Report of the Joint National Committee on Detection, Evaluation, and Treatment of High Blood Pressure McGraw-Hill Medical Publishing
In *Research as Development*, Salla Sariola and Bob Simpson show how international collaboration operates in a setting that is typically portrayed as "resource-poor" and "scientifically lagging." Based on their long-term fieldwork in Sri Lanka, Sariola and Simpson bring into clear ethnographic focus the ways international scientific collaborations feature prominently in the pursuit of global health in

which research operates "as" development and not merely "for" it. The authors follow the design, inception, and practice of two clinical trials: one a global health charity funded trial and the other a pharmaceutical industry-sponsored trial. *Research as Development* situates these two trials within their historical, political and cultural contexts and thus counters the idea that local actors are merely passive recipients of new technical and scientific rationalities. While social studies of clinical trials are beginning to be an established niche in academic writing, *Research as Development* helps fill important gaps in the literature through its examination of clinical research situated in cultures in low-income settings. *Research as Development* is noteworthy for the way it highlights the critical and creative role that local researchers play in establishing international collaborations and making them work into locally viable forms. The volume shows how these clinical and research interactions

bring about changes in culture, technologies and expertise in Sri Lanka, contexts that have not previously been written about in any detail.

In this revised and expanded edition, leading forensic scientist John Trestrail offers a pioneering survey of all that is known about the use of poison as a weapon in murder. Topics range from the use of poisons in history and literature to convicting the poisoner in court, and include a review of the different types of poisons, techniques for crime scene investigation, and the critical essentials of the forensic autopsy. The author updates what is currently known about poisoners in general and their victims. The Appendix has been updated to include the more commonly used poisons, as well as the use of antifreeze as a poison.

Dictionary of Medical Acronyms and Abbreviations McGraw-Hill Education / Medical Biomedical Sciences is an indispensable, all

encompassing core textbook for first/ second year biomedical science students that will support them throughout their undergraduate career. The book includes the key components of the IBMS accredited degree programmes, plus sections on actual practice in UK hospital laboratories (including the compilation of a reflective portfolio). The book is visually exciting, and written in an interesting and accessible manner while maintaining scientific rigour. Highlighted boxes within the text link the theory to actual clinical laboratory practice for example, the histopathology chapter includes a photographically illustrated flow chart of the progress of a specimen through the histopathology lab, so that students can actually see how the specimen reception/inking/cut-up/cassette/block/section/stain system works, with an emphasis on the safety procedures that ensure specimens are not confused).

A Textbook of Modern Toxicology W.B.

Saunders Company This series in Computers and Medicine had its origins when I met Jerry Stone of Springer-Verlag at a SCAMC meeting in 1982. We determined that there was a need for good collections of papers that would help disseminate the results of research and application in this field. I had already decided to do what is now Information Systems for

Patient Care, and Jerry contributed the idea of making it part of a series. In 1984 the first book was published, and-thanks to Jerry's efforts - Computers and Medicine was underway. Since that time, there have been many changes. Sadly, Jerry died at a very early age and cannot share in the success of the series that he helped found. On the bright side, however, many of the early goals of the series have been met. As the result of equipment improvements and the consequent lowering of costs, computers are being used in a growing number of medical applications, and the health care community is very computer literate. Thus, the focus of concern has turned from learning about the technology to understanding how that technology can be exploited in a medical environment.
