Speech-language pathologists and audiologists receive little formal training in dealing with the emotional issues that will confront clients who have communication disorders. The families of those clients also need support in addressing emotions concomitant with communication disorders. Often, the humanistic elements of treatment are superficially addressed, if at all. How therapists deal with these issues, however, has an enormous impact on the effectiveness of their clinical efforts. Luterman addresses this lack of attention to emotions. In addition to the expertise of trained, experienced counselors, the new edition of this popular book also discusses some of today's hot topics. These topics include how to work with the chronically ill and their families and the consequences of the advent of universal screening of newborns. Both issues are having an increasing impact on the dynamics of the therapist-client relationship and require greater sensitivity to the particular needs of the clients and their families.

What assessment tests are available to speech therapists? How are they best used? Originally published in 1993, *Assessment in Speech and Language Therapy* was designed to guide speech therapists in choosing the most appropriate assessments for evaluation, monitoring and intervention at the time. By providing guidance on defining the issues in assessment, it shows how to make sure that the process will produce a result relevant to the therapist's own needs and those of his or her clients. The major issues involved are discussed in detail, in particular how to make sure that assessments are relevant to individual needs. This title will be invaluable to all speech therapists and clinical psychologists working in this area.

Speech and language pathologists, like all professionals who claim to be scientific in their practice, make a public commitment to operate on the basis of knowledge derived in accordance with sound scientific standards. Yet students in communication disorders are given relatively little grounding in the fundamentals of science; indeed, they often receive implicit encouragement to rely on clinical wisdom. This pathbreaking text introduces the principles of critical scientific thinking as they relate to assessing communication problems, deciding about alternative approaches to intervention, and evaluating outcomes. The author provides many illustrative examples to help readers contextualize the ideas. Her clear presentation will help not only undergraduate and graduate students but also established professionals reason more effectively about what they are doing and why. Though the examples come from speech and language pathology, this illuminating and readable book

constitutes a valuable resource for all clinical practitioners.

Counseling in the field of communication disorders is an essential dimension of professional practice, but just what it entails is often a bit of a mystery. *Counseling in Speech-Language Pathology and Audiology: Reconstructing Personal Narratives* addresses this common concern of students and practitioners by illustrating how to integrate the concept of counseling into clinical practice. Replete with a variety of case studies, clinical guidelines, and actual transcripts of counseling interventions with clients and their families, as well as a practical "toolbox" of specific counseling methods, Dr. DiLollo and Dr. Neimeyer offer a comprehensive, novel, and empirically informed approach to counseling, applicable to a broad range of speech, language, swallowing, and hearing disorders. Incorporating a counseling paradigm has been shown to increase motivation, deepen learning, and sustain progress for clients and families. *Counseling in Communication Disorders: Facilitating the Therapeutic Relationship* by Cyndi Stein-Rubin and Beryl T. Adler, is an engaging textbook, written in a genuine and lively tone, so that the reader may easily relate to the material. The text provides a practical vehicle for speech-language pathology students, clinicians, clinical supervisors, and instructors to get to know themselves better and to integrate basic counseling attitudes and tools into their diagnostic and therapeutic programs. Inside *Counseling in Communication Disorders*, Stein-Rubin and Adler describe the importance of addressing a client's communication challenges by working with the whole person, as a human being, not as a communication disorder. By approaching clients with a counseling attitude that encourages the client's full participation in the treatment process, we then work together in partnership and as a powerful team. The content, techniques, and exercises within *Counseling in Communication Disorders* are rooted in evidence-based practice from

