 Boards, Modules (a  
 smaller form-factor of  
 classic boards), Shields  
 (elements that can be  
 plugged onto a board to  
 give it extra features),  
 and Kits. If you need more  
 info you can compare the  
 specs of each board  
 here. Arduino -  
 Compare Arduino  
 Comparison Guide This  
 Tutorial is Retired! We  
 have updated this tutorial  
 in " Choosing an Arduino  
 for Your Project." If you  
 are looking to compare

specs of different Arduino boards you can view our [Arduino Comparison Guide](#). Arduino Comparison Guide - [learn.sparkfun.com](#) Arduino hasn't been consistent in terms of USB, using various USB packages on different boards. Arduino UNO and MEGA users have to use USB type B, while LEONARDO, DUE, MICRO, and LILYPAD fans have to use micro USB. NANO and FIO users need mini USB, whereas the YUN board implements USB type A in a vertical right angle. [Arduino](#)

[Buying Guide 2020: Complete Guide to Choose the ...](#)In this comparison guide, we will cover the following smallest Arduino boards currently out there in descending order from small to smallest. Here is the list of boards we are going to look at: Nano; Micro; Pro Mini; Trinket - By Adafruit; Beetle - By DFRobot; Seeeduno XIAO; Atto - By Nionics; Without further ado, let us jump into the first board! [Which Smallest Arduino Board is the best? - Comparison Guide](#) [Arduino Comparison](#)

[Chart](#). The following table compares the basic features of the various Arduinos and Arduino Compatibles mentioned in this guide. (click for a larger view). For shield compatibility, be sure to check our [Shield Compatibility Guide](#). \*On the 32U4 processors there is some overlap between the Analog Input and Digital I/O pins, so the total number of I/O pins will be less than the sum of the two. [Arduino Comparison Chart | Adafruit Arduino Selection ...](#)For a quick cross-

comparison of the available Arduinos, here's a (totally tubular) tabular look at the variety of boards. The boards are sorted by their main microcontroller, which is what defines most of the characteristics for each of them. Arduino Comparison Guide - learn.sparkfun This publicly editable Arduino Comparison Table is a one-stop place to compare key features of Arduino boards, such as Input Voltage, I/O Pins Available, and Connectivity options. Feel free to update

information, make changes, or add new boards. Visit the Google Docs Spreadsheet to use filters and sort by the various parameters. Checks if the value of two operands is equal or not, if values are not equal then condition becomes true. Arduino - Comparison Operators -

Tutorialspoint The Arduino Nano is a tiny, complete and breadboard-friendly board based on the ATmega328 (Arduino Nano 3.x) or ATmega168 (Arduino Nano 2.x). The Nano has more or less the same functionality of the Arduino Duemilanove, but in a different package. It lacks only a DC power jack and works with a Mini-B USB cable instead of a standard one. Arduino Board Comparisons: Picking the Right Board | PubNub Arduino programming language can be divided in three

main parts: functions, values (variables and constants), and structure. functions For controlling the Arduino board and performing computations. Arduino Reference - Arduino Reference On the opposite side of the spectrum, the Arduino Mega 2560 board dimensions are about 4" x 2.1", making it about 6x bigger than the Micro in terms of area size. Arduino Uno dimensions of 2.7" x 2.1" fall somewhere in between the Micro and the Mega 2560. The pricing for

Micro is usually around \$19-25 (can be hard to find stock) while the Uno runs around \$20-23, and the Mega 2560 comes in at \$36 - \$39. Arduino Board Comparison Guide | Arrow.com Updated guide for 2017: <https://www.youtube.com/watch?v=zJjkNJWWclUP> Products Featured in this Video: Arduino Uno: <https://www.sparkfun.com/products/11021> Arduino Comparison Guide - YouTube The Arduino Nano was first released in 2008 and is still one of the most

popular Arduino boards available. The Nano is a breadboard-friendly board, based on the ATmega328 8-bit microcontroller by Atmel (Microchip Technology). It has more or less the same functionality as the Arduino Uno but in a smaller form factor. The only thing that is missing is a DC power jack and it works with a Mini-B ...
