Advances in Artificial Intelligence (AI) technology have opened up new markets and new opportunities for progress in critical areas such as health, education, energy, and the environment. In recent years, machines have surpassed humans in the performance of certain specific tasks, such as some aspects of image recognition. Experts forecast that rapid progress in the field of specialized artificial intelligence will continue. Although it is very unlikely that machines will exhibit broadly-applicable intelligence comparable to or exceeding that of humans in the next 20 years, it is to be expected that machines will reach and exceed human performance on more and more tasks. As a contribution toward preparing the United States for a future in which AI plays a growing role, this report surveys the current state of AI, its existing and potential applications, and the questions that are raised for society and public policy by progress in AI. The report also makes recommendations for specific further actions by Federal agencies and other actors.

"What an extraordinary volume! This book brings together current research integrating adolescent risk and protection across a wide range of topics and disciplines. It is a major contribution to the field." — Robert Wm. Blum, MD, MPH, PhD, Professor and Director, Center for Adolescent Health and Development, University of Minnesota  
 "This book is clearly the best source now available on the topic of adolescent risk taking and its prevention. With chapters written by the very best people in the field, describing the latest thinking and findings, it is an essential guide and resource for prevention researchers and program developers." — Bruce Simons-Morton, EdD, MPH, Chief, Prevention Research Branch Division of Epidemiology, Statistics, and Prevention Research, National Institute of Child Health and Human Development  
 "This report shines a bright light on the road our nation has taken to improve adolescent health, the approaching fork, and the path most likely to attain our destination." — Lloyd J. Kolbe, PhD, Director, Division of Adolescent and School Health, U.S. Centers for Disease Control And Prevention  
 "Reducing Adolescent Risk: Toward an Integrated Approach weaves together current research findings with prevailing prevention strategies to shed further light on the developmental pathways leading to a variety of interrelated adolescent risk behaviors. In doing so, the authors skillfully make the case for more integrated policy approaches and for comprehensive programming at the community level that both recognizes the connections between risk behaviors and maximizes young people's positive potential." — Karen Pittman, Executive Director, The Forum for Youth Investment & President, Impact Strategies, Inc.  
 Many risk behaviors have common developmental pathways. However, most prevention strategies approach adolescent risk behaviors as individual problems requiring separate solutions. This policy of treating one behavior at a time encourages a fractured approach to adolescent health. Reducing Adolescent Risk: Toward an Integrated Approach focuses on common influences that result in a number of interrelated risk behaviors in order to design more unified, comprehensive prevention strategies.  
 Edited by Daniel Romer, this book summarizes presentations and discussions held at the Adolescent Risk Communication Institute of the University of Pennsylvania Annenberg Public Policy Center. Concentrating on common causes for varied risk behaviors, a group of leading researchers and intervention specialists from different health traditions synthesize current knowledge about risks to

adolescent health in several areas, including drugs and alcohol, tobacco, unprotected sex, suicide and depression, and gambling. Promoting healthy adolescent development, this innovative volume includes Results of the National Risk Survey Contributions from experts on adolescent decision making and problem solving Research agendas for programs that reduce multiple risks Potential intervention strategies to reduce more than one risk at a time Major findings from the conference that should be pursued in future research Primarily intended for graduate students, scholars, and researchers in psychology, sociology, social work, and public health, Reducing Adolescent Risk is also an extraordinary resource for policy makers in government organizations and foundations.

When Erik Tawaststjerna completed his multi-volume study of Jean Sibelius (1865-1957) in the late 1980s, it was anticipated that it would become the definitive source for information about the life and music of Finland's most revered composer. While there is no denying the musicological significance of Tawaststjerna's contribution, one nevertheless searches in vain among the pages of this monumental work for any discussion of Sibelius's association with Freemasonry or his "Musique religieuse" (opus 113). Prior to 1998, only one study of Sibelius's Masonic music had been published. It was written by Einari Marvia in Finnish, a language not readily accessible to most scholars. It therefore seemed appropriate to publish, in English, another study of this work, one that would draw not only from Marvia's research but also from a number of newly discovered documents. The author's first edition of *Sibelius and His Masonic Music* (1998) and its supplement (1999) has now been revised and presented here in a single volume. Those who have expressed an interest in discerning Sibelius's views of religion will find this study offers considerable information about that aspect of the composer's life. Opus 113 had become for him an expression of his belief in the universality of the Divine, a belief given credence in the beauty and wonder of nature.

