The human skull has many functions. The largest component of the skull, the neurocranium, protects and insulates the brain. It comprises the dome-shaped vault or calvaria, obviously a

protective structure, and the more complex cranial base, which gives the vault a massive foundation and also houses the organs of hearing, balance, and smell. The facial skeleton, or splanchnocranium, encloses the upper airway and the mouth. Chewing, the cQ-ordinated action of the jaws and teeth, is a function of the facial skeleton. The orbits, formed from both calvarial and facial bones, house the eyes and their accessory muscles. The skull also provides skeletal support for the muscles which affect speech and facial expression. It is largely by these that people communicate and display their emotions. Personality is judged on speech and on facial appearances, by conscious or subconscious aesthetic comparisons with cultural ideas and prejudices. So the shape of the skull has, or can have, profound emotional significance.

What are some of the central connections between narrative, systemic and attachment therapies? How do early emotional experiences in families shape our narratives about ourselves and our families? In what ways do family attachments shape our narrative abilities, such as being able to reflect on and integrate our experiences? This book sets out a framework for practice – Attachment Narrative Therapy – that provides a new approach to working with families, couples and individuals. This is not offered as a prescriptive model but as an aid and guide to practice that draws aspects of narrative and attachment therapy into systemic work. The synthesis of these ideas offers clinicians a new integrative way to approach their practice – one in which the three approaches are used to create a greater whole than their constituent parts. The book includes: Clinical examples Personal reflections Frameworks for clinical practice Therapeutic guides that include details of the application of core techniques Extensive reading guides that offer connections to related theory and practice Attachment Narrative Therapy is essential reading for a wide variety of therapists and counsellors along with researchers and trainers in those fields. It

also provides insight into good practice for health and social welfare professionals in the area of family and child welfare.

This manual prescribes guidance for designing hydraulic steel structures (HSS) by load and resistance factor design (LRFD) and guidance for fracture control. Allowable stress design (ASD) guidance is provided as an alternative design procedure or for those structure types where LRFD criteria have yet to be developed. Typical HSS are lock gates, tainter gates, tainter valves, bulkheads and stoplogs, vertical lift gates, components of hydroelectric and pumping plants, and miscellaneous structures such as lock wall accessories, local flood protection gates, and outlet works gates. HSS may be subject to submergence, wave action, hydraulic hammer, cavitation, impact, corrosion, and severe climatic conditions.
