### **Landscapes of Literacy**

Singapore : Economy and Environment Program for Southeast Asia

This guide has been prepared for agricultural extension workers to

introduce them to some of the principles of economics that are relevant to smallholder farming and in particular market-oriented farming. The reader will gain a basic understanding of some of the terms and concepts used in economics and relate them to the day-to-day decisions that farmers

make. The aim of this guide is to build skills that will enable extension workers to assist farmers make the kinds of farm management decisions that lead to greater farm profitability.

The Sustainability  
Assessment of Food and  
Agriculture systems  
(SAFA) Guidelines were  
developed for assessing  
the impact of food and

agriculture operations on  
the environment and  
people. The guiding vision  
of SAFA is that food and  
agriculture systems  
worldwide are  
characterized by all four  
dimensions of  
sustainability: good  
governance,  
environmental integrity,  
economic resilience and  
social well-being.

Business Pig ICFAI Books  
This publication aims to  
inspire budding  
entrepreneurs in Africa to  
consider business  
opportunities in  
agriculture and agro-

industry, broadly defined.  
It is intended to be a  
promotional tool, as a sort  
of call to arms,  
particularly for women  
and youth. It also aims to  
serve as an educational  
tool and knowledge  
product in business  
schools and  
entrepreneurship  
incubator programmes for  
case study-based learning  
on operating an  
agribusiness or agro-  
industry enterprise in  
Africa. The publication  
offers guidance to  
agripreneurs on how to  
overcome or avoid

potential pitfalls and learn from the paths set out by the 12 agripreneurs, whose stories reflect real-life experiences of agribusiness development in Africa. It should be seen as a collection of resources on agripreneurship, focused on these four topical areas: scale, women, youth, and challenging environments, while providing guiding advice for agripreneurs and policy-makers. In addition to educating entrepreneurs, it is important to highlight the

fundamental role of policy-makers in shaping the enabling environment for agripreneurship. In this context, the publication aims to provide concrete policy recommendations on how to improve the enabling environment for agripreneurship, based on the advice of the 12 agripreneurs featured here. The aim is to guide policy-makers to improve these targeted areas, and inspire them to do so by providing accounts of successful agripreneurs who have built businesses with positive economic,

social and environmental impacts on national development. Setting up and running a small-scale cooking oil business National Academies Press  
La agricultura por contrato es objeto de un interés creciente, especialmente en países que anteriormente habían conocido una política de planificación centralizada, y en aquellos que han liberado sus mercados tras el cierre de las juntas de mercadeo. Los cambios en los hábitos de

consumo, por ejemplo el mayor número de establecimientos de restauración rápida, la función cada vez más importante de los supermercados y la constante expansión del comercio mundial de productos frescos y elaborados, han dado un ulterior impulso a la agricultura por contrato. El propósito de esta guía es proporcionar consejos a las administraciones de las empresas de agricultura por contrato existentes acerca de la forma de

mejorar sus operaciones; a las empresas que están considerando la posibilidad de iniciar contratos agrícolas sobre la base de condiciones previas y decisiones de gestión que aseguren resultados satisfactorios; y a los funcionarios de gobierno que pretenden promover nuevas operaciones de contrato o llevar a cabo el seguimiento de las existentes. En esta guía se describen detalladamente los procedimientos, funcionamiento interno y

mecanismos de seguimiento de esta forma de agricultura; y se hace hincapié en que solo es posible estipular acuerdos agrícolas sostenibles cuando los distintos interesados están comprometidos en una colaboración a largo plazo.

Scale and Access Issues Affecting Smallholder Hog Producers in an Expanding Peri-urban Market National Academies Press  
A dramatic increase over the past fifteen years in domestic pork demand

and production in the Philippines has created a potentially profitable opportunity for poor rural and agricultural households. In Southern and Central Luzon, the two biggest markets, however, smallholder pig producers hold only a minority share of total production compared to larger commercial farms. This report seeks to assess the scope for smallholders to remain in business by analyzing the relative profitability of small and large farms. Using field data from pig-

producing households, the researchers assess the role of internal and external factors in determining a household's participation in production and marketing and examine the combination of technical and allocative efficiency exhibited by specific farms under particular circumstances. They conclude that the smallest-scale pig producers will not survive market competition and will require alternative occupations. Many others, however, could profit from pig production if policy

and institutional changes ensure their access to inputs, to animal health services that can guarantee output quality, and to markets for higher quality output. These findings are a valuable contribution to poverty reduction efforts in the Philippines.

