Reporting Technical Information is a classic in the field of technical writing that has maintained its leadership position for over 30 years. It began as a book most often used in engineering departments, and it is known for its emphasis on the rhetorical nature of writing; it aims to help writers 1) understand their readers and the context in which their documents will be read and used; 2) define their purpose in writing; and 3) design documents with those issues as critical guideposts. The 11th edition takes a new and broader direction in its intent to prepare students in a wide variety of science, health, business, engineering, and technical majors to develop the kinds of documents they are most likely going to need to write in a work environment. In addition to choosing examples from a broader range of disciplines, the text will focus on the development of written and oral communications in terms of both online and hardcopy presentations. It will also make the line between business and technical communication less distinct, as that line has blurred in both curricula and businesses. Of paramount importance will be the development of a better website for this edition, with clear integration to the text. Tebeaux and Dragga will ensure that revisions reflect contemporary business practices.
