*The Upcycle* BRILL

The concept of sustainability has grown in recognition and importance. The pressure on companies to broaden their reporting and accountability from economic performance for shareholders, to sustainability performance for all stakeholders is leading to a change of mindset in consumer behaviour and corporate policies. How can we develop prosperity without compromising the life and needs of future generations? Sustainability in Project Management explores and identifies the questions surrounding the integration of the concepts of

sustainability in projects and project management and provides valuable guidance and insights. Sustainability relates to multiple perspectives, economical, environmental and social, but also to responsibility and accountability and values in terms of ethics, fairness and equality. The authors will inspire project managers to be aware of these considerations, and to apply them to the role they play in projects, not just 'doing things right' but 'doing the right things right'.

**Empty Cradle** Courier Corporation

The tenth volume in the New York Times best-selling Cradle series! Sacred Valley has been saved...at least, what's left of it. With his home finally secure, Lindon delves deep into the ancient labyrinth, seeking long-lost Soulsmithing knowledge and the secret to destroying the Dreadgods. Monarchs plot against him

and against each other, unaware of the threats gathering in realms beyond. Far above Lindon and the Monarchs and the Dreadgods, another war is waged. Suriel and the Abidan clash against the Mad King and his forces in a battle for the fate of many worlds. And if it is lost, Cradle will be destroyed.

**Description** The Cradle series is a completed twelve-volume series now being published in trade paperback and trade hardcover for the first time. It is the best-selling example of the Progression Fantasy subgenre, which includes works of fantasy whose primary plot revolves around a character growing more powerful in their use of magic. Cradle is high-stakes, fast-paced, and action-focused, with minimal time dedicated to world-building, and as such the books are lean and focused. The series is often compared to anime, with fans emphasizing the story's specialty of loud and colorful super-powered battles along with lots of humor.

Small and medium-sized enterprises can serve as promising cradles for challenging ideas and pioneering initiatives. That is exactly what is required in order to make progress towards sustainable levels and patterns of production and consumption. Of all the continents of the world, Europe is most likely to lead the way towards a more sustainable relation with the environment. Having been the cradle of the industrialized world as we know it today, Europe again will lead the way in the journey of discovery to sustainable industrial practice, that is, if suitable conditions exist, and engaged and motivated entrepreneurs take the challenge and the role of the pioneer. Essential to these conditions is a set of values regarding the

availability and properties of resources, the functioning of products and the impact upon the environment, now and well into the future, in Europe as well as globally. Furthermore, imagination, information and encouragement will be essential. This manual provides ideas, tools, examples and guidance for small and medium-sized enterprises (SMEs) that wish to develop products with the environment and the future in mind. It addresses product development and design with consideration for the whole life cycle of the product. This cycle is a process ranging from the identification and formulation of a need at the early stage of product development to the disposal of the product, after repeated usage, at the end of its life. A particular focus has been given to principles and criteria in the design of complex products.

Every Cradle Is a Grave Routledge

READ ABOUT THE FASCINATING childhoods of over 700 famous people! The provocative classic by Victor and Mildred Goertzel is now back and printed in its entirety, plus updated for the 21st Century to include additional data from

Sustainability and the U.S. EPA Springer Science & Business Media

Imaginative and creative thought is what distinguishes humans from animals. It is what defines us as Homo sapiens. What it means to have thoughts, and what gives us the remarkable capacity to think, have been subjects of debate for centuries. In *The Cradle of Thought*, Peter Hobson presents a new and provocative theory about the nature and origins of uniquely human thinking. A prevailing opinion on the acquisition of thought and language is that babies are born with pre-

programmed modules in the brain. But this is too narrow and too simplistic an explanation. Professor Hobson's radical view is that what gives us the capacity to think is the quality of a baby's exchanges with other people over the first 18 months of life. As part and parcel of an intellectual revolution in the second year, the child achieves new insight into the minds of itself and others. Human thought, language, and self-awareness are developed in the cradle of emotional engagement between infant and caregiver; social contact has vital significance for mental development. Professor Hobson draws on 20 years of clinical experience and academic research as a developmental psychologist, psychiatrist and psychoanalyst. He follows the thread of mental development over the first 18 months of a baby's life to describe and to explain the emergence of thinking; he shares startling insights into mental development gained from his studies of autism; and he shows how, from infancy to adulthood, disturbances of thinking may be rooted in troubled early relationships. Finally, he pinpoints tiny but momentous changes in the social relations of pre-human primates from which human thought sprang. In this fascinating and thought-provoking book, Peter Hobson shows how very early engagement with others fosters the child's growth out of the cradle of infancy and into the realm of human thought and culture.

