Lavishly illustrated with full-colour digital photography, this is the inside story of the car designed to replace the iconic Porsche 911.
Strategic Brand Management Gestalten
This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare

and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers

with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Prabhat Prakashan
High speed catamaran and multihull high speed marine vessel have become very popular in the last two decades. The catamaran has become the vessel of choice for

the majority of high speed ferry operators worldwide. There have been significant advances in structural materials, and structural design has been combined with higher power density and fuel efficient engines to deliver ferries of increasing size. The multihull has proven itself to be a suitable configuration for active power projection across oceans as well as for coastal patrol and protection, operating at high speed for insertion or retrieval with a low

energy capability. At present there is no easily accessible material covering the combination of hydrodynamics, aerodynamics, and design issues including structures, powering and propulsion for these vehicles. Coverage in High Speed Catamarans and Multihulls includes an introduction to the history, evolution, and development of catamarans, followed by a theoretical calculation of wave resistance in shallow and deep water, as well as the drag

components of the multihull. A discussion of vessel concept design describing design characteristics, empirical regression for determination of principal dimensions in preliminary design, general arrangement, and methods is also included. The book concludes with a discussion of experimental future vehicles currently in development including the small waterplane twin hull vessels, wave piercing catamarans, planing catamarans,

tunnel planing
catamarans and other
multihull vessels.

Now in its sixth edition,
Explore Australia by
Caravan and Motorhome
has everything you need
to know about caravan
and motorhome trips in
Australia, whether it's the
dream lap or just
excellent weekends away.
This ever-popular
caravanning bible has
been completely revised
and updated, with details
on the routes to take, the
best things to see and the
most stunning places to
park your caravan,
wherever you want to
travel in Australia. To
make it even easier to

find the best place to stay, each section now contains a list of the greatest caravan parks specially curated by the author. Every listing contains handy symbols that have all the important information, such as whether the park is dog-friendly or has a dump point available. There are also symbols to make it easy to see at a glance if a park is a member of a major caravan organisation (BIG4, Top Tourist Parks, Family Parks and Kui Parks). There's also a

detailed guide to preparing yourself, and your caravan or motorhome, for time on the road with tips on packing, safety, towing and how to find the best camps and the cheapest fuel.

Hydrogen and Fuel Cells Independently Published

"This booklet is a general guide about what is in the test, not a book of road rules. For more detailed information on road rules refer to the Road Users' Handbook or the Australian Road Rules."--

No automobile is more recognizable than the Volkswagen Beetle. Introduced as an affordable motor vehicle for postwar Germany, the little Beetle grew to iconic status in both the automotive world and the world of pop culture. This year-by-year, full-color tribute to the "People's Car" begins with the first models in 1945 and goes on to cover the Beetle's

33-year production run in Germany, it's continued manufacture in Mexico starting in 1978, and the introduction in Spring 1998 of the New Beetle -- a car that reasserted the model's popularity, posted remarkable sales and, like its forebear, transcended the automotive world to become a pop culture sensation.

The rapid takeoff of the

continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties.

Motivation Journal Bay View Books Limited
Modern economies

depend on innovation in services for their future growth. Service innovation increasingly

depends on information technology and digitization of information processes. Designing new services is a complex matter, since collaboration with other companies and organizations is necessary. Service innovation is directly related to business models that support these services, i.e. services can only be successful in the long run with a viable business model that creates value for its customers and providers. This book presents a

theoretically grounded yet practical approach to designing viable business models for electronic services, including mobile ones, i.e. the STOF model and – based on it – the STOF method. The STOF model provides a ‘holistic’ view on business models with four interrelated perspectives, i.e., Service, Technology, Organization and Finance. It elaborates on critical design issues that ultimately shape the business model and drive its viability.

Steering one of the world's largest carmakers into the future, one man is taking an artistic and audacious approach to mobility. This is his story.

A Successful Transformation? Simon and Schuster

The astonishing biography of Josef Ganz, a Jewish designer from Frankfurt, who in May 1931 created a revolutionary small car: the Maikäfer (German for “May bug”). Seven years later, Hitler introduced the Volkswagen. The Nazis not only “took” the concept of Ganz's family

car—their production model even ended up bearing the same nickname. The Beetle incorporated many of the features of Ganz's original Maikäfer, yet until recently Ganz received no recognition for his pioneering work. The Nazis did all they could to keep the Jewish godfather of the German compact car out of the history books. Now Paul Schilperoord sets the record straight. Josef Ganz was hunted by the Nazis, even beyond Germany's borders, and narrowly

escaped assassination. He was imprisoned by the Gestapo until an influential friend with connections to Göring helped secure his release. Soon afterward, he was forced to flee Germany, while Porsche, using many of his groundbreaking ideas, created the Volkswagen for Hitler. After the war, Ganz moved to Australia, where he died in 1967.

This is a brilliant

examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck

industries.

The best years of the automobile lie before us. But it will be a new kind of car and a new kind of automotive experience. There will be a new powertrain dominating the motoring world. Driving will gradually be ceded to the on-board electronics, and, in response, interiors will become more luxurious and sociable. The car will connect with other cars, and infrastructure, a community and ecology of

mobility. Brave New Car outlines the possibilities, and opportunities, that lie before us. A premium quality book for the professional, student, and enthusiast alike, Brave New Car is sure to challenge and inspire new thinking in the automotive world and beyond.

This handbook is an important and valuable source for engineers and researchers in the area of internal combustion engines pollution control.

It provides an excellent updated review of available knowledge in this field and furnishes essential and useful information on air pollution constituents, mechanisms of formation, control technologies, effects of engine design, effects of operation conditions, and effects of fuel formulation and additives. The text is rich in explanatory diagrams, figures and tables, and includes a considerable number of references. An important resource for engineers and

researchers in the area of internal combustion engines and pollution control Presents and excellent updated review of the available knowledge in this area
Written by 23 experts
Provides over 700 references and more than 500 explanatory diagrams, figures and tables
