Multiagent Systems NewSouth Books
 Multiagent systems combine multiple autonomous entities, each having diverging interests or different information. This overview of the field offers a computer science perspective, but also draws on ideas from game theory, economics, operations research, logic, philosophy and linguistics. It will serve as a reference for researchers in each of these fields, and be used as a text for advanced undergraduate or graduate courses. The authors emphasize foundations to create a broad and rigorous treatment of their subject, with thorough presentations of distributed problem solving, game theory, multiagent

communication and learning, social choice, mechanism design, auctions, cooperative game theory, and modal logics of knowledge and belief. For each topic, basic concepts are introduced, examples are given, proofs of key results are offered, and algorithmic considerations are examined. An appendix covers background material in probability theory, classical logic, Markov decision processes and mathematical programming.
Theory and Practice in the Revitalisation of Australia's Indigenous Languages
 Cambridge University Press
 This is a volume about the life and power of ritual objects in their religious ritual settings. In this Special Issue, we see a wide range of contributions on material culture and ritual practices across religions. By focusing on the dynamic interrelations between objects, ritual, and

belief, it explores how religion happens through symbolic materiality. The ritual objects presented in this volume include: masks worn in the Dogon dance; antique ecclesiastical silver objects carried around in festive processions and shown in shrines in the southern Andes; funerary photographs and films functioning as mnemonic objects for grieving children; a dented rock surface perceived to be the god's footprint in the archaic place of pilgrimage, Gaya (India); a recovered manual of rituals (from Xiapu county) for Mani, the founder of Manichaeism, juxtaposed to a Manichaeian painting from southern China; sacred stories and related sacred stones in the Alor-Pantar archipelago, Indonesia; lotus symbolism, indicating immortalizing plants in the mythic traditions of Egypt, the Levant, and Mesopotamia; lavishly illustrated

variations of portrayals of Ravana, a Sinhalese god-king-demon; figurines made of cow dung sculptured by rural women in Rajasthan (India); and mythical artifacts called 'Apples of Eden' in a well-known interactive game series.

Improvising Jazz Sydney University Press
How did games rise to become the central audiovisual form of expression and storytelling in digital culture? How did the practices of their artistic production come into being? How did the academic analysis of the new medium's social effects and cultural meaning develop? Addressing these fundamental questions and aspects of digital game culture in a holistic way for the first time, Gundolf S. Freyermuth's introduction outlines the media-historical development phases of analog and digital games, the history and artistic practices of game design, as well as the history, academic approaches, and most important research topics of game studies. With contributions by André Czauderna, Nathalie Pozzi and Eric Zimmerman.

The New Science of Cities Intellect Books
In this, the first modern study of the ancient fairytale, Graham Anderson asks whether the familiar children's fairytale of today existed in the ancient world. He examines texts from the classical period and finds many stories which resemble those we know today, including: * a Jewish Egyptian Cinderella * a Snow White whose enemy is the goddess Artemis * a Pied Piper at Troy. He puts forward many previously unsuspected candidates as classical variants of the modern fairytale and argues that the degree of violence and cruelty in the ancient tales means they must have been meant for adults.
The Para-Academic Handbook Psychology Press

The issue of permanence and change of word-order patterns has long been debated in both historical linguistics and structural theories. The interest in this theme has been revamped by contemporary research in typology with its emphasis on correlation or 'harmonies' of structures of word-order as explicative principles of both synchronic and diachronic processes. The aim of this book is to stimulate a critical reconsideration of perspectives and methods in the study of continuities and discontinuities of word-order patterns. Bringing together contributions by specialists of various theoretical backgrounds and with expertise in different language families or groups (Caucasian, Hamito-Semitic, and among Indo-European Hittite, Greek, Celtic, Germanic, Slavonic, Romance), the book addresses issues like the notions of stability, variation and change of word-