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

This comprehensive and practical reference is the perfect resource for the medical specialist treating persons with spinal cord injuries. The book provides detail about all aspects of spinal cord injury and disease. The initial seven chapters present the history, anatomy, imaging, epidemiology, and general acute management of spinal cord injury. The next eleven chapters deal with medical aspects of spinal cord damage, such as pulmonary management and the neurogenic bladder. Chapters on rehabilitation are followed by nine chapters dealing with diseases that cause non-

traumatic spinal cord injury. A comprehensive imaging chapter is included with 30 figures which provide the reader with an excellent resource to understand the complex issues of imaging the spine and spinal cord.

All over the world societies are facing a number of major problems. New developments, challenges and opportunities cause these issues and yet cases tell us that traditional spatial planning responses and tools are often insufficient to tackle these problems and challenges. *Situated Practices of Strategic Planning* draws together examples from across the globe - from France to Australia; from Nigeria to the United States, as it observes international comparisons of the strategic planning process. Many approaches and policies used today fail to capture the dynamics of urban/regional transformation and are more concerned with maintaining an existing social order than challenging and transforming it. Stewarded by a team of highly regarded and experienced researchers, this book gives a synthetic view of the process of change and frames future directions of development. It is unique for its combination of analysis of international case studies and reflection on critical nodes and features in strategic planning. This volume will be of interest to students who study regional planning, academics, professional planners, and policy makers.

The original novelization of *King Kong*, featuring a new introduction by Jack Thorne, the Tony-winning playwright of *King Kong: Alive on Broadway*, and cover art by the celebrated Olly Moss The giant primeval gorilla King Kong is one of the most recognized images in our culture. So great is the mighty Kong's hold on the popular imagination that his story has inspired an entire cinematic universe. Now the legendary monster comes to the stage in the brand-new musical *King Kong: Alive on Broadway*. Beneath King Kong's cultural significance, however, is a tense and surprisingly tender story. One cannot help but be frightened by Kong's uncontrollable fury, be saddened over the giant's capture, mistreatment, and exploitation by venal showmen, or sympathize with the beast's ill-fated affection for the down-on-her-luck starlet Ann Darrow. With a foreword by Mark Cotta Vaz, the preeminent biographer of Merian C. Cooper, producer of the original 1933 classic film.

In a tour-de-force reinterpretation of the Christian tradition, Agamben shows that the Garden of Eden has always served as a symbol for humanity's true nature. What happened to paradise after Adam and Eve were expelled? The question may sound like a theological quibble, or even a joke, but in *The Kingdom and the Garden*, Giorgio Agamben uses it as a starting point for an investigation of human nature and the prospects for political transformation. In a tour-de-force reinterpretation of the Christian tradition, Agamben shows that the Garden of Eden has always served as a symbol of humanity's true nature. Where earlier theologians viewed the expulsion as temporary, Augustine's doctrine of original sin makes it permanent, reimagining humanity as the paradoxical creature that has been completely alienated from its own nature. From this perspective, there can be no return to paradise, only the hope for the messianic kingdom. Yet there have always been thinkers who rebelled against this idea, and Agamben highlights two major examples. The first is the early medieval philosopher John Scotus Eriugena, who argued for a radical unity of humanity with all living things. The second is Dante, whose vision of the earthly paradise points towards the possibility of genuine human happiness in this world. In place of the messianic kingdom, which has provided the model for modern revolutionary movements, Agamben contends that we should place our hopes for political change in a return to our origins, by reclaiming the earthly paradise.

