VIRGINIA FULLER

Motocourse Springer Nature

Spain, China and Japan in Manila, 1571-1644 offers a new perspective on the connected histories of Spain, China, and Japan as they emerged and developed following Manila's foundation as the capital of the Spanish Philippines in 1571. Examining a wealth of multilingual primary sources, Birgit Tremml-Werner shows that cross-cultural encounters not only shaped Manila's development as a "Eurasian" port city, but also had profound political, economic, and social ramifications for the three pre-modern states. Combining a systematic comparison with a focus on specific actors during this period, this book addresses many long-held misconceptions and offers a more balanced and multi-faceted view of these nations' histories.

Spain, China and Japan in Manila, 1571-1644 Springer Nature

A sweeping yet intimate--and often hilarious--history of a uniquely American art form that has never been more popular

Adaptive Radiation Therapy Lexington Books

By critically examining the legal, institutional, and social factors that prohibit or promote students' college choices, this Volume undermines the notion that African American students and their families are opposed to formal education, and reveals structural barriers which they face in accessing elite institutions. For African American students, unequal education is rooted in the history in the legacy of slavery and of the history of institutional and structural racism in United States. The long legacy of racism in education cannot be dismissed when reflecting on the college choice experiences of African American students made today. Authors uniquely apply Critical Race Theory (CRT) to analyse the college selection process of high achieving African American students and, highlight the similarities and differences within an impressive group of students, therefore challenging the deficit notions of African American students as perpetual under-achievers. They also show that contrary to the general assumption, African American parents are inclined towards providing their sons and daughters higher education at the elite institutes of US. The decision is often influenced by analysis of factors including the allocation of school resources, parental attitudes, university recruitment, campus outreach, and affordability. The issues of discrimination

on the grounds of race, class, and gender often plays a vital role in decision making process. This text will be of great interest to graduate and postgraduate students, researchers, academics, professionals and policy makers in the field of Race & Ethnicity in Higher Education, Sociology of Education, Equality & Human Rights, and African American Studies.

The Path from Climate Despair to Action Penguin

Originally published in 1985, this concordance lists all the words in the text indexed, along with the locations of their appearance in the Field of Reference. The Verbal Index lists the location of the context of each word in the Field of Reference. There is also a table listing alphabetically all words employed in the text and giving their frequency of occurrence. This volume is part of a series which produced verbal indexes, concordances, and related data for all of Conrad's works.

A Definitive Biography of Joseph Conrad Harper Collins

This book covers the nutritional and nutraceutical profiles of a wide range of popularly consumed vegetables and nuts. The first half of the book focuses on popular vegetables, and describes how higher vegetable consumption reduces the risk of diseases ranging from diabetes to osteoporosis, diseases of the gastrointestinal tract, cardiovascular diseases, autoimmune diseases and cancer.

The book also includes an interesting section on the antioxidant potential of mushrooms. In turn, the second half discusses the nutritional value of various nuts. Nuts are nutrient-dense foods with complex matrices rich in unsaturated fats, high-quality protein, fiber, minerals, tocopherols, phytosterols and phenolics. The respective chapters illustrate how the consumption of nuts could ward off chronic diseases like hypertension, cancer, inflammation, oxidative stress, high blood pressure, coronary heart disease etc. In order to effectively promote vegetable and nut consumption, it is necessary to know and understand the nutritional and nutraceutical profiles of vegetables & nuts. Given its scope, the book will be of interest to students, researchers, food scientists, olericulturists, dietitians and agricultural scientists alike. Those working in the vegetable and nut processing industries, horticultural departments and other agricultural departments will also find the comprehensive information relevant to their work.

Rethinking Land Degradation and Sustainable Land Management CABI

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

The Oxford Handbook of Laboratory Phonology Chelsea House Pub

This book offers the first comprehensive yet critical overview of methods used to evaluate interaction between humans and social robots. It reviews commonly used evaluation methods, and shows that they are not always suitable for this purpose. Using representative case studies, the book identifies good and bad practices for evaluating human-robot interactions and proposes new standardized processes as well as recommendations, carefully developed on the basis of intensive discussions between specialists in various HRI-related disciplines, e.g. psychology, ethology, ergonomics, sociology, ethnography, robotics, and computer science. The book is the result of a close, long-standing collaboration between the editors and the invited contributors, including, but not limited to, their inspiring discussions at the workshop on Evaluation Methods Standardization for Human-Robot Interaction (EMSHRI), which have been organized yearly since 2015. By highlighting and weighing good and bad practices in evaluation design for HRI, the book will stimulate the scientific community to search for better solutions, take advantages of interdisciplinary collaborations, and encourage the development of new standards to accommodate the growing presence of robots in the day-to-day and social lives of human beings.

Bisbee Drug Discovery for Leishmaniasis

This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. It seeks to expand the knowledge of American and Canadian policymakers pursuing a new foreign motor vehicle assembly plant or Foreign Direct Investment.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

In the aftermath of a reality TV deal gone wrong, Fiona Alison Duncan asks the question, Can you rewrite your life? The answer, her debut novel *Exquisite Mariposa*, follows a cast of housemates as they navigate questions of art making and economics, breakups and breakdowns, and the internet and its many obsessions. Given the initials F.A.D. at birth, Fiona Alison Duncan has always had an eye for observing the trends around her. But after years of looking for answers in books and astrological charts and working as a celebrity journalist to make rent, Fiona discovers another way of existing: in the Real, a phenomenological state few humans live in. Fiona's journey to the Real takes her to Koreatown, Los Angeles, where she sublets a room in *La Mariposa*. There, in the aftermath of a reality TV deal gone wrong, Fiona asks the question, Can you rewrite your life? The answer, her debut novel, *Exquisite Mariposa*, follows a cast of friends and lovers as they navigate questions of art making and economics, breakups and breakdowns, and the Internet and its many obsessions.

