On the Stroke of Goodnight Oxford University Press

On February 19th, 2011, Frank Hegyi's daughter noticed him staring fixedly at his newspaper, with a vacant look in his eyes. What she was witnessing was the sudden impact of a cerebral stroke that would change his life forever. In a moment, Hegyi was transformed from a thriving academician, professional and family man to a patient struggling first just to live, then to regain the basic capacities of movement and language that his wife had been told by doctors would never return. This is the story of Hegyi's battle to overcome the debilitating effects of his stroke. But it is not a book just for those who have experienced strokes personally or in a loved one: it is a book that will inspire ANYONE with the courage and determination available to all of us to triumph over even the greatest adversities.

STROKE REBEL is the story of how Linda, an entrepreneur and former model is fighting her way back to living life successfully after a massive stroke at a young age. Linda's story serves as a blueprint and source of realistic hope for stroke survivors. In April 2016, she suffered a massive stroke at the age of 43, which turned her life upside down. Unfortunately, a blood clot was treated too late and caused extensive damage to the right side of her brain. The stroke left her completely paralyzed on her left side and unable to speak. The doctors could not provide any answers about whether or not she would regain use of her left arm and leg, or talk again. Linda's road to recovery looked bleak. The process was long, stressful, painful, and filled with setbacks. She had to deal with neuropathic pain so severe that she contemplated giving up on life. In a recent interview, she shared, "That was absolute rock bottom. At that point, I made a decision-- to fight and become 'a warrior and a rebel' in my own life, and find ways to help other stroke survivors." Doctors told Linda that

the six months following her stroke were critical. For Linda, six months was a mental ticking time bomb. But they were also a point of reference from where she had to move forward to take her life back. Linda uncovered a wealth of knowledge that she would later use to help her on the path to recovery. With these new insights, she began to tap into her brain and physical capacity to enable the maximum amount of improvement. In her quest for recovery, she met Arjan Kuipers, who specializes in applied clinical neuroscience. They joined forces to create worldwide home training and tools for stroke survivors and those with brain injuries. Before the stroke, Linda labeled herself a "control freak" and a "workaholic." Now she perceives herself as an ongoing experiment of neuroplasticity. She has made tremendous progress and is still recovering every day.

Dr. Ron Graham was trained as an engineer, and worked for NASA for more than 12 years. He received further training as an educator and taught in secondary schools for three years, and on the college level for eight. He was bullied throughout his youth, and ultimately found No Such Thing as a Bully - an organization in which he is now a partner - to have the answers to ongoing bullying problems. Dr. Ron suffered, and recovered from a stroke in 2012. The stroke paralyzed his right side, and through therapy he relearned basic functions, leading to a nearly 100% complete recovery. On the way, he underwent a transformation in his character, moving from doubt and bitterness to confidence and positivity. This book documents his recovery and what he learned from it. Much of what he learned may be available to nearly any stroke patient.

Welcome to my book, this is my story and observations of when I suffered and survived a life threatening major stroke in my mid forties not so long ago. It is a 100% frank account with no elaboration. Those who know me will know and understand my turn of phrase anyway and hopefully this book sounds like me. The main reason for me writing this was during my recovery I was trying to get answers to my own personal questions which is very

frustrating, VERY! I have written this in my own words exactly how it happened for me. so if you, the reader, can identify with a chapter, a paragraph or even a phrase, something that can lift you or take away some frustration that you will feel at some point, then this book has done its job. This is my story, events, opinions, observations and thoughts from having the stroke, through my early and ongoing recovery and finishes with my 10km run for the Stroke Association less than three years later.

The intimate, life-affirming journey of recovery and rehabilitation from a major stroke, written by one of morning television's most beloved personalities Mark McEwen was at the top of his game and enjoying life when he suffered a stroke. After fifteen years on The Early Show, he had moved to Orlando to anchor the local news and spend more time with his family. While traveling, he experienced symptoms that led him to a hospital, where he was misdiagnosed with the flu. Two days later, on an airplane flight just hours before he finally collapsed, flight attendants and airport

staff dismissed his slurred speech and heavy sweating.

Misinformation not only delayed his treatment, but it also nearly cost him his life. Now, in a candid and moving memoir, America's beloved morning-show weatherman recalls his harrowing journey of rehabilitation from a massive stroke. After the Stroke traces his recovery in the aftermath of temporarily losing some of his greatest gifts- his talent as a public speaker, and his warm, witty exuberance-while his wife worked valiantly to care for their children as well as her seriously ill husband. Sharing an ultimately triumphant story, McEwen emerges as one of our most dynamic new crusaders for stroke victims and their families.
