### **Delay Analysis in Construction Contracts**

Thomas Telford  
Liquidated damages and extensions of time are complex subjects, frequently forming the basis of contract claims made under the standard building and civil engineering contracts. Previous editions of Liquidated Damages and Extensions of Time are highly regarded as a guide for both construction industry professionals and lawyers to this complex

area. The law on time and damages continues to develop with an increasing flow of judgments from the courts. Alongside this, the standard forms of contract have also developed over time to reflect prevailing approaches to contractual relationships. Against this background a third edition will be welcomed by construction professionals and lawyers alike. Retaining the overall approach of the previous editions, the author clarifies, in a highly readable but legally rigorous way, the many misunderstandings on time and damages which abound in the construction industry.

The third edition takes account of a large volume of new case law since the previous edition was published over ten years ago, includes a new chapter on delay analysis and features significantly expanded chapters on penalty clauses, the effects of conditions precedent and time-bars, and the complexities of causation.

**Concepts and Case Analysis in the Law of Contracts** John Wiley & Sons

ICE Conditions of Contract for

Archaeological Investigation Thomas Telford

Aimed at construction professionals, contractors and undergraduate and postgraduate students, this book confronts all of the difficult problems that arise in claims situations in the UK and internationally. Extensive reference to UK and international case law and a systematic approach to various types of claims, assisted by helpful and explanatory diagrams, make this book second to none as a 'trouble-shooting' guide to the presentation of, and response to, the negotiation and settlement of claims. This new edition considers in equal measure the latest editions of both NEC3 and JCT contracts and provides worked examples of claims under each. It also includes the latest revisions to the Housing Grants, Construction and Regeneration Act 1996 and the Scheme for Construction Contracts, which together make significant changes to payment and adjudication in the construction industry. Other key features: • A practical approach to solving contract claims including essential sections on claims presentation, delay analysis and non-productivity

calculations • An emphasis on dealing with factual evidence • Helpful spreadsheet examples • Up-to-date coverage of developments in competition law in relation to the public procurement regulations, and the impact of these requirements at tender stage • A book that will save professionals and contractors time and money, and prepare students for the reality of the construction industry

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing

homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Most civil engineering projects carried out in the UK which are concerned with the construction or maintenance of highways employ the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works. In order to maximise returns in construction works (or often, nowadays, to minimise losses) it is necessary for engineers, contractors and clients to have a full understanding of these documents, particularly those elements which have a financial connotation. Claims on highway contracts has been specifically written to explore those parts of the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works which are particularly important in the commercial aspects of highway contracts and to examine how they apply in claims situations. There have been many books written on claims by

lawyers which are full of legalese. Claims on highway contracts is the first, and only book which has been written by a practising engineer who works in this field and has experience of the claims minefield to provide advice in a practical and straightforward manner.

The first edition of the ICE Conditions of

Contract was launched in December 1945 and the subsequent editions have become one of the main form of standard contracts for UK civil engineering work. This new 7th edition has been drafted by Clients, Consultants, Contractors to provide a simple and standardised contract specifically tailored for civil engineering projects. It is been endorsed by the sponsoring bodies namely The Institution of Civil Engineers, The Association of Consulting Engineers and The Civil Engineering Contractors Association. The 7th edition is based on the traditional pattern of Engineer-designed, Contractor-built Works with valuation by measurement. It has, however, been revised and updated in line with the recommendations made by the Latham Review and fully supports and promotes the benefits of teamworking and current procurement initiatives propounded by the Egan report. If the procedures as set out in the Contract are followed, the parties to the Contract are provided with a co-operative form of contract that should prevent delays or give rise to additional costs at any stage of a Contract. Other major changes that have been

incorporated into the new 7th edition relate to: The Landfill Tax Regulations 1996 The Finance Act 1996 The Housing Grants, Construction and Regeneration Act 1996 The ICE Form of Default Bond This new 7th edition replaces all its predecessors, and like them it will become one of the main forms of contract for UK civil engineering works.

