P. Schwartz is a practical book that helps readers provide effective mental, emotional, and behavioral health services to clients across the continuum of care, from health promotion through long-term treatment and remediation. Anchoring each chapter within a life stage—from childhood through older adulthood—the text identifies the nature and origin of various psychological issues and emphasizes the importance of anticipating and responding early to concerns that arise for large portions of the population. The Second Edition features new chapters and expanded coverage of important topics, such as sociocultural contextual factors and interprofessional health perspectives.

Problems are a central part of human life. The *Psychology of Problem Solving* organizes in one volume much of what psychologists know about problem solving and the factors that contribute to its success or failure. There are chapters by leading experts in this field, including Miriam Bassok, Randall Engle, Anders Ericsson, Arthur Graesser, Keith Stanovich, Norbert Schwarz, and Barry Zimmerman, among others. The *Psychology of Problem Solving* is divided into four parts. Following an introduction that reviews the nature of problems and the history and methods of the field, Part II focuses on individual differences in, and the influence of, the abilities and skills that humans bring to problem situations. Part III examines motivational and emotional states and cognitive strategies that influence problem solving performance, while Part IV summarizes and integrates the various views of problem solving proposed in the preceding chapters.

Introduction to Psychology (ISE) Cengage Learning

Written by Dr Sandi Mann, Senior Lecturer at the University of Central Lancashire, *Psychology: A Complete Introduction* is designed to give you everything you need to succeed, all in one place. It covers the key areas that students are expected to be

confident in, outlining the basics in clear jargon-free English, and then providing added-value features like summaries of key experiments, and even lists of questions you might be asked in your seminar or exam. The book uses a structure that mirrors the way Psychology is taught on many university courses. Chapters include key topics in psychology research; cognitive issues, including language, emotion, memory and perception; individual differences - intelligence, personality and gender; social psychology; mental health and psychological disorders/abnormal psychology and the treatment of such; the nervous system; and sleep.