order and their interrelations, the interplay of syntactic and pragmatic factors, and the role of internal and external factors in synchronic and diachronic dynamics of word-order. The book contains a selection of papers presented at a workshop held at the XIII International Conference on Historical Linguistics (Dusseldorf, August 1997) and additional invited contributions.
Psychology and the Classics Springer
While the field of classics has informed and influenced the early developments of the field of psychology, these two disciplines presently enjoy fewer fruitful cross-fertilizations than one would expect. This book shows how the study of classics can help psychologists anchor their scientific findings in a historical, literary and philosophical framework, while insights of contemporary psychology offer new hermeneutic methods and explanations to classicists. This book is the first to date to offer a wide-ranging overview of the possibilities of marrying contemporary trends in psychology and classical studies. Advocating a critical dialogue between both disciplines, it offers novel reflections on psychotherapy, ancient philosophy, social psychology, literature and its theory, historiography, psychoanalysis, tragedy, the philosophy of mind, linguistics and reception. With twenty contributions by specialists in different fields, it promotes the combination of classical and psychological perspectives, and demonstrates the methods and rewards of such an endeavour through concrete case studies. This pioneering book is thus intended for all readers who seek inspiration for their readings, research, or therapeutic practice.

The Chechens Springer
Computer science and economics have engaged in a lively interaction over the past fifteen years, resulting in the new field of algorithmic game theory. Many problems that are central to modern computer science, ranging from resource allocation in large networks to online advertising, involve interactions between multiple self-interested parties. Economics and game theory offer a host of useful models and definitions to reason about such problems. The flow of ideas also travels in the other direction, and concepts from computer science are increasingly important in economics. This book grew out of the author's Stanford University course on algorithmic game theory, and aims to give students and other newcomers a quick and accessible introduction to many of the most important concepts in the field. The book also includes case studies on online

advertising, wireless spectrum auctions, kidney exchange, and network management.

Twenty Lectures on Algorithmic Game Theory Russell Sage Foundation

All the latest research on fluency plus dozens of practical lessons and ready-to-use fluency-priming tools, including partner poems, word ladders, and more!
Grace, Grit, and Glory Walter de Gruyter GmbH & Co KG

Telling stories from secondary and college English classrooms, this book explores the new possibilities for teaching and learning generated by bringing together reader-response and cultural-studies approaches. The book connects William Shakespeare, Charles Dickens, Mark Twain, and other canonical figures to multicultural writers, popular culture, film, testimonial, politics, history, and issues relevant to contemporary youth. Each chapter contains brief explications of literary scholarship and theory, and each is followed by extensive annotated bibliographies of multicultural literature, approachable scholarship and theory, and relevant Internet sites. Each chapter also contains descriptions of classroom units and activities focusing on a particular theme, such as genocide, homelessness, race, gender, youth violence, (post)colonialism, class relations, and censorship; and discussion of ways in which students often respond to such "hot-button" topics. Chapters in the book are: (1) A Course in Contemporary World Literature; (2) Teaching about Homelessness; (3) Genderizing the Curriculum: A Personal Journey; (4) Addressing the Youth Violence Crisis; (5) Shakespeare and the New Multicultural British and World Literatures; (6) "Huckleberry Finn" and the Issue of Race in Today's Classroom; (7) Testimonial, Autoethnography, and the Future of English; and (8) Conclusion. Contains approximately 350 references. Appendixes contain an email exchange between the author and a first year, inner-city teacher; a note to teachers on the truth of Rigoberta Menchu's testimonial; a brief account of philology; a 13-item annotated bibliography of readings in literary theory for English teachers; and lists of web sites exploring literary theory and cultural studies, supporting literature teaching, and for new teachers. (NKA)

Developing Early Literacy Routledge

This lively and erudite cultural history examines how Scottish identity was experienced and represented in novel ways.

Proceedings MIT Press

The International Encyclopedia of Men and Masculinities offers a comprehensive guide to the current state of scholarship about men, masculinities, and gender around the world. The Encyclopedia's coverage is comprehensive across three dimensions: areas of personal and social life, academic disciplines, and cultural and historical contexts and formations. The Encyclopedia: examines every area of men's personal and social lives as shaped by gender covers masculinity politics, the men's groups and movements that have tried to change men's roles presents entries on working with particular groups of boys or men, from male patients to men in prison incorporates cross-disciplinary perspectives on and examinations of men, gender and gender relations gives comprehensive coverage of diverse cultural and historical formations of masculinity and the bodies of scholarship that have documented them. The Encyclopedia of Men and Masculinities is composed of over 350 free-standing entries written from their individual perspectives by eminent scholars in their fields. Entries are organized alphabetically for general ease of access but also listed thematically at the front of the encyclopedia, for the convenience of readers with specific areas of interest.