*Responsible Consumption and Production* Workman Publishing  
This unique title draws together in one volume some of the best thinking to date on the pressing social and environmental challenges we face as a society. These are the Top 50 Sustainability Books as voted for by the University of Cambridge Programme for Sustainability Leadership's alumni network of over

3,000 senior leaders from around the world. In addition to profiles of all 50 titles, many of the authors share their most recent reflections on the state of the world and the ongoing attempts by business, government and civil society to create a more sustainable future. Many of these authors have become household names in the environmental, social and economic justice movements – from Rachel Carson, Ralph Nader and E.F. Schumacher to Vandana Shiva, Muhammad Yunus and Al Gore. Others, such as Aldo Leopold, Thomas Berry and Manfred Max-Neef, are relatively undiscovered gems, whose work should be much more widely known. By featuring these and other seminal thinkers, *The Top 50 Sustainability Books* distils a remarkable collective intelligence – one that provides devastating evidence of the problems we face as a global society, yet also inspiring examples of innovative solutions; it explores our deepest fears and our highest hopes for the future. It is a must-read for anyone who wants to tap into the wisdom of our age.

#### **House of Blades** Dundurn

This book explores important chapters of past and recent African history from a multidisciplinary perspective. It covers an extensive time range from the evolution of early humans to the complex cultural and genetic diversity of modern-day populations in Africa. Through a comprehensive list of chapters, the book focuses on different time-periods, geographic regions and cultural and biological aspects of human diversity across the continent. Each chapter summarises current knowledge with perspectives from a varied set of international researchers from diverse areas of expertise. The book provides a valuable resource for scholars interested in evolutionary history and human diversity in Africa.

Contributors are Shaun Aron, Ananyo Choudhury, Bernard Clist, Cesar Fortes-Lima, Rosa Fregel, Jackson S. Kimambo, Faye Lander, Marlize Lombard, Fidelis T. Masao, Ezekia Mtetwa, Gilbert Pwiti, Michèle Ramsay, Thembi Russell, Carina Schlebusch, Dhriti Sengupta, Plan Shenjere-Nyabezi, Mário Vicente.

For fans of Conn Iggulden and Bernard Cornwell, a pulse-racing and dramatic new thriller from Sunday Times bestselling author James Jackson about the founding of America's first colony.

American was born in blood. 1607. With King James on the throne, thousands of miles away, in Virginia, the English have established Jamestown, a tiny foothold on a vast, untamed continent and a powerful symbol of their colonial ambition. But trouble is stirring. The settlement has the support of Prince Henry, but is despised by his jealous father, the King, who seeks to destroy it. Meanwhile, a ship arrives, harbouring Hardy's arch-enemy: the deadly renegade Realm. The battle for America has begun . . .

**The Big Sleep** Routledge

Sustainable Industrial Design and Waste Management was inspired by the need to have a text that enveloped awareness and solutions to the ongoing issues and concerns of waste

generated from industry. The development of science and technology has increased human capacity to extract resources from nature and it is only recently that industries are being held accountable for the detrimental effects the waste they produce has on the environment. Increased governmental research, regulation and corporate accountability are digging up issues pertaining to pollution control and waste treatment and environmental protection. The traditional approach for clinical waste, agricultural waste, industrial waste, and municipal waste are depleting our natural resources. The main objective of this book is to conserve the natural resources by approaching 100 % full utilization of all types of wastes by cradle - to - cradle concepts, using Industrial Ecology methodology documented with case studies. Sustainable development and environmental protection cannot be achieved without establishing the concept of industrial ecology. The main tools necessary for establishing Industrial Ecology and sustainable development will be covered in the book. The concept of "industrial ecology will help the industrial system to be managed and operated more or less like a natural ecosystem hence causing as less damage as possible to the surrounding environment. - Numerous case studies allow the reader to adapt concepts according to personal interest/field - Reveals innovative technologies for the conservation of natural resources - The only book which provides an integrated approach for sustainable development including tools, methodology, and indicators for sustainable development

**Cradle** Springer

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health

and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 12, namely "Ensure sustainable consumption and production patterns" and contains the description of a range of terms, which allows a better understanding and fosters knowledge. Concretely, the defined targets are: Implement the 10-Year Framework of Programmes on Sustainable Consumption and Production Patterns, all countries taking action, with developed countries taking the lead, taking into account the development and capabilities of developing countries Achieve the sustainable management and efficient use of natural resources Halve per capita global food waste at the retail and consumer levels and reduce food losses along production and supply chains, including post-harvest losses Achieve the environmentally sound management of chemicals and all wastes throughout their life cycle, in accordance with agreed international frameworks, and significantly reduce their release to air, water and soil in order to minimize their adverse impacts on human health and the environment Substantially

