What lies at the center of the Mexican colonial experience? Should Mexican colonial society be construed as a theoretical monolith, capitalist from its inception, or was it essentially feudal, as traditional historiography viewed it? In this pathfinding study, Enrique Semo offers a fresh vision: that the conflicting social formations of capitalism, feudalism, and tributary despotism provided the basic dynamic of Mexico's social and economic development. Responding to questions raised by contemporary Mexican society, Semo sees the origin of both backwardness and development not in

climate, race, or a heterogeneous set of unrelated traits, but rather in the historical interaction of each social formation. In his analysis, Mexico's history is conceived as a succession of socioeconomic formations, each growing within the "womb" of its predecessor. Semo sees the task of economic history to analyze each of these formations and to construct models that will help us understand the laws of its evolution. His premise is that economic history contributes to our understanding of the present not by formulating universal laws, but by studying the laws of development and progression of concrete economic systems. The History of Capitalism in Mexico opens with the Conquest and concludes with the onset of the profound socioeconomic transformation of the last fifty years of the colony, a period clearly representing the precapitalist phase of Mexican development. In the course of his discussion, Semo addresses the role of dependency—an important theoretical innovation—and introduces the concept of tributary despotism, relating it to the problems of Indian society and economy. He also provides a novel examination of the changing role of the church throughout Mexican colonial history. The result is a comprehensive picture, which offers a provocative alternative to the increasingly detailed and monographic approach that currently dominates the writing of history. Originally published as *Historia del capitalismo en México* in 1973, this classic work is now available for the first time in English. It will be of interest to specialists in Mexican colonial history, as well as to general readers.

On the basis of an examination of the colonial mercury and silver production processes and related labor systems, Mercury, Mining, and Empire explores the effects of mercury pollution in colonial Huancavelica, Peru, and Potosí, in present-day Bolivia. The book presents a multifaceted and interwoven tale of what colonial exploitation of indigenous peoples and resources left in its wake. It is a socio-ecological history that explores the toxic interrelationships between mercury and silver production, urban environments, and the people who lived and worked in them. Nicholas A. Robins tells the story of how native peoples in the region were conscripted into the noxious ranks of foot soldiers of proto-globalism, and how their fate, and that of their communities, was—and still is—chained to it.

"This major study suggests that prehispanic metallurgy was adopted in western Mexico ca. AD 600 from northern South America. Presents technical analyses and a comprehensive theory for development of Mesoamerican metallurgy. Argues that metals were a ritual and elite material that expressed sacredness and social relations"--Handbook of Latin American Studies, v. 57.

This book presents selected contributions to the Symposium of Aeronautical and Aerospace Processes, Materials and Industrial Applications of the XXV International Materials Research Congress (IMRC). Each chapter addresses scientific principles behind processing and production of materials for aerospace/aeronautical applications. The chapter deals with microstructural characterization including composites materials and metals. The second chapter deals with corrosion in aerospace components is a large and expensive problema for aerospace industry. Finally, the last chapter covers modeling and simulation of different processes to evaluate and optimize the forming process. This book is meant to be useful to academics and professionals.

This book highlights studies addressing significant anthropological issues in the Americas from the perspective of environmental archaeology. The book uses case studies to resolve questions related to human behavior in the past rather than to demonstrate the application of methods. Each chapter is an original or revised work by an internationally-recognized scientist. This second edition is based on the 1996 book of the same title. The editors have invited back a number of contributors from the first edition to revise and update their chapter. New studies are included in order to cover recent developments in the field or additional pertinent topics.