Art and Identity Jessica Kingsley Publishers

The National Assessment of Educational Progress reveals that 37 percent of U.S. fourth graders fail to achieve basic levels of reading achievement. In 1997, the U.S. Congress asked that a review of research be conducted to determine what could be done to improve reading and writing achievement. The resulting "Report of the National Reading Panel: Teaching Children to Read" (NICHD, 2000) has been influential in helping to guide reading-education policy and practice in the United States. However, that report did not examine the implications of instructional practices used with children from birth through age 5. To address this gap in the knowledge base, the National Early Literacy Panel (NELP) was convened. The panel was asked to apply a similar methodological review process to that used by the National Reading Panel (NRP) to issues of instructional practices for young children so that parents and teachers could better support their emerging literacy skills. The NELP report represents a systematic and extensive synthesis of the published research literature concerning children's early literacy skills. It provides educators and policymakers with important information about the early skills that are implicated in

later literacy learning, as well as information about the type of instruction that can enhance these skills. The results also identify areas in which additional research is needed. The meta-analyses conducted by the panel showed that a wide range of interventions had a positive impact on children's early literacy learning.

Bus Ride to Justice Routledge

This volume provides a ready introduction and practical guide to the Chechen people, including chapters on history, religion, politics, economy, culture, literature and media.

Prelude to Bruise Simon and Schuster

Multistage stochastic optimization problems appear in many ways in finance, insurance, energy production and trading, logistics and transportation, among other areas. They describe decision situations under uncertainty and with a longer planning horizon. This book contains a comprehensive treatment of today's state of the art in multistage stochastic optimization. It covers the mathematical backgrounds of approximation theory as well as numerous practical algorithms and examples for the generation and handling of scenario trees. A special emphasis is put on estimation and bounding of the modeling error using novel distance concepts, on time consistency and the role of model ambiguity in the decision process. An extensive treatment of examples from electricity production, asset liability management and inventory control concludes the book.

Literature and Lives SIAM

This book constitutes the refereed proceedings of the 5th International Conference on User Science and Engineering, i-USEr 2018, held in Puchong, Malaysia, in August 2018. The 32 papers accepted for i-USEr 2018 were selected from 72 submissions with a thorough double-blind review process. The selected papers illustrate how HCI is inclusive and omnipresent within the domains of informatics, Internet of Things, Quality of Life, and others. They are organized in the following topical sections: design, UX and usability; HCI and underserved; technology and adoption; human centered computing; HCI and IT infrastructure; and HCI and analytics.

Human Rights and Narrated Lives Springer

Frustrated by the lack of opportunities to research, create learning experiences or make a basic living within the university on our own terms, para-academics don't seek out alternative careers in the face of an evaporated future, we just continue to do what we've always done: write, research, learn, think and facilitate that