[African swine fever \(ASF\) detection and diagnosis](#)

Daya Books

Small animals have a large potential and provide numerous opportunities to support smallholders farmers and their livelihoods. They

provide meat at low cost for small-scale farmers and at affordable prices to consumers enabling access to animal protein even to the poorest members of a community. It is hoped that development workers, policy-makers and others involved recognise the opportunities and benefit that can derive from small animal enterprises and implement projects and development plans that foster such enterprises.

*Air Emissions from Animal Feeding Operations* Food & Agriculture Org.

The Agricultural Resource Management Survey (ARMS) is the federal government's primary source of information on the financial condition, production practices, and resource use on farms, as well as the economic well-being of America's farm households. ARMS data are important to the U.S. Department of Agriculture (USDA) and to congressional, administration, and industry decision makers when they must weigh alternative policies and programs that touch the

farm sector or affect farm families. ARMS is unique in several respects. As a multiple-purpose survey with an agricultural focus, ARMS is the only representative national source of observations of farm-level production practices, the economics of the farm businesses operating the field (or dairy herd, greenhouse, nursery, poultry house, etc.), and the characteristics of the American farm household (age, education, occupation, farm and off-farm work, types of

employment, family living expenses, etc.). No other data source is able to match the range and depth of ARMS in these areas. American agriculture is changing, and the science of statistical measurement is changing as well. As with every major governmental data collection with such far-reaching and important uses, it is critical to periodically ensure that the survey is grounded in relevant concepts, applying the most up-to-date statistical methodology, and

invested with the necessary design, estimation, and analytical techniques to ensure a quality product. ARMS is a complex undertaking. From its start as a melding of data collected from the field, the farm, and the household in a multiphase, multiframe, and multiple mode survey design, it has increased in complexity over the decade of its existence as more sophisticated demands for its outputs have been made. Today, the survey faces difficult choices and challenges,

including a need for a thorough review of its methods, practices, and procedures. Understanding American Agriculture : Challenges for the Agricultural Resource Management Survey summarizes the recommendations of the committee who wrote the survey. *Managing Risk in Farming* IDRC The result of a collaborative effort by small business owners and advisers in ACP countries, this manual covers everything you

need to know about starting up and managing a small-scale cooking oil business. Helpfully illustrated with numerous tables, checklists and case studies, it highlights important aspects such as production, processing and quality control.

Marketing, packaging, branding and customer care are also covered, along with invaluable advice on how to plan and manage finances.

*The Singapore Experience*  
Food & Agriculture Org  
The 2006 Livestock Report Highlights critical

issues that arise from the globalisation of the Livestock sector. It is the first of a series that aims to stimulate broad debate, and to this end it covers a wide spectrum of topics. Five papers take a global perspective on various topics (including the management of transboundary animal diseases, the future of small-scale dairying, animal genetic resources...) and one takes a snapshot of the Asian region. (Also available in French and Spanish).

The Goat World Food & Agriculture Org.

A joint FAO and World Bank study which shows how the farming systems approach can be used to identify priorities for the reduction of hunger and poverty in the main farming systems of the six major developing regions of the world.

**An Ethnographic Study of Functional Literacy in Marginal Philippine Communities** IDRC

Given the current worsening of the African swine fever situation worldwide, this field

manual will be aimed to assist veterinarians in the prompt recognition and detection of the disease and the immediate control steps at farm level.

### **Philippine Tilapia**

**Economics** International Development Research Centre Books  
Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide,

methane, and other pollutants emitted from livestock and poultry farms, and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short - and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to

focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.

