Personal life narratives can serve as a rich source of new insights into the experience of human aging. In this comprehensive volume, an international team of editors and contributors provide effective approaches to using biography to enhance our understanding of adult development. In addition to providing new theoretical aspects on aging and biography, the book also details new developments concerning the practical use of different biographical approaches in both research and clinical work. This is a landmark volume advancing the use of narrative approaches in gerontology.

A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing

construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

This work collates the information on the advances made in the control of pests of tropical food legumes, namely the cowpea, soybean, groundnut, pigeon pea and other beans. Contributors are entomologists from the IITA, the International Center of Tropical Agriculture (CIAT), the International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) and researchers working in Africa, Latin America and Asia. An introduction from the USDA covers the general morphology, ecosystems, regions, distributions and uses of the crops. Chapters discuss field and storage pests, examining the taxonomy, identification, biology and bionomics, geographical distribution, status, damage symptoms and control measures for each pest covered. Also features a chapter on virus vectors and transmission of viruses and suggests strategies for future control and management of insect pests.

The Elements of Style William Strunk concentrated on specific questions of usage—and the cultivation of good writing—with the recommendation "Make every word tell"; hence the 17th principle of composition is the simple instruction: "Omit needless words." The book was also listed as one of the 100 best and most influential books written in English since 1923 by Time in its 2011 list.

The history of psychiatry is complex, reflecting diverse origins in mythology, cult beliefs, astrology, early medicine, law religion, philosophy, and politics. This complexity has generated considerable debate and an increasing outflow of historical scholarship, ranging from the enthusiastic meliorism of pre-World War II histories, to the iconoclastic revisionism of the 1960s, to more focused studies, such as the history of asylums and the validity and efficacy of Freudian theory. This volume, intended as a successor to the centennial history of American psychiatry published by the American Psychiatric Association in 1944, summarizes the significant events and processes of the half-century following World War II. Most of this history is written by clinicians who were central figures in it. In broad terms, the history of psychiatry after the war can be viewed as the story of a cycling sequence, shifting from a predominantly biological to a psychodynamic perspective and back again -- all presumably en route to an ultimate view that is truly integrated -- and interacting all the while with public perceptions, expectations, exasperations, and disappointments. In six sections, Drs. Roy Menninger and John Nemiah and their colleagues cover both the continuities and the dramatic changes of this period. The first four sections of the book are roughly chronological. The first section focuses on the war and its impact on psychiatry; the second reviews postwar growth of the field (psychoanalysis and psychotherapy, psychiatric education, and psychosomatic medicine); the third recounts the rise of scientific empiricism (biological psychiatry and nosology); and the fourth discusses public attitudes and perceptions of public mental health policy, deinstitutionalization, antipsychiatry, the consumer movement, and managed care. The fifth section examines the development of specialization and differentiation, exemplified by child and adolescent psychiatry, geriatric psychiatry, addiction psychiatry, and forensic psychiatry. The concluding section examines ethics, and women and

minorities in psychiatry. Anyone interested in psychiatry will find this book a fascinating read.

This second edition text is designed to prepare nursing students to be advocates for the aging population in all practice settings. Information on demographics, active and dependent aging, and leadership and management skills has been expanded. More ethical issues are also covered in this edition, such as living wills, guardianship, and power of attorney. An instructor's guide is also available.

This work provides, in a single volume, up-to-date knowledge about every aspect of varicella zoster virus, herpes zoster and postherpetic neuralgia. The first edition of this book, published in 1993, received wide acclaim. In this new edition, Dr. Watson and Dr. Gershon are joined by outstanding authorities on the multiple facets of these diseases. This book encompasses the impressive amount of knowledge which has been accumulated in recent years and enriches the knowledge not only about this particular syndrome but about chronic pain in general. It is a valuable contribution to the literature on pain which deals with all the basic scientific information on the acute and chronic stages of herpes zoster as well as the recent exciting developments in the treatment of this affliction.