process for others. As the para-academic community grows there is a real need to build supportive networks, share knowledge, ideas and strategies that can allow these types of interventions to become sustainable and flourish. There is a very real need to create spaces of solace, action and creativity. Para-academics mimic academic practices so they are liberated from the confines of the university. Our work, and our lives, reflect how the idea of a university as a place for knowledge production, discussion and learning, has become distorted by neo-liberal market forces. We create alternative, genuinely open access, learning-thinking-making-acting spaces on the internet, in publications, in exhibitions, discussion groups or other mediums that seem appropriate to the situation. We don't sit back and worry about our career developments paths. We write for the love of it, we think because we have to, we do it because we care. Reviews 'This is a hugely important book for anyone who feels (as I often do) alienated or marginalised by corporate academic life. It not only gives a voice to a growing constituency of para-academics; it also articulates a series of alternative visions for the future of the university, driven not from the centre but from the margins, the borderlands, the places where the interesting stuff happens. As such, it should be read not only by those who already work in the margins, but by all academics, students, researchers and administrators from across the academy who wish to find out what they are missing.' Gary Rolfe, author of *The University in Dissent* 'Academia is dying, and in the process compulsively crushes the desires for learning, creating, teaching, cooperating it claimed to foster. It is a relevant and important political gesture to invent a name, para-academics, for those who refuse to be crushed, who do not sadly dream about a return to the past, when the "worthy ones" were identified and separated from the flock, but inhabit interstices, inside, outside and in-between, activists and bridge-builders where separation prevailed. It is claiming they are alive, not just surviving, and are part of the fragile creation of a collective future worth living.' Isabelle Stengers, author of *Cosmopolitics* and co-author of *Women Who Make a Fuss: The Unfaithful Daughters of Virginia Woolf* 'This important new book is simultaneously a critique, a lament and a re-envisaging. It is a compelling portrait of the new topographies of higher education and a testament to the power, inventiveness and resilience of those who work within, across

and beyond its new spaces.' Ruth Barcan, author of *Academic Life and Labour: Hope and Other Choices*

University of California Press

Personal narratives have become one of the most potent vehicles for advancing human rights claims across the world. These two contemporary domains, personal narrative and human rights, literature and international politics, are commonly understood to operate on separate planes. This study however, examines the ways these intersecting realms unfold and are enfolded in one another in ways both productive of and problematic for the achievement of social justice. *Human Rights and Narrated Lives* explores what happens when autobiographical narratives are produced, received, and circulated in the field of human rights. It asks how personal narratives emerge in local settings; how international rights discourse enables and constrains individual and collective subjectivities in narration; how personal narratives circulate and take on new meanings in new contexts; and how and under what conditions they feed into, affect, and are affected by the reorganizations of politics in the post cold war, postcolonial, globalizing human rights contexts. To explore these intersections, the authors attend the production, circulation, reception, and affective currents of stories in action across local, national, transnational, and global arenas. They do so by looking at five case studies: in the context of the Truth and Reconciliation processes in South Africa; the National Inquiry into the Forced Removal of Indigenous Children from their Families in Australia; activism on behalf of former 'comfort women' from South/East

Asia; U.S. prison activism; and democratic reforms in the aftermath of the Tiananmen Square Massacre in China.

[Digital Entrepreneurship](#) Wayne State University Press

A proposal for a new way to understand cities and their design not as artifacts but as systems composed of flows and networks. In *The New Science of Cities*, Michael Batty suggests that to understand cities we must view them not simply as places in space but as systems of networks and flows. To understand space, he argues, we must understand flows, and to understand flows, we must understand networks—the relations between objects that compose the system of the city. Drawing on the complexity sciences, social physics, urban economics, transportation theory, regional science, and urban geography, and building on his own previous work, Batty introduces theories and methods that reveal the deep structure of how cities function. Batty presents the foundations of a new science of cities, defining flows and their networks and introducing tools that can be applied to understanding different aspects of city structure. He examines the size of cities, their internal order, the transport routes that define them, and the locations that fix these networks. He introduces methods of simulation that range from simple stochastic models to bottom-up evolutionary models to aggregate land-use transportation models. Then, using largely the same tools, he presents design and decision-making models that predict interactions and flows in future cities. These networks emphasize a notion with relevance for future research and planning: that design of cities is collective action.

[The Ethics of Recognition](#) Alfred Music

At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit www.luminosoa.org to learn more. In this beautifully written and deeply researched study, Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920–1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called “cels”) and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line. [A Decision-Making Guide for Integrative Play Therapists](#) MDPI
Bilateral Cochlear Implants (CIs) offer great benefits to patients suffering from lack of hearing by improving speech understanding as well as by providing a sense of directionality. Software and hardware synchronization issues of binaural processing have limited all the benefits that could be offered by bilateral CIs. This book provides discussions on topics that include a generalized speech enhancement framework for bilateral cochlear implants using a single processor; long-term results of CIs; minimally invasive cochlear implantation; quality of life in adult CI recipients; and the evolution of the indications for CI and new frontiers.
