Podrid's Real-World ECGs combines traditional case-based workbooks with a versatile Web-based program to offer students, health care professionals, and physicians an

indispensable resource for developing and honing the technical skills and systematic approach needed to interpret ECGs with confidence. ECGs from real patient cases offer a complete and in-depth learning experience by focusing on fundamental electrophysiologic properties and clinical concepts as well as detailed discussion of important diagnostic findings and relevant management decisions. Six comprehensive volumes encompass more than 600 individual case studies—plus an online repository of hundreds more interactive case studies (www.realworldECGs.com)—that include feedback and discussion about the important waveforms and clinical decision-making involved. From an introductory volume that outlines the approaches and tools utilized in the analysis of all ECGs to subsequent volumes covering particular disease entities for which the ECG is useful, readers will take away the in-depth knowledge needed to successfully interpret the spectrum of routine to challenging ECGs they will

encounter in their own clinical practice. Dr. Philip Podrid, the primary author, is an academic cardiologist and Professor of Medicine and Pharmacology at Boston University School of Medicine and a Lecturer at Harvard Medical School. He has taught ECG interpretation for more than 35 years to medical students, house staff (interns and residents), cardiology fellows, physicians, nurses, and EMTs. Volume 4: Arrhythmias Volume 4, Arrhythmias--Part A: Core Cases presents 62 cases that are fundamental to the understanding and diagnosis of arrhythmias. Included are rhythm disorders involving the sinus node, those generated by the atrial myocardium, those involving the AV node or junction, and those that originate within the ventricular myocardium. An additional 58 cases for further study are available in a separate digital edition, Volume 4, Arrhythmias--Part B: Practice Cases.

Review John Wiley & Sons

From the Basics to Advanced techniques 3rd Edition for 2016 is New and Greatly Expanded with over 120 pages of text, graphics and illustrations to help you start IVs! Intravenous cannulation is one of the most difficult skills most RNs, LVNs and EMTs will learn. If you are scared out of your mind about starting IVs, you are not alone. It is an invasive and often painful procedure that requires both skill and practice to master. Maybe you are worried about hurting your patient. Or perhaps you are afraid of appearing incompetent in front of the patient if you are unsuccessful. All too often it seems easier to just ask someone else. Like any skill, some will be better than others. Some will learn faster, others it will take more time. Our

goal is to provide you a RAPID and EASY way to master the IV stick! Not everyone will become an expert, and that's OK. But at a minimum, we want to impart every professional with the skill and confidence to start a routine, uncomplicated IV in their patient. Whether you are a new-grad who needs the essentials or a seasoned professional looking to learn some advanced techniques, everyone can always learn something new. In depth review of the following: Basics to Advanced Techniques Over 120 pages of text, graphics and pictures Gauges-choosing the correct gauge Basic anatomy and physiology of veins Strategies to distend veins and make them Pop Out! How to choose veins which to avoid A colorful, illustrated step-by-step guide to starting a standard IV 4 methods to threading the catheter 3 approaches to inserting the needle Guide to the "Floating technique" Visual guide to what you are doing wrong when a vein blows Finding and avoiding valves The Y-Bifurcation Inserting IVs in the elderly Vesicant medications Assortment of tips and tricks By the

end you will have not just the skills to start an IV, but the confidence to go out there and give each patient your two best shots. Example Chapter Threading the catheter At this point both the tip of the needle and the tip of the catheter are inside the vein. You will now need to thread the rest of the catheter into the vein. The catheter is fully inside the vein when only the hub sticks out. There are several different methods to advancing the catheter The Two Handed Technique You have already visualized flash, lowered your angle, advanced 1-2mm and released the tourniquet. Continue holding the needle in place With your non-dominant hand, grasp the hub of the catheter and slide it forward into the vein Slowly withdraw the needle Place your thumb on the hub of the catheter to hold it in place Use your index finger to press down above the site to prevent blood from spilling out The Single Handed Technique You have already visualized flash, lowered your angle, advanced 1-2mm and released the tourniquet. Continue holding the needle in place. Use the index finger of the hand that is holding the needle

to slide the catheter past the needle. Continue sliding the catheter until it is fully inside the vein. With the above two techniques, be careful that you are only advancing the catheter into the vein and not the needle. If the catheter is inside the vein it should be relatively easy and painless to advance it. Unlike the needle, the catheter is soft and flexible so it will be difficult to slide it in unless you are inside the vein. If the flashback was very small, you may feel resistance...

 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the

way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

With over 200 traces to test your knowledge, this book is a first class learning tool for emergency physicians. Basic student-level knowledge of ECGs is assumed, so the reader can move directly to learning about the more complex traces that occur in the emergency department. The level of difficulty is stratified into two sections for specialists in training and specialist emergency physicians. A minimum amount of information is given beneath each trace, as if in the real situation. The full clinical description is printed in a separate section to avoid the temptation of

"looking". Accompanied by learning points, and with the cases presented randomly, this book provides a rich source of information on the interpretation of ECGs – a core skill for all emergency department staff.