### **Pig Waste Management and Recycling** Food & Agriculture Org.

The domestic pig is perceived as an animal with intelligence and character and yet, in the industrialized world, the majority of people have had little or no contact with them. Pigs are subject to a wide range of environments from the tropics to the sub-arctic,

ranging from small-scale, extensive systems to large-scale intensive systems. They may spend their whole life on one farm or may be subject to long-distance transport multiple times. Not surprisingly, many aspects of their life experiences can impact their welfare. This book brings together a team of leading pig welfare research scientists to review the natural history of the pig, the welfare of pigs at different stages of life and to indicate what the future holds in terms

of pig welfare. The text is aimed at researchers and teachers working in veterinary and animal science together with those working in the pig industry and for governmental and non-governmental animal welfare organizations. *The Welfare of Pigs* Food & Agriculture Org. "This document was created to provide background on Cambodia and its ethnic minorities at the Regional Workshop on Indigenous Peoples and Poverty Reduction. Examined is the definition

of indigenous peoples and ethnic minorities in Cambodia, their characteristics, their history, and their geographical locations. Also reviewed is present law and policy relating to these groups as it affects programs and policies for poverty reduction. Various projects for the development of indigenous peoples are presented, and trends, causes, and perceptions relating to their poverty are explored. General and specific concerns that need to be addressed by

government and donor institutions are identified, and an action plan that can be used by both national and international organizations to focus and coordinate future development efforts for highland indigenous peoples is provided."

**Our Farm and Building Book** Springer Science & Business Media

Thirteen marginal Philippine communities were examined in an ethnographic study of the meaning of functional literacy and whether literacy invariably

promotes development. The 13 sites were purposely selected to provide a broad sampling from three standpoints: (1) major livelihood and form of economic activity (farming, fishing, urban poor, disaster areas); (2) ethnolinguistic grouping (Luzon, Visayas, Mindanao); and (3) lifestyle or rhythm of life in the community (traditional, transitional, Moslem Filipino minority, lowland Christian majority, urban poor, developmental). The sample functional literacy

rate in the study's communities ranged from 34.4% to 79.8%. Special attention was paid to the following topics: community life as a context of literacy practice; community knowledge and the passage to a literate tradition; different practices, meanings, and definitions of functional literacy in different contents; constraints in the relationship between literacy and development; and possibilities for literacy in conceptualizing a school of the people.

The study demonstrated that the concepts of literacy and numeracy cannot be separated from their social and cultural settings and that standard measures of literacy used in industrialized countries are often inappropriate in other nations. (Eleven tables/figures are included. The report contains 41 references. Appended is information about the quantitative method and data analysis.) (MN)

**Livestock's Long Shadow** Food & Agriculture Org.

"The purpose of this booklet is to highlight the many opportunities and benefits that pigs can provide to small-scale farmers, reducing their vulnerability and increasing their food and income security as well as providing a high value animal protein for more balanced diets. The booklet is focused on creating awareness and promoting pigs as a viable diversification enterprise within the context of small-scale farming."-- Introduction.

Farming Systems and Poverty Food & Agriculture Org  
This book synthesizes results from a 7-year program of applied research on community-based approaches to natural resource management in Asia. The

11 case studies featured illustrate how local innovations in participatory natural resource management can strengthen livelihoods, build capacity for local governance, and spark policy change. The lessons are derived from the application of a participatory action research framework that engaged resource users, local governments, and researchers in collaborative learning. They illustrate practical innovations to strengthen livelihoods through

improved collective resource management practices and broader technology choices.

**Cooperative Enterprises** Backyard and Commercial Piggeries in the Philippines Environmental Consequences and Pollution Control Option Artificial insemination is used instead of natural mating for reproduction purposes and its chief priority is that the desirable characteristics of a bull or other male livestock animal can be passed on more quickly

and to more progeny than if that animal is mated with females in a natural fashion. This book contains under one cover 16 chapters of concise, up-to-date information on artificial insemination in buffalos, ewes, pigs, swine, sheep, goats, pigs and dogs. Cryopreservation effect on sperm quality and fertility, new method and diagnostic test in semen analysis, management factors affecting fertility after cervical insemination, factors of non-infectious nature

affecting the fertility, fatty acids effects on reproductive performance of ruminants, particularities of bovine artificial insemination,

sperm preparation techniques and reproductive endocrinology diseases are described. This book will explain the advantages and

disadvantages of using AI, the various methodologies used in different species, and how AI can be used to improve reproductive efficiency in farm animals.