reduce waste generation through prevention, reduction, recycling and reuse Encourage companies, especially large and transnational companies, to adopt sustainable practices and to integrate sustainability information into their reporting cycle Promote public procurement practices that are sustainable, in accordance with national policies and priorities Ensure that people everywhere have the relevant information and awareness for sustainable development and lifestyles in harmony with nature Support developing countries to strengthen their scientific and technological capacity to move towards more sustainable patterns of consumption and production Develop and implement tools to monitor sustainable development impacts for sustainable tourism that creates jobs and promotes local culture and products Rationalize inefficient fossil-fuel subsidies that encourage wasteful consumption by removing market distortions, in accordance with national circumstances, including by restructuring taxation and phasing out those harmful subsidies, where they exist, to reflect their environmental impacts, taking fully into account the specific needs and conditions of developing countries and minimizing the possible adverse impacts on their development in a manner that protects the poor and the affected communities Editorial Board Medani P. Bhandari, Luciana Londero Brandli, Morgane M. C. Fritz, Ulla A. Saari, Leonardo L. Sta Romana  
*Sustainable Industrial Design and Waste Management* Springer Science & Business Media  
 Winner of the 1981 Bancroft Prize. Focusing primarily on the middle class, this study delineates the social, intellectual and psychological transformation of the American family from

1780-1865. Examines the emergence of the privatized middle-class family with its sharp division of male and female roles.

**You're Not Aging. . . You're Just Oxidizing** National Academies Press

This book highlights ten cases of entrepreneurship that – in the context of circular economy – have redefined the paradigm of luxury and the notion of exclusivity that it requires. It shows how, by using technology and a new consumption model, the ten companies have created novel business models for luxury, and more intelligent forms of use better-suited to modern times.

*RESTART Sustainable Business Model Innovation* Springer

Taking the business model as point of departure, this open access book explores how companies and organizations can contribute to a more sustainable future by designing innovative models that are both sustainable and profitable. Based upon years of research, it draws together theoretical foundations and existing literature on the topic of sustainable business alongside case studies and practical solutions. After examining the theoretical foundations of sustainable business model innovation, the authors present their own framework – RESTART. Consisting of seven factors, this framework can be the basis for restarting any business model. The final section outlines a research agenda for sustainable business informed by the perspectives and frameworks put forward in this book.

Describes and provides illustrations of the kinds of space exploration that may be done in the near future, and discusses the economic and political implications for the people of the earth  
String Figures and how to Make Them DigiCat

Two and a half centuries after the American Revolution the United States stands as one of the greatest powers on earth and the undoubted leader of the western hemisphere. This stupendous evolution was far from a foregone conclusion at independence. The conquest of the North American continent required violence, suffering, and bloodshed. It also required the creation of a national government strong enough to go to war against, and acquire territory from, its North American rivals. In *A Hercules in the Cradle*, Max M. Edling argues that the federal government's abilities to tax and to borrow money, developed in the early years of the republic, were critical to the young nation's ability to wage war and expand its territory. He traces the growth of this capacity from the time of the founding to the aftermath of the Civil War, including the funding of the War of 1812 and the Mexican War. Edling maintains that the Founding Fathers clearly understood the connection between public finance and power: a well-managed public debt was a key part of every modern state. Creating a debt would always be a delicate and contentious matter in the American context, however, and statesmen of all persuasions tried to pay down the national debt in times of peace. *A Hercules in the Cradle* explores the origin and evolution of American public finance and shows how the nation's rise to great-power status in the nineteenth century rested on its ability to go into debt.

Cat's Cradle Bonnier Publishing Fiction Ltd.

The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment, product development,

sustainable manufacturing and end-of-life-management. The theme “Glocalized Solutions for Sustainability in Manufacturing” addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products, services and processes taking into account local capabilities and constraints to achieve an economically, socially and environmentally sustainable society in a global perspective. Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product- and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering (LCE) 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

*The Cradle of the Aryans* Cambridge University Press

This edited volume presents the proceedings of the 20th CIRP LCE Conference, which cover various areas in life cycle engineering such as life cycle design, end-of-life management, manufacturing processes, manufacturing systems, methods and tools for sustainability, social sustainability, supply chain management, remanufacturing, etc.

**Reaper** North Point Press

Sustainability is based on a simple and long-recognized factual

premise: Everything that humans require for their survival and well-being depends, directly or indirectly, on the natural environment. The environment provides the air we breathe, the water we drink, and the food we eat. Recognizing the importance of sustainability to its work, the U.S. Environmental Protection Agency (EPA) has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision-making at the agency. To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection, the EPA asked the National Research Council (NRC) to provide a framework for incorporating sustainability into the EPA's principles and decision-making. This framework, *Sustainability and the U.S. EPA*, provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s. Although risk-based methods have led to many successes and remain important tools, the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk, such as depletion of natural resources, climate change, and loss of biodiversity. Moreover, sophisticated tools are increasingly available to address cross-cutting, complex, and challenging issues that go beyond risk management. The report recommends that EPA formally adopt as its sustainability paradigm the widely used “three pillars” approach, which means considering the environmental, social, and economic impacts of an action or decision. Health should be expressly included in the “social” pillar. EPA should also articulate its vision for

sustainability and develop a set of sustainability principles that would underlie all agency policies and programs.
