are the most widely used gas turbine engine for air transport aircraft. The turbofan is a compromise between the good operating efficiency and high thrust capability of a turboprop and the high speed, high altitude capability of a turbojet. AIRCRAFT GAS TURBINE ENGINE TECHNOLOGY TRAEGER PDF The history of the aircraft gas turbine engines is the history of advanced material development specifically aimed at improving gas turbines; some highly successful examples include forged titanium alloys (now widely used in aircraft structure as well), several nickel superalloys, single-crystal turbine airfoils, 9 forged high-temperature powder metal alloys, coatings for environmental protection and for thermal barriers, and,

most recently, titanium aluminides.