A woman finds love and closure, and rediscovers herself, when she returns to her roots in the enchanting new novel from the author of *The Irresistible Blueberry Bakeshop & Café*. Newly jobless, newly single, and suddenly apartmentless, writer Grace Hammond has come unmoored. A grammar whiz who's brilliant at correcting other people's errors, she hasn't yet found quite the right set of rules for fixing her own mistakes. Desperate to escape the city and her trilemma of problems, Grace hits pause and retreats to her Connecticut hometown. What begins as a short visit with her parents quickly becomes a far more meaningful stay, though, as she discovers that the answers to what her future holds might be found by making peace with -- and even embracing -- the past. As Grace sets

out to change her ways and come to terms, finally, with the tragedy that took her older sister's life so many years ago, she rekindles a romance with her high school sweetheart, Peter, now a famous Hollywood director who's filming a movie in town. Sparks also fly at the local bike shop, where Grace's penchant for pointing out what's wrong rattles the owner's ruggedly handsome schoolteacher son, Mitch. Torn between the promise of a glamorous life and the allure of the familiar, Grace must decide what truly matters -- and whether it's time for her to throw away the rule book and bravely follow her heart.

A fascinating new study from the originator of the Gaia Theory, "who conceived the first wholly new way of looking at life on earth since Charles Darwin" (Independent) One of the world's leading scientific thinkers offers a vision of a future epoch in which humans and artificial intelligence unite to save the Earth. James Lovelock, creator of the Gaia hypothesis and the greatest environmental thinker of our time, has produced an astounding new theory about future of life on Earth. He argues that the Anthropocene—the age in which humans acquired planetary-scale technologies—is, after 300 years, coming to an end. A new age—the Novacene—has already begun. In the Novacene, new beings will emerge from existing artificial intelligence systems. They will think 10,000 times faster than we do and they will regard us as we now regard plants. But this will not be the cruel, violent machine takeover of the planet imagined by science fiction. These hyperintelligent beings will be as dependent on the health of the planet as we are. They will need the planetary cooling system of Gaia to defend them from the increasing heat of the sun as much as we do. And Gaia depends on organic life. We will be partners in this project. It is crucial, Lovelock argues, that the intelligence of Earth survives and prospers. He does not think there are intelligent aliens, so we are the only beings capable of understanding the cosmos. Perhaps, he speculates, the Novacene could even be the beginning of a process that will finally lead to intelligence suffusing the entire cosmos. At the age of 100, James Lovelock has produced the most important and compelling work of his life.

"Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of International perspectives on spinal cord injury are to: ---assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; ---make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.

Not so long ago Emilio Brentani was a promising young author. Now he is an insurance agent on the fast track to forty. He gains a new lease on life, though, when he falls for the young and gorgeous Angiolina—except that his angel just happens to be an unapologetic cheat. But what begins as a comedy of infatuated misunderstanding ends in tragedy, as Emilio's jealous persistence in his folly—against his friends' and devoted sister's advice, and even his own best knowledge—leads to the loss of the one person who, too late, he realizes he truly loves. Marked by deep humanity and earthy humor, by psychological insight and an elegant simplicity of style, *As a Man Grows Older* (Senilità, in Italian; the English title was the suggestion of Svevo's great friend and admirer, James Joyce) is a brilliant study of hopeless love and hapless indecision. It is a masterpiece of Italian literature, here beautifully rendered into English in Beryl de Zoete's classic translation. -Print ed. "The poem of our complex modern madness."—EUGENIO MONTALE "Svevo has the capacity—so rare as to be almost unknown in the English novel—of handling emotional relationships with a combined tenderness, humour and realism."—THE TIMES LITERARY SUPPLEMENT

ICF Research Branch in cooperation with the WHO Collaborating Centre for the Family of International Classifications in Germany (at DIMDI) Practical, standardized tools to assess and document functioning, disability, and health according to the WHO ICF in a variety of health conditions and settings The WHO's International Classification of Functioning, Disability and Health (ICF) is the accepted common framework for understanding and documenting functioning and disability. The ICF Core Sets selected for this book have now been developed to facilitate the standardized use of the ICF in real-life clinical practice and thus improve quality of care. By using this collection of clear checklists, definitions, and forms, clinicians will quickly and easily be able to assess clients with a range of typical health conditions at different stages and in a variety of health care contexts. This manual: \* Introduces the concepts of functioning and disability \* Describes how and why the ICF Core Sets have been developed \* Shows, step-by-step, how to apply the ICF Core Sets in clinical practice \* Includes all 31 ICF Core Sets plus documentation forms (more than 1,400 pages of printable PDFs) on a CD-ROM. This manual is inherently multi-professional and will be of benefit not only for practitioners working in various health care contexts but also for students and teachers.
