Using Botanicals to Tone Blueprints Naturally Routledge

Cyanotype is the most accessible and frequently used of all the
alternative photographic processes. When utilized properly, it has
the potential to rival other processes when it comes to detail and
tonal range, but its Prussian blue color isn't always suitable for
the final photograph. Throughout history, cyanotype prints have
been toned not only with various—and at times
hazardous—chemicals but also with more natural ingredients like
tea and coffee. Since the cyanotype itself is non-toxic, Cyanotype
Toning will champion an innovative process, developed by the
author, of toning cyanotypes with natural material. This process,
which is easy and reliable, offers a much broader range of
possible colors and even beautiful black and whites. Even
duotone or tricolor prints can be attained. The book consists of
two parts. Part One is a step-by-step how-to section including all
the information that a student at any level needs to achieve a
successfully toned print. Easy-to-understand background
information is provided on how and why the process works so that
readers can venture on their own into the world of natural colors.
The first part also has a detailed section on all the factors that can
influence the outcome, like paper choice, water quality, properties
of the plants, temperature of the bath and the duration of the
toning. Part Two is devoted to contemporary artists who have
explored toning with botanicals and integrated the process into

their creative practice. The book includes: A list of equipment and
supplies needed. In depth information about useful plants and the
specific properties that make them suitable for toning
cyanotypes. Concise step-by-step instructions for printing
cyanotypes successfully. A chart of more than 60 tested papers
with recommendations on paper choice. Step-by-step generic
instructions on toning with botanicals. Troubleshooting toning
with botanicals. More detailed recipes for specific colors with
information about the plants. Step-by-step instructions on how to
print duotone and tricolor prints. A range of creative ideas on how
to use the process in classrooms and with different age groups. A
comprehensive list of more than 380 tested parts of plants and
possible color outcomes. Using botanicals to tone cyanotypes
broadens the color spectrum, enlarges creative possibilities and
makes the cyanotype process even more versatile. The process is
not cut and dried science but a limitless field for discovery and
surprises. Cyanotype Toning provides accessible information and
instructions for readers at all levels. It is comprehensive and
explanatory, so that readers can expand on the subject on their
own, as did the contemporary artists who share their experiences
and the works they have created using this innovative toning
process.

Accompanied by hundreds of previously unpublished archival and contemporary photographs, award-winning historian Daniel Francis delivers a fascinating account of the first hundred years of trucking in BC. Beginning in Vancouver with James Starks first delivery van in 1907, motorized transport exploded in the province, soon traversing every dirt track, hauling logs on temporary plank roads and leading to a frenzy of experimentation and innovation from the failed Renard Road Train and early battery-operated vehicles to some truly impressive purpose-built trucks, many of them manufactured in BC.

The First Conference on the History of Nordic Computing (HiNC1) was organized in Trondheim, in June 2003. The HiNC1 event focused on the early years of computing, that is the years from the 1940s through the 1960s, although it formally extended to year 1985. In the preface of the proceedings of HiNC1, Janis Bubenko, Jr. , John Impagliazzo, and Arne Sølvberg describe well

the peculiarities of early Nordic computing [1]. While developing hardware was a necessity for the first professionals, quite soon the computer became an industrial product. Computer scientists, among others, grew increasingly interested in programming and application software. Progress in these areas from the 1960s to the 1980s was experienced as astonishing. The developments during these decades were taken as the focus of HiNC2. During those decades computers arrived to every branch of large and medium-sized businesses and the users of the computer systems were no longer only computer specialists but also people with other main duties. Compared to the early years of computing

before 1960, where the number of computer projects and applications was small, capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult. The HiNC2 conference attempted to help in this endeavor.
