Bridge the gap between pathophysiology and clinical medicine in a succinct outline of core internal medicine topics! Originally created and road-tested by a resident and then updated by a team of resident authors, Huppert's Notes succinctly organizes the foundational science covered early in medical school and the clinical approaches encountered in clerkships and beyond. This marriage of pathophysiology and clinical medicine provides a framework for how to approach internal medicine concepts mechanistically, rather than through memorization. You'll find concise descriptions of common medical conditions with diagnostic and management pearls, as well as high-yield diagrams and tables to emphasize key concepts. Covering all internal medicine subspecialties, each Huppert's Notes chapter is organized in an intuitive and consistent outline format for rapid access: Anatomy & Physiology Diagnostics Approaches & Chief Complaints Diseases & Pathophysiology Key Medications &

*The Actions and Uses of Ophthalmic Drugs* McGraw Hill Professional

The Actions and Uses of Ophthalmic Drugs, Third Edition discusses the application and discrimination in the use of ophthalmic drugs. The book reviews the general pharmacological principles

including drug nomenclature, pharmacological classification, pharmacokinetics, pharmacodynamics, and the use of these drugs. Ophthalmic drugs (cycloplegics, mydriatics, miotics) directly or indirectly, stimulate or inhibit a part of the autonomic nervous system connected to the intra-ocular muscles. The text investigates in detail the structure and function of this involuntary nervous system in the orbital region as it is affected by these drugs. The book explains the different drug classifications, their therapeutic and diagnostic purposes, including the ideal properties, indications, contra-indications, mode of action, or adverse effects of cycloplegics, of mydriatics, and of miotics. The book also describes the uses and characteristics of local anesthetics, stains, anti-infective agents, and miscellaneous agents (antihistamines, vasoconstrictors). The text explains the different types of contact lens solutions, application of ocular first aid, as well as, the possible adverse ocular reactions that can occur during ophthalmic drug therapy. This book is suitable for optometrists, pharmacists, pharmacologists, students and professors related to the discipline of optometry and general medicine.
