 While coordinating the University of Groningen's Honours College Winterschool/Atelier entitled Children's Rights in Health Care, the need to publish the contributions to this program was generally expressed and confirmed by its participants. The Winterschool/Atelier, successfully organized in recent years, has dealt with many issues concerning the legal position of minor persons - born and unborn - in the context of health care, especially pediatric care. These issues involve matters concerning pediatric treatment, preventive care and predictive medicine, medical research involving children, incompetence and child autonomy, a child's psychological development, parental responsibility and representation, protective judicial measures, child migration issues, children's health rights enforcement as well as children's health interest monitoring and promotion. During the program, leading experts in the fields of law, ethics, medicine, biology, psychology and institutions such as the Dutch Child & Hospital Foundation, the Child Protection Board, Save the Children, and UNICEF shared their views on normative standards, practical experiences, significant developments, challenging ideas, silent dreams and inevitable realities. As a result, the Children's Rights in Health Care program provided opportunities for a profound dialogue between Honours College students and lecturing scholars on a wide range of topics involving children's health care interests. This volume contains several analyses of health rights issues related to children. The various chapters provide an overview of this captivating area and may be of special interest to lawyers, health care professionals, ethicists, psychologists, judicial institutions, policy makers, interest groups, students and all others who are concerned with the children's rights perspective on health care.

There is no other time in life when the provision of adequate and balanced nutrition is of greater importance than during infancy and childhood. During this dynamic phase characterized by rapid growth, development and developmental plasticity, a sufficient amount and appropriate composition of nutrients both in health and disease are of key importance for growth, functional outcomes such as cognition and immune response, and the metabolic programming of long-term health and well-being. This compact reference text provides concise information to readers who seek quick guidance on practical issues in the nutrition of infants, children and adolescents. After the success of the first edition, which sold more than 50'000 copies in several languages, the editors prepared this thoroughly revised and updated second edition which focuses again on nutritional challenges in both affluent and poor populations around the world. Serving as a practical reference guide, this book will contribute to further improving the quality of feeding of healthy infants and children, as well as enhancing the standards of nutritional care in sick children.

Bernard Rosner's FUNDAMENTALS OF BIostatISTICS is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems. Most methods are illustrated with specific instructions as to implementation using software either from SAS, Stata, R, Excel or Minitab. xxxThis updated third edition is a detailed reference for nurses and other health care providers who care for children with neurosurgical conditions. The explanations of pathophysiology, anatomy, neurodiagnostic imaging, and treatment options for each neurosurgical diagnosis will help to clarify the rationale behind the nursing care. Descriptions of presenting symptoms, history and findings on neurological examination will help nurses understand the neurological disorder and identify problems. New chapters have been added on skull and scalp anomalies, pediatric concussion, abuse head trauma and on neuroimaging. Each chapter includes case studies, impact on families, patient and family education, and practice pearls. Staff and student nurses working in clinics, critical care units, pediatric units, operating rooms, post-anesthesia care units, emergency departments, and radiology departments will benefit from the information presented. Although this book is written for nurses, child life therapists, physical and occupational therapists, medical students and neurosurgery residents will also find it helpful. Parents of children with neurosurgical disorders will also find it a useful resource in understanding their child's condition. Cathy C. Cartwright and Donna C. Wallace have been awarded third place in the 2017 American Journal of Nursing Book of the Year Awards in CHILD HEALTH category.