a variety of psychological, counseling, and coaching approaches, such as Humanistic Counseling, Listening and Language, Narrative Therapy, The Cognitive Behavioral Model (CBT), Solution-Focused Brief Therapy (SFBT), Positive Psychology, Neurolinguistic Programming (NLP), and Mindfulness training. Counseling in Communication Disorders also includes reflective questions, exercises, and suggestions to reinforce important concepts. To bring the content to life, real-life and clinical scenarios are interspersed throughout the text. It is well understood that speech-language pathology and audiology clinicians must understand deep listening and how to choose words that will have a positive impact on their client and families, but often overlooked is the personal development of the clinicians themselves. Counseling in Communication Disorders is a comprehensive guide on how to provide the necessary support and encouragement to clients and build self-esteem, while a major focus is the need for the clinicians to work on self before working on other. Counseling in Communication Disorders: Facilitating the Therapeutic Relationship is the first textbook of its kind to comprehensively cover both sides of the therapeutic relationship. Students and clinicians alike will appreciate this unique approach that addresses not only the counseling attitude that is vital to the growth and progress of clients, but also the self-awareness that guides the personal development of the clinician. Cognitive-Behavior Modification John Wiley & Sons

Why do many people with disorders of communication experience a sense of demoralization? Do these subjective experiences have any bearing on how such problems should be treated? How can professionals dealing with speech, language, hearing and other communication disorders analyse and respond to the subjective and relational needs of clients with such problems? In this book, authors in the fields of communication disorders analyse the psychological, social and linguistic processes and interactions that underpin clinical practice, from both client and clinician perspectives. The chapters demonstrate how it is possible to analyze and understand client-clinician discourse using qualitative research, and describe various challenges to establishing relationships such as cultural, gender and age differences. The authors go on to describe self-care processes, the therapeutic use of the self, and various psychological factors that could be important for developing therapeutic relationships. Also covered are the rarely considered topics of spirituality and transpersonal issues, which may at times be relevant to clinicians working with clients who have debilitating, degenerative and terminal illnesses associated with certain communication disorders. While this book is geared toward the needs of practicing and training speech, language and hearing clinicians, other professional such as teachers of the deaf, psychotherapists, nurses, and occupational therapists will find the ideas relevant, interesting and easily translatable for use in their own clinical practice.

Their Evolution, Pathology and Therapy Routledge

Originally published in 1942, this title was recognized as setting new standards in the scientific approach to speech problems. Much speech therapy in the past had been unsatisfactory because of its emphasis upon the purely mechanical aspects of the condition, while at the same time the purely psychological approach was not sufficient to lead to satisfactory and radical treatment either. In this title the author combines the two approaches and by setting out the basic pathology of the various conditions, he throws new light upon them. Today it can be read and enjoyed in its historical

context.

This book is an account of a personal journey through a research program. A number of people have helped guide my way. To them I am deeply grateful. Special thanks are offered to my students, whose constant stimulation and provocation were incentives to write this book. Moreover, in the belief that they would never show the initiative to put together a festschrift for me (Le., a book dedicated to someone for his contributions), I decided to do it myself. Several people cared enough to offer editorial criticisms, namely, Myles Genest, Barney Gilmore, Roy Cameron, Sherryl Goodman, and Dennis Turk. The reader benefits from their perspicacity. Finally, to my parents, who taught me to talk to myself, and to my family, without whose constant input this book would have been completed much sooner, but would have been much less fun, I dedicate this book. Neurogenic Communication Disorders Springer Science & Business Media

Counseling the Communicatively Disabled and Their Families: A Manual for Clinicians, Second

Edition, written by George H. Shames, emphasizes the development of specific interviewing and counseling skills for speech-language pathologists and audiologists, which is a requirement of ASHA's clinical certification standards. The book offers a clear, basic definition of counseling, then builds a picture of the multidimensional role of counseling in speech-language pathology and audiology using anecdotal references to clinical cases. Among the changes in the Second Edition, Dr. Shames, a licensed speech-language pathologist as well as a licensed clinical psychologist, has expanded the theoretical overviews that ground the "learning by doing" skill development feature of this updated edition. Practicing clinicians and students in communication disorders programs, in addition to social workers and clinical psychologists, will find this book invaluable to their training as

focused, helpful evaluators and counselors of the communicatively disabled. It will also apply to training in other contexts and circumstances wherein counseling is appropriate.
