- A comprehensive book which collates the experience of two well-known US plastic engineers.
- Enables engineers to make informed decisions.
-

Includes a unique chronology of the world of plastics. The use of plastics is increasing year on year, and new uses are being found for plastics in many industries. Designers using plastics need to understand the nature and properties of the materials which they are using so that the products perform to set standards. This book, written by two very

experienced plastics engineers, provides copious information on the materials, fabrication processes, design considerations and plastics performance, thus allowing informed decisions to be made by engineers. It also includes a useful chronology of the world of plastics, a resource not found elsewhere.

 The Global Positioning

 satellite-based navigation
 system that was originally
 designed for the U.S.

 number of civilian GPS

 identifies technical
 improvements that would
 enhance military, civilian,

 at NASA's Marshall Space
 Flight Center, the Saturn
 V rocket represents the
 pinnacle of 20th Century
 technological
 achievement. The only
 launch vehicle in history
 to transport astronauts
 beyond Low Earth Orbit,
 the Saturn V delivered 24
 men to the moon. To this
 day it holds records as the
 tallest (363 feet), heaviest

(nearly 7 million lbs.) and most powerful (over 7.6 million pounds-force of thrust) launch vehicle ever produced. It also remains one of the most reliable, achieving 12 successful launches with one partial failure - the unmanned Apollo 6 which suffered vibration damage on lift-off, resulting in a sub-standard orbit. The Saturn series of rockets resulted from Von Braun's work on the German V-2 and Jupiter series rockets. The Saturn I, a 2-stage liquid-fueled rocket, flew ten times between 1961

and 1965. An updated version the 1B carried the first crewed Apollo flight into orbit in 1968. The Saturn V, which first flew in 1967, was a three-stage rocket. The first stage, which burned RP-1 and LOX, consisted of five F-1 engines. The second stage used five J-2 engines which burned LOX and liquid hydrogen (LH2). The third stage, based on the second stage of the Saturn 1B, carried a single J-2. The Saturn V could carry up to 262,000 pounds to Low Earth Orbit and more

critically, 100,000 pounds to the Moon. Created by NASA as a single-source reference as to the characteristics and functions of the Saturn V, this manual was standard issue to the astronauts of the Apollo and Skylab eras. It contains information about the Saturn V system, range safety and instrumentation, monitoring and control, prelaunch events, and pogo oscillations. It provides a fascinating overview of the rocket that made "one giant leap

for mankind" possible.

 Warehouses are often seen as a necessary evil: places that stop the flow of goods and thus increase costs without adding value. But the truth is that they have a critical part to play in supply chain management, and warehouse managers should be centrally involved in the strategic aspects of any business.
 Excellence in Warehouse

Management covers everything you need to know to manage warehouse operations as part of a streamlined and holistic system, fine-tuned to serve the customer and drive the bottom-line. With thinking points, self-assessment exercises and case studies Stuart Emmett challenges you to consider your own operations in a new way, and plot a course into the future.

 The takeover boom that began in the mid-1980s

has exhibited many phenomena not previously observed, such as hostile takeovers and takeover defenses, a widespread use of cash as a means of payment for targeted firms, and the acquisitions of companies ranking among the largest in the country. With the aim of more fully understanding the implications of such occurrences, contributors to this volume consider a broad range of issues as they analyze mergers and acquisitions and study the takeover process itself.

Quantitative Methods in Transportation provides the most useful, simple, and advanced quantitative techniques for solving real-life transportation engineering problems. It aims to help transportation engineers and analysts to predict travel and freight demand, plan new transportation networks, and develop various traffic control strategies

that are safer, more cost effective, and greener. Transportation networks can be exceptionally large, and this makes many transportation problems combinatorial, and the challenges are compounded by the stochastic and independent nature of trip-planners decision making. Methods outlined in this book range from linear programming, multi-attribute decision making, data envelopment analysis, probability theory, and simulation to computer

techniques such as genetic algorithms, simulated annealing, tabu search, ant colony optimization, and bee colony optimization. The book is supported with problems and has a solutions manual to aid course instructors.

Marred by political tumult and violent conflict since the early twentieth century, Gaza has been subject to a multiplicity of rulers. Still not part of a sovereign state, it would seem too exceptional to

be a revealing site for a study of government. Ilana Feldman proves otherwise. She demonstrates that a focus on the Gaza Strip uncovers a great deal about how government actually works, not only in that small geographical space but more generally. Gaza's experience shows how important bureaucracy is for the survival of government. Feldman analyzes civil service in Gaza under the British Mandate (1917-48) and the Egyptian Administration (1948-67).

In the process, she sheds light on how governing authority is produced and reproduced; how government persists, even under conditions that seem untenable; and how government affects and is affected by the people and places it governs. Drawing on archival research in Gaza, Cairo, Jerusalem, and London, as well as two years of ethnographic research with retired civil servants in Gaza, Feldman identifies two distinct, and in some ways contradictory, governing

practices. She illuminates mechanisms of "reiterative authority" derived from the minutiae of daily bureaucratic practice, such as the repetitions of filing procedures, the accumulation of documents, and the habits of civil servants. Looking at the provision of services, she highlights the practice of "tactical government," a deliberately restricted mode of rule that makes limited claims about governmental capacity, shifting in response to

crisis and operating without long-term planning. This practice made it possible for government to proceed without claiming legitimacy: by holding the question of legitimacy in abeyance. Feldman shows that Gaza's governments were able to manage under, though not to control, the difficult conditions in Gaza by deploying both the regularity of everyday bureaucracy and the exceptionality of tactical practice.