Renal Vascular Disease Cambridge University Press

This proceedings volume brings together the invited papers from the Respiratory Biomechanics Symposium of the First World Congress of Biomechanics held in La Jolla, California from August 3D-September 4, 1990. The respiratory system offers many opportunities to apply the different branches of traditional mechanics. Tissue deformations and stresses during lung expansion can be analyzed using the principles of solid mechanics. Fluid mechanical problems in the lung are unique. There is the matched distribution of two fluids, gas and blood, in two beautifully intertwined, branched conduit systems. The reversing flow of the gas phase presents different problems than the pulsatile flow of the non-Newtonian fluid that is the blood. On the smaller scale, there is the flux of fluids and solutes across the

capillary membrane. Finally, there is the problem of coupling fluid and solid mechanics to understand the overall behavior of the respiratory system. In this symposium, we have chosen to address the basic processes that contribute to the gas and fluid exchange functions of the lung. Section 1, Lung Tissue Mechanics, provides an historical background and, then, presents more recent work on the structure of the lung parenchyma, the mechanics of the tissue, and the effects of the bounding membrane, the visceral pleura.

The world's leading source of evidence-based guidance on caring for patients at the end of life. Featuring the content of the world's most widely read medical journal, plus completely new, never-before-published content. Perfect for medical students, trainees, and clinicians alike. Market / Audience Medical students: 18000/yr US, 250,000 global NP and PA students: 25,000/yr US, 50,000+ global IM and FP residents: 30,000 US, 60,000 global IM and FP clinicians: 140,000 US, 300,000+ global Palliative medicine: 3000 US Oncology: 20,000 US, 60,000 global Social workers About the Book In the tradition of the User's Guides to the Medical Literature, and The Rational Clinical Examination, JAMA/Care at the Close of Life is based on a widely successful series of articles appearing over the course of the last ten years in JAMA, the world's most widely read medical journal. The series is directed by Stephen McPhee, a leading authority of end of life care, and the chief editor of our market leading Current Medical Diagnosis and Treatment text. The articles in the series cover fundamental topics and challenges in caring for patients who have been given a terminal diagnosis. Featuring a strong focus on evidence-based medicine, and organized by clinical cases, the articles are widely read by faculty, medical students, and clinicians who, frankly, have not been given a solid educational experience on this very important medical issue. The book will be physically modeled after The Rational Clinical Examination, in a full color format that highlights the clinical cases. It will be well suited for use as a required or recommended textbook for medical, PA, and NO students, and as a clinical reference text for trainees and

practicing physicians and nurses. Key Selling Features Based on highly regarded content from the world's most widely read medical journal All content is completely updated, and extensive new, never-before-published content has been added Case-based, and evidence-based, so its a perfect fit for the way medical students and residents like to learn Focuses on practical, real-world issues for primary care physicians, and avoids esoteric issues of interest only to specialists in palliative care Full color format, modeled after the highly regarded Rational Clinical Examination Includes multimedia materials available on line: Power Point slides for teaching, and video interviews with patients in end-of-life care, so that faculty and students get supplemental resources for learning the art and science of care at the end of life Evidence-based guidance from the world's leading medical education and training until recently. Author Profile JAMA is the world's most widely read medical journal, and has a reputation for excellence in evidence-based medicine. Stephen McPhee has high visibility on account of his editorship of CMDT, and for his driving role in enhancing end of life care in medical education and training programs. He is: Professor of Medicine, UCSF School of Medicine, San Francisco CA

The purpose of this book is to describe the latest findings relating to biochemical and molecular pharmacology of the nervous system and phospholipids and to report the proceedings of the fourth symposium on phospholipids. These Symposia have been satellite meetings of the International Society for Neurochemistry. This meeting was held on May 26-29, 1985 in the Teatro Bibiena in Mantova, Italy. Preceding meetings were held in Cortona, Italy in 1975, in Birmingham, England in 1981, and in British Columbia, Canada in 1983. As was the case for the proceedings of those meetings, this volume presents information that is new and important from the researchers most involved in advancing our knowledge of the function of membranes and of lipid metabolism in the nervous system. The presence of phosphorus in the brain was reported in 1719 by Hensing at the University of Giessen in Germany. Tower! has translated this pioneering work. The rather long, philosophical preface contains the following paragraph. Regardless of what may be thought of this matter, the brain is certainly that part of the animate body in which that subtlest and most penetrating [substance] alone is received, so often circulated from the heart and cleansed by the remaining viscera, and firmly held where thereafter life flourishes and the motions of the lower parts endure.
