The second edition classifies all decisions made by any business into three groups: decisions on where to invest the resources or funds that the business has raised, decisions on where and how to raise funds to finance these investments, and decisions on how much and in what form to return funds back to the owners. All sections of the book are traceable to this framework. Also, four very different firms are used as examples throughout the text to illustrate the universality of corporate financial principles across different firms in different markets and across different types of decisions.

A lifeboat job is one individuals need to find NOW in order to keep themselves financially afloat in difficult times. It's essentially a survival job - not one that necessarily leads to an exciting career or high wages. It's all about meeting the necessities of life and becoming self-sufficient on the outside. Ex-offenders know all too well the importance of lifeboat jobs. Being released from prison or jail without money, a job, or family support, and facing immediate housing, clothing, food, and transportation needs - as well as probation and parole reporting requirements - they need to quickly land a job near where they live. The authors reveal how anyone with a stable work history and marketable skills can quickly find a job close to home by using an arsenal of unconventional job search strategies and techniques that get the attention of prospective employers. Indeed, they outline the fastest, most effective job hunting system anywhere for finding employment. The book includes three unique principles for job search success: Talent Intersecting Opportunity (TIO) Principle; Talent and Geography (TAG) Principle; 30-Mile Placement Principle. Filled with step-by-step advice on everything from identifying employers, writing resumes, and composing emails to leaving voicemail messages, interviewing, and follow-up over a 30-day period, here is the book

Obedience to Authority John Wiley & Sons

With acquisition activity running into the trillions of dollars, it continues to be a favorite for corporate growth strategy, but creating shareholder value remains the most elusive outcome of these corporate strategies—after decades of research and billions of dollars paid in advisory fees, why do these major decisions continue to destroy value? Building on his groundbreaking research first cited in Business Week, Mark L. Sirower explains how companies often pay too much—and predictably never realize the promises of increased performance and competitiveness—in their quest to acquire other companies. Armed with extensive evidence, Sirower destroys the popular notion that the acquisition premium represents potential value. He provides the first formal and functional definition for synergy -- the specific increases in performance beyond those already expected for companies to achieve independently. Sirower's refreshing nuts-and-bolts analysis of the fundamentals behind acquisition performance cuts sharply through the existing folklore surrounding failed acquisitions, such as lack of "strategic fit" or corporate culture problems, and gives managers the tools to avoid predictable losses in acquisition decisions. Using several detailed examples of recent major acquisitions and through his masterful integration and extension of techniques from finance and business strategy, Sirower reveals: -The unique business gamble that acquisitions represent -The managerial challenges already embedded in current stock prices -The competitive conditions that must be met and the organizational cornerstones that must be in place for any possibility of synergy -The precise Required Performance Improvements (RPIs) implicitly embedded in acquisition premiums and the reasons why these RPIs normally dwarf realistic performance gains -The seductiveness and danger of sophisticated valuation models so often used by advisers The Synergy Trap is the first exposé of its kind to prove that the tendency of managers to succumb to the "up the ante" philosophy in acquisitions often leads to disastrous ends for their shareholders. Sirower shows that companies must meticulously plan—and account for huge uncertainties—before deciding to enter the acquisition game. To date, Sirower's work is the most comprehensive and rigorous, yet practical, analysis of the drivers of acquisition performance. This definitive book will become required reading for managers, corporate directors, consultants, investors, bankers, and academics involved in the mergers and acquisitions arena.

Systems and Decision Making A Management Science Approach Hans G Daellenbach University of Canterbury, Christchurch, New Zealand Traditional methods of problem solving, based on the cause-and-effect model, can no longer cope with the complex situations in which decisions have to be made today. These problem situations occur within a systems context. Most of these systems are created and controlled by humans and it is, therefore, important that decision making is guided by a systematic and comprehensive methodology that helps the decision maker to make effective use of his/her extensive but limited powers of reasoning. Systems and Decision Making combines contemporary systems work with Operations Research (OR). Daellenbach places an emphasis on developing a methodology for decision situations that lend themselves to quantitative approaches rather than give an elementary survey of many OR/MS techniques. It incorporates some of the learnings of soft systems methodology for more practical problem solving, particularly at the problem identification and formulation stages. The text also shows that the scientific component of modelling can be considerably enhanced by the use of various diagrammatic devices. The second part of the book studies a number of topics important for the analyst, such as how to deal with the time element, with constraints, with uncertainty, and with multiple goals. These are demonstrated by various OR/MS techniques. Systems and Decision Making is an excellent core text for undergraduate and graduate students of systems, management science and MBA courses.