**A Practical Guide** Sweet & Maxwell  
Written by an engineer and construction lawyer with many years of experience, *The Application of Contracts in Engineering and Construction Projects* provides unique and invaluable guidance on the role of contracts in construction and engineering projects. Compiling papers written and edited by the author, it draws together a lifetime of lessons learned in these fields and covers the topics a practicing professional might encounter in such a project, developed in bite-sized chunks. Key topics included are: the engineer and the contract; the project and the contract; avoidance and resolution of disputes; forensic engineers and expert witnesses; and international construction contracts. The inclusion of numerous case studies to illustrate the importance of getting the

contract right before it is entered into, and the consequences that may ensue if this is not done, makes *The Application of Contracts in Engineering and Construction Projects* essential reading for construction professionals, lawyers and students of construction law.

200 Contractual Problems and their Solutions John Wiley & Sons  
Existing books on construction adjudication have either been written as an

introduction to the subject when the Housing Grants, Construction and Regeneration Act was first introduced in 1996, or they are aimed at professionals representing parties or at adjudicators themselves. In contrast, this book has been written for the parties to adjudication, particularly those new to the process. It takes a straightforward, practical approach to the subject, dealing with the process step-by-step. The first part takes a party who is referring a dispute through the stages of the adjudication process, including the presentation of a referral submission, to the enforcement of an award. Part 2 examines the position of a party faced with adjudication, highlighting the various actions necessary to protect its interest, and explains how a decision can be challenged. Part 3 looks at matters of common interest. Statutory payment provisions and the Scheme for Construction Contracts are dealt with in Part 4, and Part 5 compares the most frequently used adjudication provisions and procedures. Appendices include an alphabetical list of 139 adjudication cases which are also categorised to show the aspect or aspects

with which they are principally concerned.

 Adjudication has been the main means of settling construction disputes since it was first introduced by the Housing Grants, Construction and Regeneration Act 1996, and a substantial body of case law has now built up. This book established itself as the key authority on adjudication when it was first published. It has now been revised to reflect the authors' experience of adjudication in practice and to cover the large number of court decisions. It features useful appendices on adjudication materials.

Acclaimed as the standard reference work on the law relating to time charters, this new edition provides a comprehensive treatment of the subject, accessible and useful both to shipping lawyers and to

shipowners, charterers, P&I Clubs and other insurers. It provides full coverage of both English and U.S. law, now updated with all the important decisions since the previous edition. The English decisions covered in the new edition include: *The Kos* (the Supreme Court on the effect of withdrawing a ship with cargo on board); *The Athena* (nature of off-hire; meaning of 'loss of time'/'time thereby lost'); *The Kyla* (damage to ship and frustration); *The Silver Constellation*, *The Savina Caylyn* and *The Rowan* (oil company approval of chartered ships); *The Captain Stefanos*, *The Saldanha*, *The Triton Lark* and *The Paiwan Wisdom* (effects of piracy); *The Kildare* and *The Wren* (damages for early termination); *The T S Singapore* (off-hire where ship going 'towards but not to' the port ordered), and *The Lehmann Timber*, *The Bulk Chile* and *The Western Moscow* (owners' liens) The new edition also features many significant new U.S. decisions, including: *Stolt-Nielsen v. Animal Feeds Intl.* (Supreme Court rules class-action arbitration not permitted unless parties agree in arbitration agreement); *ATHOS I* (Circuit Court finds that safe berth provision in charterparty is

a warranty and not merely a due diligence obligation); The M/V SAMHO DREAM (arbitrators direct petitioner to post

\$14.2M security on respondent's counterclaim) and Maroc Fruit Board v. M/V VINSON (CP arbitration clause

incorporated in bill of lading not "signed" or "contained in an exchange of letters or telegrams" under NY Convention).
