 Markov Chains - University of Cambridge
 Markov Chains
 These notes contain material prepared by colleagues who have
 also presented this course at Cambridge, especially James Norris.
 The material mainly comes from books of Norris, Grimmett &
 Stirzaker, Ross, Aldous & Fill, and Grinstead & Snell. Many of the
 examples are classic and ought to occur in any sensible course
 on Markov chains.

The Department of Pure Mathematics and Mathematical Statistics (DPMMS) (including the Statistical Laboratory as a sub-department) conducts teaching and research across a wide range of pure mathematics, probability and statistics. DPMMS currently

hosts over 100 Academic and Research Staff and around 80 PhD students over three Pavilions as part of the Centre for Mathematical ... Welcome to DPMMS - University of Cambridge A Markov chain is a mathematical system that experiences transitions from one state to another according to certain probabilistic rules. The defining characteristic of a Markov chain is that no matter how the process arrived at its present state, the possible future states are fixed. In other words, the probability of transitioning to any particular state is dependent solely on the current state and time elapsed.
