<p>Ubaldis (1327-1400). <u>Radicalization, Terrorism, and Conflict</u> Springer Probability and Statistics & Complex Variables Knowledge Driven Solutions for Building and Managing Subsurface 3D Geological Models Cambridge University Press "This book contains a systematic study of economic institutions during the Spanish Enlightenment in the area of</p>	<p>print culture, education and the organisation of financial matters at state level. The book is a fresh interpretation of political economy's contribution to the development of the European Enlightenment . Far from being a straightforward intellectual phenomenon, this new science played a crucial role in both the circulating and institutionalisation of</p>	<p>Enlightenment culture and the process of political unification and articulation undergone by the Spanish monarchy, which culminated in a constitutional culture"-- <u>Probability and Statistics & Complex Variables</u> Editions TECHNIP This third book on Well Logging, focuses on reservoir evaluation of the main goal is the determination of the hydrocarbon</p>
---	--	--

volume existing in the drilled well and the discovered field. This evaluation requires the determination of several factors: the reservoir volume; the reservoir tectonic and stratigraphic settings (spatial & temporal position; the presence of fractures; the reservoir mineralogical composition; the hydrocarbon volume in place and extractible, which depends on

the saturation of hydrocarbon in each unit composing the reservoir, which, in turn, depends on: the total pore volume of each unit composing the reservoir, the pore size, which is a function of the texture (grain size, sorting, packing...), the diagenetic effects affecting the initial porosity ((compaction, cementation, transformation, dolomitization, dissolution...)) undergone since the deposition of

the sediment; the hydrocarbon type; the permeability which depends on sedimentary features, fractures, dissolution and fluid type; the production potential that is a function of the permeability and the reservoir pressure. The determination of these factors will be considerably improved using a complete logging set including images of the borehole wall and nuclear

magnetic resonance data and their interpretation by a team including geologist, geophysicist, petrophysicist and reservoir engineer in order to determine the depositional environment which can be precisely determined from well logging data, possibly calibrated on core data, taking into account: the facies of each depositional unit (composition, texture, internal structure,

thickness); the type of facies succession composing genetic increment and genetic sequence. This determination, completed by the detection of the faults crossed by the well, will allow a more precise interpretation of seismic data and consequently a better modeling of the reservoir for its economical evaluation and development. The progressing cavity pump is a recent innovation in petroleum production. It rapidly gained an important place in the production of heavy oils containing gas. It has now been confirmed as very efficient for the production of large flow rates of light and abrasive oils. Driven by rod strings from the surface, it is a

simple, rugged and cheap equipment. The aim of this book is to provide clear and condensed information related to the principles, qualities and performances of this system. This book is intended to provide the choice criteria of a progressing cavity pump and the operational conditions for its implementation by technicians and field development managers. Con

tents: 1. Principle and general description of the progressing cavity pump. 2. PCP characteristics . 3. Selection of a PCP. 4. Presence of gas at the pump inlet. 5. Driving from surface of PCP. 6. Installation, operation and maintenance of PCP. 7. An economical completion with the "insert" pump. 8. The electrical submersible PCP. Bibliography. Index. *Groundwater*

Resources and Salt Water Intrusion in a Changing Environment Technip Editions The first edition of this book demystified the process of well log analysis for students, researchers and practitioners. In the two decades since, the industry has changed enormously: technical staffs are smaller, and hydrocarbons are harder to locate, quantify, and produce. New drilling

techniques have engendered new measurement devices incorporated into the drilling string. Corporate restructuring and the "graying" of the workforce have caused a scarcity in technical competence involved in the search and exploitation of petroleum. The updated 2nd Edition reviews logging measurement technology developed in the last twenty years, and expands

the petrophysical applications of the measurement s. [Franks at Mamluk and Ottoman Courts and Markets](#) Elsevier This publication is a general introduction to common openhole logging measurement s, both wire line and MWD/LWD, and the interpretation of those measurement s to determine the traditional analytical goals of porosity, fluid

saturation, and lithology/mine ralogy. It is arranged by the interpretation goals of the data, rather than by the underlying physics of the measurement s. The appendix files contain digital versions of the data from the case studies, a summary guide to the measurement s and their interpretation, and a simple spreadsheet containing some of the more common interpretation algorithms.

The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For

each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, `net.datastructures`. This package forms a coherent library of data structures and algorithms in Java

specifically designed for educational purposes in a way that is complementary with the Java Collections Framework.

During the past ten years, neuroradiological evaluation of the neonatal and the prenatal brain has advanced tremendously. However, even though they are intrinsically related, these two critical stages in brain development are usually studied and presented</p>

separately. In order to have a sound understanding of neonatal brain diseases, detailed knowledge of prenatal brain pathology is immensely helpful; conversely, knowledge of neonatal brain disease is a prerequisite for understanding many fetal brain lesions. Written by experts in the field, Perinatal Neuroradiology will be of value for neuroradiologists and pediatric radiologists,

as well as obstetricians and neonatologists .