The diversity of RNAs inside living cells is amazing. We have known of the more "classic" RNA species: mRNA, tRNA, rRNA, snRNA and snoRNA for some time now, but in a steady stream new types of molecules are being described as it is becoming clear that most of the genomic information of cells ends up in RNA. To deal with the enormous load of resulting RNA processing and degradation reactions, cells need adequate and efficient

molecular machines. The RNA exosome is arising as a major facilitator to this effect. Structural and functional data gathered over the last decade have illustrated the biochemical importance of this multimeric complex and its many co-factors, revealing its enormous regulatory power. By gathering some of the most prominent researchers in the exosome field, it is the aim of this volume to introduce this fascinating protein complex as well as to give a timely and rich

account of its many functions. The exosome was discovered more than a decade ago by Phil Mitchell and David Tollervey by its ability to trim the 3' end of yeast, *S. cerevisiae*, 5. 8S rRNA. In a historic account they laid out the events surrounding this identification and the subsequent birth of the research field. In the chapter by Kurt Januszyk and Christopher Lima the structural organization of eukaryotic exosomes and their evolutionary counterparts in bacteria

and archaea are discussed in large part through presentation of structures.

"Islanders of Samoan ancestry living in Fiji belong more to Fiji than to Samoa. They think of Fiji and its many cultures as home. But as a mixed-race minority, this is not always easy. Their status and options both at home and abroad are the focus

of this book. Their future, and that of many other 'expatriate' Islander communities in the South Pacific nations, is important, and likely to become more so as Pacific Islands set out into new forms of association."-- Back cover.

 Gambling Debt is a game-changing contribution to the discussion of economic crises and neoliberal financial systems and strategies. Iceland's 2008 financial

collapse was the first case in a series of meltdowns, a warning of danger in the global order. This full-scale anthropology of financialization and the economic crisis broadly discusses this momentous bubble and burst and places it in theoretical, anthropological, and global historical context through descriptions of the complex developments leading to it and the larger social and cultural implications and consequences. Chapters from anthropologists,

sociologists, historians, economists, and key local participants focus on the neoliberal policies—mainly the privatization of banks and fishery resources—that concentrated wealth among a select few, skewed the distribution of capital in a way that Iceland had never experienced before, and plunged the country into a full-scale economic crisis. *Gambling Debt* significantly raises the level of understanding and debate on the issues relevant to financial

crises, painting a portrait of the meltdown from many points of view—from bankers to schoolchildren, from fishers in coastal villages to the urban poor and immigrants, and from artists to philosophers and other intellectuals. This book is for anyone interested in financial troubles and neoliberal politics as well as students and scholars of anthropology, sociology, economics, philosophy, political science, business, and ethics. über Gefahren - und Nutzen - statischer Elektrizität im industriellen Umfeld. Nach einer Diskussion der Grundlagen zum Verständnis insbesondere von Zündungen infolge elektrostatischer Entladungen untersucht das Buch die Ursachen derartiger Entladungen in der Industrie, wie sie etwa beim Transport von Schüttgütern, Flüssigkeiten oder Kunststoffbahnen auftreten. Der größte Teil des Buches behandelt die Messung statischer

Elektrizität, die Vermeidung unerwünschter Entladungen und Gefahrenabwehr unter verschiedenen Bedingungen. During World War II, the
United States and the
United Kingdom
cooperated in the
successful operation of a
regional organization
which indisputably saved
the Middle East for the
Allied cause and which, if
perpetuated, might have
formed the basis for
regional peace and
stability. This was the
Middle East Supply
Centre, whose creation,
evolution, responsibilities,
and activities are
described analytically in

this volume. It was an
agency, says the author,
"bestriding the Middle
East economy like a giant
and imposing its views
and wishes on the
production and
consumption of nearly
100 million people toiling
in a vast sub-continent."
Even in the midst of
global war, M.E.S.C. not
only supervised the
feeding of the people of
the region, but also
assured that industries
kept producing and that
the economy poured out
large quantities of
munitions and

quartermaster items for Allied armies in the Middle East and beyond. At the end of the war, diverse proposals were made to convert M.E.S.C. into a "regional bureau" that would bring the wartime seeds of regional cooperation to permanent flowering for betterment and peace in the Middle East under the United Nations, under Anglo-American sponsorship, or under the Middle East countries themselves. Failure to obtain American participation resulted in the collapse of these

efforts and M.E.S.C. was dissolved in November 1945. Beyond the author's narrative and analysis of the Centre's wartime logistical activities, he has placed the whole enterprise in a far larger setting: Anglo-American collaboration: the imperious influence of world powers; the aspirations of underdeveloped nations; and the growth in the area of "economic regionalism." Commander Sir Robert Jackson, wartime Director General of the Centre who now

holds appointments with several governments in the Third World and is also Senior Consultant to the United Nations Development Programme, has written the foreword for the book, in which he views the activities--and the legacy--of the Centre from the perspective of more than 25 years. *Purchase of Land for a Naval Special Operations Forces Training Range, Hancock County Infobase Publishing*
