 of producing
 between 600

 horsepower.
 This book
 covers how to

build Mopar's
 383-, 400-,
 413-ci, 440-ci
 engines to
 these power
 levels.
 Discussed is
 how to select
 a stock or

 block for the
 desired
 performance
 level. The
 reciprocating
 assembly is

examined in detail, so you select the right design and material for durability and performance requirements. Cylinder heads and valve train configurations are crucial for generating maximum horsepower and torque and this volume provides special treatment in this area. Camshafts and lifters are compared and contrasted using hydraulic flat tappet, hydraulic

roller and solid flat tappet cams. Also, detailed engine builds at 600, 700, 800, and 900 horsepower levels provide insight and reveal what can be done with real-world component packages.