 This book provides technical information on well completion, from drilling in the pay zone to production start-up. It also covers the main methods for artificial lift, and well servicing. The reader will find a discussion of the concepts and equipment that are indispensable for scheduling and designing completion and servicing operations. The book's chief objective

is to provide comprehensive information to those who require a thorough understanding of the completion engineer's aims and the resources he needs for oil field development and production. It is particularly well-suited to the needs of the specialist whose field of activity is located upstream from oil and gas production, e.g., geologists, geophysicists, and reservoir,

drilling or production facility engineers. It should also be of use to oil company administrative personnel, including those in management, and those in the insurance and legal departments. The text is fully illustrated, thus helping the reader grasp the basics of this highly technical field. Contents: 1. Introduction to completion. 1.1. Main factors influencing completion

design. 1.2. Overall approach to a well's flow capacity. 1.3. Major types of completion configurations. 1.4. Main phases in completion. 2. Connecting the pay zone and the borehole. 2.1. Drilling and casing the pay zone. 2.2. Evaluating and restoring the cement job. 2.3. Perforating. 2.4. Treating the pay zone. 2.5. The special case of horizontal wells. 3. The equipment of naturally flowing wells.

- 3.1. General configuration of flowing well equipment. 3.2. The production wellhead. 3.3. The production string or tubing. 3.4. Packers. 3.5. Downhole equipment. 3.6. Subsurface safety valves. 3.7. Running procedure. 4. Artificial lift. 4.1. Pumping. 4.2. Gas lift. 4.3. Choosing an artificial lift process. 5. Well servicing and workover. 5.1. Main types of operations. 5.2. Light operations on live wells. 5.3. Heavy operations on live wells. 5.4. Operations on killed wells. 5.5. Special cases. Bibliography. Index. *Well Logging Handbook* Technip Editions This volume documents and explains the remarkable resilience of emerging nations in East Asia and Latin America when faced with the global financial crisis in 2008-2009. Their quick bounceback from the crisis marked a radical departure from the past, such as when the 1982 debt shocks produced a decade-long recession in Latin America or when the Asian financial crisis dramatically slowed those economies in the late 1990s. Why? This volume suggests that these countries' resistance to the initial financial contagion is a tribute to financial-sector reforms undertaken over the past

two decades. The rebound itself was a trade-led phenomenon, favoring the countries that had gone the farthest with macroeconomic restructuring and trade reform. Old labels used to describe "neoliberal versus developmentalist" strategies do not accurately capture the foundations of this recovery. These authors argue that policy learning and institutional reforms adopted in response to

previous crises prompted policymakers to combine state and market approaches in effectively coping with the global financial crisis. The nations studied include Korea, China, India, Mexico, Argentina, and Brazil, accompanied by Latin American and Asian regional analyses that bring other emerging markets such as Chile and Peru into the picture. The substantial differences

among the nations make their shared success even more remarkable and worthy of investigation. And although 2012 saw slowed growth in some emerging market nations, the authors argue this selective slowing suggests the need for deeper structural reforms in some countries, China and India in particular.

The bestselling phenomenon and inspiration for the award-winning film. Earthy, magical, and utterly charming, this tale of family life in turn-of-the-century Mexico blends poignant romance and bittersweet wit. This classic love story takes place on the De la Garza ranch, as the tyrannical owner, Mama Elena, chops onions at the kitchen table in her final

days of pregnancy. While still in her mother's womb, her daughter to be weeps so violently she causes an early labor, and little Tita slips out amid the spices and fixings for noodle soup. This early encounter with food soon becomes a way of life, and Tita grows up to be a master chef, using cooking to express herself and sharing recipes with readers along the way. *Unexpected Outcomes*

This Special Issue presents

the work of 30 scientists from 11 countries. It confirms that the impacts of global change, resulting from both climate change and increasing anthropogenic pressure, are huge on worldwide coastal areas (and critically so on some islands in the Pacific Ocean), with highly negative effects on coastal groundwater resources, which are widely affected by seawater intrusion.

Some improved research methods are proposed in the contributions: using innovative hydrogeological, geophysical, and geochemical monitoring; assessing impacts of the changing environment on the coastal groundwater resources in terms of quantity and quality; and using modelling, especially to improve management approaches. The scientific

research needed to face these challenges must continue to be deployed by different approaches based on the monitoring, modelling and management of groundwater resources. Novel and more efficient methods must be developed to keep up with the accelerating pace of global change. *Basic Well Log Analysis* Editions TECHNIP "It's a fight against time." That is how

the book begins, presenting a historical background of how the topic of sustainable production and consumption was included in the global agenda and reached Brazil. It is clear in the work who and what the potential actors and instruments that interact for that purpose are. In a fun way, thematic infographics show the impact from consumption and production,

inspired by Life Cycle Assessment (LCA). In Chapters 2 and 3, readers will find inspiring examples of institutional procurement collected through exclusive interviews, news articles, corporate reports and scientific articles describing successful experiences in the public and private sectors, highlighting which institutions broke the resistance and became

protagonists in the use of transformation potential through sustainable consumption and production. In Chapter 4, under a guidance perspective, two tools are recommended for continuously improving management of public and business procurement - the former was developed by ICLEI, for the Procura+ campaign, and the latter by the UN Global Compact. Also,

propositions are presented in order to incorporate sustainability attributes in the procurement and supply management systems. Based on our experiences with consultancies and projects in partnership with governments, business platforms and academic researches, a survey was conducted with about 50 institutions, among public bodies and businesses, organizing lessons learnt and calling attention for facilitators and barriers of institutional consumption aimed at sustainability. Among the institutions we surveyed, we picked up the examples described in this work. Finally, in Chapter 5, under an integrated perspective of sectors and actors, including individual consumers, we made a critical analysis of the advancements and challenges faced in the past years, and point to guidelines for the future of the so-wanted 'inclusive green economy', considering institutional procurement as an essential tool to (re)build a global scenario that is more favorable to sustainable development.
