 "Physics" 2nd edition is an alternate version of the "College Physics" 3rd edition text by Giambattista/Richardson/Richardson. The key difference is that "Physics" covers kinematics and forces in the more traditional organization of beginning with Kinematics and proceeding to forces. ("College Physics" takes an integrated approach to forces and kinematics, introducing forces and interweaving kinematics.)

There is a Language of Creation, within which we all exist, whether a sun, a tiger, or a human being... this language carries our Original Design. The flower opening toward the sun... is that language. The spiritual feeling of being one with God... is that language. The smile on a mother's face when her infant is placed in her arms... is that language. The tears in our eyes when we feel heard or feel seen... are that language. Over the course of time, we have forgotten. But now, once again, something is stirring. And we are Awakening... We are in the midst of a phenomenal global shift. We are awakening to the discovery that much of what we have believed until now, in fact, isn't true. Awakening is no longer secreted away in unconventional thinking. Awakening is what is happening. We just had no idea it would look or feel like it does. We have mistaken awakening for overwhelm, physical exhaustion, mental confusion, emotional anxiety. What we are experiencing, the old systems of understanding cannot sort out. Our minds and bodies are awakening into the Language of

Creation. Our entire system is actively restoring this Original Design. We are beginning to remember, once again, that we are an integral part of life. New perceptions and applications are now demanded. After eons of time, we are in a powerful creative process as our Original Design reformats our minds, re configures our bodies, and reboots our physical and non-physical systems. This book is a road-map to navigate your path to your Original Design. Through the use of template-writing exercises you reconfigure your neural pathways to be life-enhancing rather than life-defeating, manifesting your life in the majesty of what it was always meant to be. The Language of Creation is a tool for re-formatting HOW you think to create the life you want.

Tensors, Relativity, and Cosmology, Second Edition, combines relativity, astrophysics, and cosmology in a single volume, providing a simplified introduction to each subject that is followed by detailed mathematical derivations. The book includes a section on general relativity that gives the case for a curved space-time, presents the mathematical background (tensor calculus, Riemannian geometry), discusses the Einstein equation and its solutions (including black holes and Penrose processes), and considers the energy-momentum tensor for various solutions. In addition, a section on relativistic astrophysics discusses stellar contraction and collapse, neutron stars and their equations of state, black holes, and accretion onto collapsed objects, with a final section on cosmology discussing cosmological models, observational tests, and scenarios for the early universe. This fully revised and updated second edition includes new material on relativistic effects, such as the behavior of clocks and measuring rods in motion, relativistic addition of velocities, and the twin paradox, as well as new material on gravitational waves, amongst other topics. Clearly combines relativity, astrophysics, and cosmology in a single volume Extensive introductions to each section are followed by relevant examples and numerous exercises Presents topics of interest to those researching and studying tensor calculus, the theory of relativity, gravitation, cosmology, quantum cosmology, Robertson-Walker Metrics, curvature tensors, kinematics, black holes, and more Fully revised and updated with 80 pages of new material on relativistic effects,

such as relativity of simultaneity and relativity of the concept of distance, amongst other topics Provides an easy-to-understand approach to this advanced field of mathematics and modern physics by providing highly detailed derivations of all equations and results