How We Made a Great American Art Routledge

This book reexamines the concept of the animal on the plane of immanence, as opposed to the traditional viewpoint founded on the plane of transcendence. Following Deleuze and Guattari's notion that philosophy is a discipline of creating concepts, this book traces how the concept of the animal was created in the history of philosophy through re-reading the works of Descartes, Kant, Heidegger, Derrida and Levinas. Their theories show that the concept of the animal was constructed on the "plane of transcendence" as subservient to the self-serving human, who represents the animal as a negative entity devoid of reason, ethics, the ability to enter into political alliances or even die. With this perspective and a range of theories from thinkers such as Spinoza, Nancy, Haraway and Braidotti as the groundwork, a new positive concept of the animal, operating on the plane of immanence, is sketched out, compelling a reappraisal of the relationships between body and thought, ethics and politics, or life and death. With comprehensive interpretations of the views of several key philosophers, from Kant and Heidegger to Deleuze, Derrida and Agamben, this book will be valuable for scholars of theoretical animal studies and continental philosophy interested in the philosophical significance of the animal question.

IFIP WG 5.7 International Conference, APMS 2021, Nantes, France, September 5-9, 2021,

Proceedings, Part I Houghton Mifflin Harcourt

Presents a history of sports cars from the earliest models, to the hot rods of the 1950s and 1960s, to contemporary styles

IOS Press

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. *Web Technologies: A Computer Science Perspective* is ideal for courses in Web-based Systems (aka Web/Internet Programming/Systems) in Computer Science, MIS, and IT departments. This text introduces the key technologies that have been developed as part of the birth and maturation of the World Wide Web. It provides a consistent, in-depth treatment of technologies that are unlikely to receive detailed coverage in non-Web computer science courses. Students will find an ongoing case study that integrates a wide spectrum of Web technologies, guidance on setting up their own software environments, and a variety of exercises and project assignments.

A Critical Biography of Dennis Cooper CRC Press

The Third Edition of *Medical Management of Thyroid Disease* provides the most up-to-date practical guidance for the diagnosis and management of common and uncommon thyroid diseases. It reflects the advancement in guidelines and research for thyroid cancer, nodules and hypothyroidism; all presented in an accessible format with more illustrations and algorithms for management. The contributions of internationally renowned endocrinologists present the clinical aspects from the world's perspective. Key Features - Completely revised and updated - Reorganized with more algorithms for quick reference and enhanced usability - Edited by internationally renowned physicians in the field - Authoritative, comprehensive and yet easily digestible

Since the 1950s, Dodge has produced a series of charismatic performance cars that have given the company a unique reputation among American car makers. The original Charger and Challenger and the more recent Viper and Caliber SRT are outstanding examples of the company's commitment to cars of high performance and aggressive styling. Peter Grist's pictorial history of these typically American machines gives a fascinating insight into their ancestry and evolution and celebrates the huge impact they have made on the road and on the track. His account is an exciting introduction that will appeal to everyone who is interested in American automobile history. When the first Dodge performance cars were conceived in the early 1950s, they were a brave step for a company that was well known for its dependable saloons and pickups. Peter Grist describes this change of direction and the radical new thinking that resulted in the creation of the innovative Dodge Hemi V8 of 1953. This remarkable engine provided the power for the first sporting Dodges and led to the race-bred D-500 series of 1956, the first Dodge Muscle car. But Dodge's reputation for creating big, potent, sporting cars was really consolidated in the 1960s and early 1970s the muscle-car era when the Dart, Charger and Challenger were so successful on the road, the race track and drag strip. The book features these historic cars and the drivers who have raised Dodge to a pre-eminent position over the last 50 years. Featuring illustrations of Dodge's styling experiments and concept cars, which had such a strong effect on their production models, from the first Dodge concept the 1954 Firearrow up to the most recent Challenger and Hornet. The book brings together an evocative collection of over 200 photographs and adverts that offer a unique look at ALL of Dodge's fast cars in one book. This is an entertaining and informative guide to the Dodge tradition which will be essential reading for Dodge enthusiasts and for everyone who enjoys their cars at full speed.

Techniques and Clinical Implementation Springer Nature

Modern medical imaging and radiation therapy technologies are so complex and computer driven that it is difficult for physicians and technologists to know exactly what is happening at the point-of-care. Medical physicists responsible for filling this gap in knowledge must stay abreast of the latest advances at the intersection of medical imaging and radiation therapy. This book provides medical physicists and radiation oncologists current and relevant information on Adaptive Radiation Therapy (ART), a state-of-the-art approach that uses a feedback process to account for patient-specific anatomic and/or biological changes, thus delivering highly individualized radiation therapy for cancer patients. The book should also benefit medical dosimetrists and radiation therapists. Adaptive Radiation Therapy describes technological and methodological advances in the field of ART, as well as initial clinical experiences using ART for selected anatomic sites. Divided into three sections (radiobiological basis, current technologies, and clinical applications), the book covers: Morphological and biological biomarkers for patient-specific planning Design and optimization of treatment plans Delivery of IMRT and IGRT intervention methodologies of ART Management of intrafraction variations, particularly with respiratory motion Quality assurance needed to ensure the safe delivery of ART ART applications in several common cancer types / anatomic sites The technology and methodology for ART have advanced significantly in the last few years and accumulated clinical data have demonstrated the need for ART in clinical settings, assisted by the wide application of intensity modulated radiation therapy (IMRT) and image-guided radiation therapy (IGRT). This book shows the real potential for supplying every patient with individualized radiation therapy that is maximally accurate and precise.
