"Building Materials for the Environmentally
Hypersensitive was prepared to help
individuals and builders select building
materials that have minimal negative
effects on the health of environmentally

hypersensitive occupants. The materials
included are those typically used in
residential construction in cold climates.
Two kinds of information were used in
evaluating the materials: 1) known or
published information about the products;
and 2) the experiences of hypersensitive
individuals with these materials. The
responses of hypersensitive individuals to
the building materials were used as an
indicator of how these materials affect the
environmentally hypersensitive"--
