*A Case-based Approach* BoD - Books on Demand

E-waste management is a serious challenge across developed, transition, and developing countries because of the consumer society and the globalization process. E-waste is a fast-growing waste stream which needs more attention of international organizations, governments, and local authorities in order to improve the current waste management practices. The book reveals the pollution side of this waste stream with critical implications on the environment and public health, and also it points out the resource side which must be further developed under the circular economy framework with respect to safety regulations. In this context, complicated patterns at the global scale emerge under legal and illegal e-waste trades. The linkages between developed and developing countries and key issues of e-waste management sector are further examined in the

book.

*Microwave Oven Repair Made Easy* Pearson College Division

A revolutionary memoir about domestic abuse by the award-winning author of *Her Body and Other Parties* In the Dream House is Carmen Maria Machado's engrossing and wildly innovative account of a relationship gone bad, and a bold dissection of the mechanisms and cultural representations of psychological abuse. Tracing the full arc of a harrowing relationship with a charismatic but volatile woman, Machado struggles to make sense of how what happened to her shaped the person she was becoming. And it's that struggle that gives the book its original structure: each chapter is driven by its own narrative trope—the haunted house, erotica, the bildungsroman—through which Machado holds the events up to the light and examines them from different angles. She looks back at her religious adolescence, unpacks the stereotype of lesbian relationships as safe and utopian, and widens the view with essayistic explorations of the history and reality of abuse in queer relationships. Machado's dire narrative is leavened with her characteristic wit, playfulness, and openness to inquiry. She casts a critical eye over legal proceedings, fairy tales, Star Trek, and Disney villains, as well as iconic works of film and fiction. The result is a wrenching, riveting book that explodes our ideas about what a memoir can do and be.

Race, Gender and Image Restoration Theory: How Digital Media Change the Landscape explores themes that are relevant to the socio-political landscape of twenty-first-century America, including race and gender representation, social media and traditional media framing, and image restoration management.

*Congenital Cardiac Anesthesia* Beacon Press

An examination of the global trade and traffic in discarded electronics that reframes the question of the "right" thing to do with e-waste. The prevailing storyline about the problem of electronic waste frames e-waste as generated by consumers in developed countries and dumped on people and places in developing countries. In *Reassembling Rubbish*, Josh Lepawsky offers a different view. In an innovative analysis of the global trade and traffic in discarded electronics, Lepawsky reframes the question of the "right" thing to do with e-waste, mapping the complex flows of electronic materials. He counters the assumption that e-waste is a post-consumer problem, pointing out that waste occurs at all stages of electronic materials' existence, and calls attention to the under-researched world of reuse and repair. Lepawsky explains that there are conflicting legal distinctions between

electronic waste and non-waste, and examines a legal case that illustrates the consequences. He shows that patterns of trade do not support the dominant narrative of e-waste dumping but rather represent the dynamic ecologies of repair, refurbishment, and materials recovery. He asks how we know waste, how we measure it, and how we construe it, and how this affects our efforts to mitigate it. We might not put so much faith in household recycling if we counted the more massive amounts of pre-consumer electronic waste as official e-waste. Lepawsky charts the "minescapes," "productionscapes," and "clickscapes" of electronics, and the uneven "discardscapes" they produce. Finally, he considers both conventional and unconventional e-waste solutions, including decriminalizing export for reuse, repair, and upgrade; enabling ethical trade in electronics reuse, repair, refurbishment, and recycling; implementing extended producer responsibility; and instituting robust forms of public oversight.

As the title of the book implies, this book is written from the technician workbench point of view. No theories and long stories, therefore what is in this book is what you will expect first hand when a microwave oven is brought to your workshop for repair. The author, Humphrey Kimathi has over 20 years experience in repair and service of home electrical appliances. Microwave oven which was invented in 1958 by accident has become an household name as many families have adopted this mode of warming food in seconds. An increase for the use of this technology has come with the need

for personnel to service and maintain these gadgets. Unlike other home electrical appliances, microwave repair is the most dangerous, both to the user and service personnel. In this regard I have dedicated a full chapter on the safety around working on the microwave and also testing microwave leakage for the safety of the user before handing back the machine to the customer and also for the

service technician-SAFETY FIRST!
