Key human development theories that continue to guide research and practice are examined in this engaging text. Ten key theories are grouped into three families - those that emphasize biological systems, environmental factors, and those that reflect an interaction between the two. This organization enhances students' ability to evaluate, compare, and contrast theories both within and across families. Each family is introduced with an overview of their unique perspectives and the rationale for grouping them together. Discussion of each theory includes the cultural/historical context during the theory's development, its key concepts and ideas, extensions of the theory in contemporary work, an example showing a modification of the theory, an application of how the theory is used to inform practice, and an analysis of how the theory answers 6 basic questions that a human development theory should address. Each chapter includes an overview of the strengths and weaknesses of the theories to facilitate comparisons. Theories that have a clear lifespan focus along with cases and examples that address issues across the lifespan are included. The second edition features: -A new chapter on bioecological theory that highlights the increased use of this theory in the development of family, school, and community intervention programs. -A new epilogue that examines the same case via each of the ten theories illustrating their similarities and differences and how these ideas cast a unique light on a common situation. -New opening cases that bring theory to life along with narrative that links the case to the chapter's concepts, guiding questions that help students compare theoretical perspectives, critical thinking questions that focus on using the theory to interpret the case and personal life experiences, and recommended resources that extend students' understanding. -More examples from various disciplines that address topics students are likely to encounter as professionals. -A new glossary that defines the boldfaced key terms. -Enhanced website at [www.psyppress.com/9781848726673](http://www.psyppress.com/9781848726673) that provides instructors with a test bank, Power points, discussion questions and activities, additional cases with questions, teaching notes for using the book with various types of majors, and a conversion guide outlining changes to the new edition and students with key terms with hot links to their definitions, chapter summaries and outlines, and additional resources for further study. -Updated research and applications highlight the latest scientific developments. Ideal for advanced undergraduate or beginning graduate courses in theories of development, lifespan or child development taught in psychology, human development, family studies, education, and social work.

Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, the book addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus their change with age. This volume offers a fresh perspective on social cognition and behavior, and shows the value of bringing together different disciplines to illuminate our understanding of the origins, mechanisms, functions, and development of the many capacities that have evolved to facilitate and regulate a wide variety of behaviors fine-tuned to group living.

First published in 2000. Attachment Theory is the current dominant theory of parent-child relationships and their influence on development. The theory has generated an ever-expanding body of empirical work, and is one of the few contemporary comprehensive psychological theories. However, it is also controversial, with researchers generally falling into one or other of two camps. Consequently, most of the books published to date focus on specific aspects of Attachment work, and do not provide students with a view of the theory overall and how it relates to other areas within child development. Susan Goldberg, who has researched parent-child relationships and Attachment methods and theory since the 1960s, is ideally placed in writing this book that provides a coherent overview of the field and its place within child developmental psychology as a whole. She is widely known in the field, and along with many research articles, she has edited a volume on the 'state of the art' in Attachment Theory, published in 1995. In our time, the view that parent-child relationship plays a central role in a child's psychological development has been widely accepted. This was not

always the case. Attachment Theory and the research it generated played an important role in producing the empirical evidence needed to support this view, and over the last 30 years, there has been an explosion of work in this area. 'Attachment and Development' is one of the few comprehensive and critical overviews of the theory and research in Attachment across the lifespan. It provides a detailed examination of the factors that contribute to shaping early Attachment, and the effects of Attachment on development including social competence, mental health and physical health. Special emphasis is given to newly emerging research on the role of cognition and emotion in internal working models of Attachment, as well as to the role of psychobiology. In order to achieve a balanced evaluation of this area as a whole, the book concludes with a critical appraisal of the contributions and limitations of Attachment research and theory. An ideal resource for developmental psychology students, this clear and accessible text also serves as an up-to-date reference for professionals in related disciplines, such as nursing, social work, psychiatry and education.
