Turning wood can be a relatively low cost hobby (in woodworking all things are relative). A mini-lathe, a set of turning tools, a grinder for sharpening, a work light and some protective gear can be purchased for between \$750 and \$1000. A mini-lathe can easily be stored under a bench. Setting it all up takes a relatively small amount of space. This book is designed to give you an understanding of the tools used by turners and the skills to safely and effectively use them. You'll practice so that you start to develop a "feel" for turning. The class begins with the fundamental rules for turning spindles safely and confidently and progresses to expanding your newly learned skills to turning of bowls from green (freshly cut) wood.

Charcoal Foundry, the first book in the "Metal Working Shop From Scrap Series", gives you plans for building a metal melting furnace and instructions on basic pattern making and molding. All the information needed to set up a foundry in your work shop can be found in this book. Simply stated, if you can build a sand castle or make a mud pie, you can make a sand mold to produce castings for your metal shop projects. The main ingredient in these projects is scrap aluminum and pot metal. The only tools you need to get started are ordinary home shop hand tools, many of which are probably already in your possession. Much of the remainder is found as salvage or cast-off and little expense need be involved. The charcoal foundry is simple to build and operate and the initial cost is so low that it can be in the reach of nearly anyone. And the fundamentals of pattern-making and molding are easily understood and mastered. Once you have built the charcoal foundry and the metal lathe in book 2, there is little beyond your reach by way of shop equipment. Build as large or small as you wish and you are your own parts supply company. If you already have some machine shop equipment, you will find that adding a foundry to your shop greatly expands your capacity. Being able to produce your own castings for accessories and equipment is a great advantage. Design your own, make a copy or follow a plan. It's easy when you're in control and can produce your own castings.

Make Your Own Treadle Lathe Full color paperback edition. This title is also available as a B&W 'workshop-friendly' paperback edition and as a Kindle eBook. "Make Your Own Treadle Lathe" is a practical, step by step guide to building a foot-powered

lathe for light duty wood turning. You can build your own treadle lathe by following the well illustrated steps presented in this compact book. The book covers: - Materials & components - Frame and headstock - Belt and tensioner - Tailstock - Tool rest - Flywheel - Using the lathe The author also provides information on some non-turning uses for the lathe and sources for, and some shop-made alternatives to, the parts you may not have. All of the wood needed to build your lathe can be found at the local lumber yard or home center. Use 'Make Your Own Treadle Lathe' to make a near-duplicate of the author's lathe or as inspiration to build the unique human-powered lathe of your dreams. ----- From the Introduction... Why this book exists: During the twenty years or so since I built this foot-powered treadle lathe, I have received many requests for drawings or plans. The lathe has been used as part of our traditional woodworking demonstrations and it never fails to draw a crowd. Of course, the reason the lathe exists is because I felt a need for it as a tool. Design considerations: Some of the main considerations when designing the lathe were: * Human powered - our solar energy system was pretty small at the time * Size - it had to be less than 42" tall to fit into our old truck * Compact - since it would sit in our small shop most of the time, a small footprint was essential * Portable - as in not too cumbersome or heavy * Functional - it had to perform the basic duties of a light-duty lathe * Adaptable - I had in mind several non-traditional uses for the tool, such as sanding ----- Many unique and usable lathes have been built using earlier editions of this book. This book provides you with the instructions, photos and illustrations, and inspiration to build your own treadle lathe!

Considered the Bible of rod building Essential guide for fishermen making their own rods Especially useful for the experienced custom builder Have you ever wondered what it would feel like to have a rod that feels like a part of you and not just a tool? Have you ever wanted to make your own fishing rod that rivals those in stores? If you answered "yes" to either question, this book is absolutely for you. Dale P. Clemens encourages all fishermen to have a rod that is specifically customized for his or her style. Advanced Custom Rod Building is the guide you need to make your own. This guide highlights the key points needed to make tackle that is better than anything that could be bought in a store. It also includes clear illustrations, figures, and tables to help the experienced custom builder. Clemens shares techniques for building rods used in all conditions, whether light freshwater or heavy surf. Thanks to this book, building your own custom rod that will be beautiful and durable isn't a mystery. Skyhorse Publishing is proud to publish a broad range of books for fishermen. Our books for anglers include titles that focus on fly fishing, bait fishing, fly-casting, spin casting, deep sea fishing, and surf fishing. Our books offer both practical advice on tackle, techniques, knots, and more, as well as lyrical prose on fishing for bass, trout, salmon, crappie, baitfish, catfish, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.
