woman with left breast cancer received 18 F-FDG PET/CT for initial staging, and 18 F-FDG-avid lymph nodes were observed in the bilateral axillae. As estrogen receptor (ER) status of primary lesion was positive, the patient also received 18 F-fluoroestradiol (18 F-FES) PET/CT. Unlike primary lesion, no remarkable 18 F-FES uptakes in the lymph nodes were observed. 18F-Fluoroestradiol PET/CT Correctly Diagnosed 18F-FDG ...Estrogen receptor (ER) expression in breast

cancer is associated with a more favorable prognosis and necessary for response to endocrine therapies. Traditionally, ER expression is 18F-Fluoroestradiol PET: Current Status and Potential ...Footnotes. Published online Jun. 15, 2016. Learning Objectives: On successful completion of this activity, participants should be able to describe (1) the biology and pharmacokinetics of 18 F-fluoroestradiol; (2) the current experience with 18 F-fluoroestradiol in

patient studies on breast cancer and other diseases; and (3) potential clinical applications and the possible future clinical use ...18F-Fluoroestradiol PET: Current Status and Potential ...We measured regional estrogen-ER binding using Positron Emission Tomography with 18 F-fluoroestradiol (FES PET) prior to and during treatment with AI, TAM, or FUL in a series of 30 metastatic breast cancer patients. FES PET measured in vivo estrogen binding at all tumor sites in heavily

pretreated women with metastatic bone soft tissue dominant ...Fluoroestradiol (FES) Positron Emission Tomography (PET ...To evaluate the clinical value of 16 α -[18F]fluoroestradiol (18F-FES) PET/CT in assisting the individualized treatment decisions of breast cancer patients. Methods Thirty-three breast cancer patients, who underwent both 18F-FES and 18F-FDG PET/CT from July 2010 to March 2013 in our center, were enrolled in this
