International Studies in Educational Inequality, Theory and Policy
Routledge

Inequality is a marked and persistent feature of education systems, both in the developed and the developing worlds. Major gaps in opportunity and in outcomes have become more critical than in the past, thanks to the knowledge economy and globalization. The pursuit of equity as a goal of public policy is examined in this book through a series of national case-studies. The book covers many different global contexts from the wealthiest to some of the poorest nations on earth. It therefore offers a broad range of different theoretical and methodological approaches, and brings together extensive international experience in equity policy.

The Three Questions World Scientific

More than ten years have passed since the first edition was published. During that period there have been a substantial number of changes in geotechnical engineering, especially in the applications of foundation engineering. As the world population increases, more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used. Such areas include problematic soil regions, mining subsidence areas, and sanitary landfills. To overcome the problems associated with these natural or man-made soil deposits, new and improved methods of analysis, design, and implementation are needed in foundation construction. As society develops and living standards rise, tall buildings, transportation facilities, and industrial complexes are increasingly being built. Because of the heavy design loads and the complicated environments, the traditional design concepts, construction materials, methods, and equipment also need improvement. Further, recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost-saving methods for foundation design and construction.

-Half the boys living in working-class suburbs to the west and north of Melbourne fail mathematics. Why? -Why are so many young people leaving school early, when there are no jobs for them to go to? -Are boys disadvantaged at school in comparison with girls? -What makes good schools work? -Is the best university one that attracts the top students, or one that offers the best chances for lower-achieving students? This groundbreaking book is based on the largest social survey of secondary education ever undertaken in Australia. It presents a comprehensive picture of who succeeds and who fails at school. Undemocratic Schooling brings together a unique range of information on who our students are, what they want from school, how well they think their schools work, what subjects they study, how well they succeed, and where they end up. It also reveals their larger views on matters such as jobs, careers, marriage and family, the political system and social justice. In its imaginative presentation of the findings of this massive survey, this book sheds new light on inequalities in our education system. It reveals significant new information on: -students' achievements in relation to their attitudes and values -students' perspectives on issues from jobs to discrimination -students' destinations in relation to their backgrounds. The authors offer valuable angles on such topical issues as retention and dropout rates; the relation between poverty and achievement; the gender debate; private versus public schools; and which universities serve which social groups.
