 How do you tailor education to the learning needs of adults? Do they learn differently from children? How does their life experience inform their learning processes? These were the questions at the heart of Malcolm Knowles' pioneering theory of andragogy which transformed education theory in the 1970s. The resulting principles of a self-directed, experiential, problem-centred approach to learning have been hugely influential and are still the basis of the learning practices we use today. Understanding these principles is the cornerstone of increasing motivation and enabling adult learners to achieve. The 9th edition of *The Adult Learner* has been revised to include: Updates to the book to reflect the very latest advancements in the field. The addition of two new chapters on diversity and inclusion in adult learning, and andragogy and the online adult learner. An updated supporting website. This website for the 9th edition of *The Adult Learner* will provide basic instructor aids. For each chapter, there will be a PowerPoint presentation, learning exercises, and added study questions. Revisions throughout to make it more readable and relevant to your practices. If you are a researcher, practitioner, or student in education, an adult learning practitioner, training manager, or involved in human resource development, this is the definitive book in adult learning you should not be without.

Double-entry bookkeeping (DEB), modern capitalism's first and foremost calculative technology, was "invented" during the Middle Ages when profit making was morally stigmatized. James Aho examines the problematic of moneymaking and offers an explanatory understanding of the paradoxical coupling of profit seeking and morality by situating DEB in the religious circumstances from which it emerged, specifically the newly instituted sacrament of penance, that is, confession. Confession impacted the consciences of medieval businessmen both through its sacramental form and through its moral teachings. The form of confession produced widespread habits of moral scrupulosity (leading to compulsive record keeping); the content of confession taught that commerce itself was morally suspect. Scrupulous businessmen were thus driven to justify their affairs to church, commune, and themselves. With the aid of DEB, moneymaking was "Christianized" and Christianity was made more amenable to the pursuit of wealth. Although DEB is typically viewed exclusively as a scientifically neutral account of the flow of money through a firm, it remains as it was originally devised, a rhetorical argument.

"In the quarter century that followed American entry into World War II, the nation's armed forces moved from the reluctant inclusion of a few segregated Negroes to their routine acceptance in a racially integrated military establishment. Nor was this change confined to military installations. By

the time it was over, the armed forces had redefined their traditional obligation for the welfare of their members to include a promise of equal treatment for black servicemen wherever they might be. In the name of equality of treatment and opportunity, the Department of Defense began to challenge racial injustices deeply rooted in American society. For all its sweeping implications, equality in the armed forces obviously had its pragmatic aspects. In one sense it was a practical answer to pressing political problems that had plagued several national administrations. In another, it was the services' expression of those liberalizing tendencies that were permeating American society during the era of civil rights activism. But to a considerable extent the policy of racial equality that evolved in this quarter century was also a response to the need for military efficiency. So easy did it become to demonstrate the connection between inefficiency and discrimination that, even when other reasons existed, military efficiency was the one most often evoked by defense officials to justify a change in racial policy."_x000D_ Morris J. MacGregor, Jr., received the A.B. and M.A. degrees in history from the Catholic University of America. He continued his graduate studies at the Johns Hopkins University and the University of Paris on a Fulbright grant. Before joining the staff of the U.S. Army Center of Military History in 1968 he served for ten years in the Historical Division of the Joint Chiefs of Staff.

This book contains a number of papers presented at a workshop organised by the World Bank in 1997 on the theme of 'Social Capital: Integrating the Economist's and the Sociologist's Perspectives'. The concept of 'social capital' is considered through a number of theoretical and empirical studies which discuss its analytical foundations, as well as institutional and statistical analyses of the concept. It includes the classic 1987 article by the late James Coleman, 'Social Capital in the Creation of Human Capital', which formed the basis for the development of social capital as an organising concept in the social sciences.

Few themes have been as central to sociology as 'class' and yet class remains a perpetually contested idea. Sociologists disagree not only on how best to define the concept of class but on its general role in social theory and indeed on its continued relevance to the sociological analysis of contemporary society. Some people believe that classes have largely dissolved in contemporary societies; others believe class remains one of the fundamental forms of social inequality and social power. Some see class as a narrow economic phenomenon whilst others adopt an expansive conception that includes cultural dimensions as well as economic conditions. This 2005 book explores the theoretical foundations of six major perspectives of class with each chapter written by an expert in the field. It concludes with a conceptual map of these alternative approaches by posing the question: 'If class is the answer, what is the question?'

This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.
