It's been said that, with smartphones, everyone is a photographer. There is a snide implication with that statement—that camera phones aren't "real" cameras and that the people who use them aren't "real" photographers. In this book, Robert Fisher proves that today's Android devices offer cameras that are remarkably powerful and more than capable of producing images that rival those made with more "serious" equipment. In this book, Fisher guides readers through the menus of the Android operating system, helping them to understand how to choose and use out-of-the-box controls for better images. Next, he covers add-on accessories and

applications designed to enhance the devices' capabilities. While the photographic capabilities of the "base" camera are pretty terrific and will meet with rave reviews from many users, the camera really produces images that sing when suited up with DSLR functions, filters, and postproduction effects—all of which Fisher covers with prowess and technical skill.

Fodor's Essential Israel Rawbertd

On every front, 24 hours a day, you and your wealth face threats of an intensity that would have been unimaginable only a few short years ago. A sinister marriage of law and technology has made the pervasive and continuous surveillance that

George Orwell warned of a reality. Identity thieves, greedy lawyers and the government have been quick to exploit this fast-evolving global surveillance network: - Data thieves can hijack your PC with easy-to-use hacking tools that even a 10-year old can master. After stealing your log-on passwords, they can drain your bank accounts. - If someone has a grudge against you, he can learn whether you're "worth suing" with a few clicks of a mouse. Hundreds of Web sites offer asset-tracking services to find your real estate ownership records, bank account balances, and much more. - Secret government data mining programs monitor your personal and financial activities

24 hours a day for "suspicious transactions." One oversight--becoming friends on Facebook with a suspected terrorist, withdrawing too much cash, unknowingly renting property to someone with a criminal background, etc.--and you could find yourself under arrest and your assets frozen. . Fortunately, you CAN fight back. You can secure your PC to make it virtually invulnerable to hackers. You can legally create international "lifeboats" of wealth and privacy that are practically invulnerable to snooping. You can understand what the government regards as suspicious ... and avoid raising your profile unnecessarily. The

Lifeboat Strategy (2011) shows you exactly what you need to do to counter today's threats to wealth and privacy. It documents today's unprecedented threats to wealth and privacy and reveals hundreds of completely legal strategies to deal with them: private investments, opportunities, and strategies inside--and outside--the United States. And, it's written in language you can understand and put to work to protect yourself and your family. Special bonus report accompanying The Lifeboat Strategy (2011): How to Find Your Own Safe Haven Offshore. In this report, you you'll learn: - The 11 countries best suited for wealth preservation - Which

countries offer the most to prospective immigrants? - How to legally purchase a second passport-and why you might want to. - In the current economic crisis, which "asset havens" will survive--or not? As the U.S. dollar collapses and the world moves into fiscal chaos, planning your own "escape from America" has never been more important. And this free special bonus report shows you, step-by-step, how to proceed.
