text, carefully selected and clearly presented practical investigations in many of the units, appendices providing basic information and techniques relating to the relevant areas of the physical sciences and mathematics (e.g. biological chemistry and statistics)

New Biology John Murray

The monograph "Explicit Biology: A Revision Course" for UTME, POST-UTME and other related examinations written by O.J. Olaoye is a complementary text to the various textbooks that have been written in the subject area. The book has five sections and twenty six chapters on all the biology topics. This book has become timely in view of the poor results that are being witnessed in the UTME examination especially in the sciences and mathematics, biology inclusive. These majorly are due to poor or inadequate access to good study materials. Each chapter has annotated topics followed by copious specimen questions on some past UTME and POST -UTME examination, for practice and emphasis. The topics in each chapter are adequately treated and with clarity. The illustrations are simple but effective. The author has done a lot of work and put in efforts to come out with a very readable and useful text. It is highly recommended to all the students aspiring to undertake the UTME and POST-UTME examination, in order to improve highly their chances of success. O.A. Sofola B.Sc, M.Sc, M.B.B.S (Lagos), Ph.D (Leeds), FAS (Nig.) Professor of physiology, College of Medicine, University of Lagos Former Vice Chancellor, OOU, Ago- Iwoye. Ogun State.

Biology Official Textbook Cambridge University Press

This is the first edition of the book that focuses on equipping the pre-service and the practicing teachers of biology with the current

knowledge and skills in biology education. The book is a response to the demand for such a book by practicing teachers, teacher trainees, and trainers in secondary school biology education. The book targets students training to become biology teachers at the Diploma, undergraduate and postgraduate levels. The book will also be a useful resource material for practicing teachers of biology in secondary schools and quality assurance officers and teacher trainers in universities and colleges. The book is based on the premise that potential teachers of biology are fairly well grounded in the various courses in botany and zoology, which provide more advanced biological knowledge than what is prescribed in the syllabi for secondary schools. The teachers are therefore required to adopt the advanced knowledge to suit the students in secondary schools. This requires the teachers to use professional approaches that facilitate the learning of biology notwithstanding the advanced biological knowledge on the ground. This book is about how we can help learners understand and appreciate the science of life. The book is presented in a simple, clear and Standard English language augmented with diagrammatic illustrations, pictures, and tables that are intended to motivate the reader. The book has also several tasks and exercises to get the readers to reflect on what they read and to further extend their knowledge. In addition, the book provides a summary of the information at the end of each chapter to help the reader recapitulate the content of the chapter.

My Biology Notebook Wiley

Basic Mathematics and Statistics for Science is a low-level introduction to the essential techniques students need to understand. It assumes little prior knowledge, and adopts a gentle approach that leads through examples in the book and website. No other text provides this range of educational support for science students. The integration between book and website provides study options that would be impossible through a book alone, and allows students to study in ways that suit their own circumstances and preferences. The combination of book and website also provides ready-prepared material for lectures, tutorials and computer practicals. Tutors can use the material to develop a variety of coherent programme using different learning

styles. The book develops the mathematics and statistics through examples and questions that reflect the scientific context, and has succeeded in being relevant to a range of undergraduate science programmes.

New Biology

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the

content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key

concepts.
