GINA RODGERS

Central Corridor Project, Ramsey County Nordic Council of Ministers

A selection of papers from the proceedings of the Third OIKONET Conference is contained in this book. OIKONET is a European project co-funded by the Education, Audiovisual and Culture Executive Agency (EACEA) with the purpose of studying contemporary housing from a multidisciplinary and global perspective by encompassing the multiple dimensions which condition the forms of dwelling in today's societies: architectural, urban, environmental, economic, cultural and social. Following on from the first two OIKONET conferences held respectively in Barcelona, Spain in 2014 and Bratislava, Slovakia in 2015, the third conference took place in Manchester, the UK in 2016. Providing a valuable resource for students, lecturers, researchers and others with an interest in housing studies, the papers included in this book cover three themes, namely sustainability of housing environments, innovation in housing design and planning, and participation in housing design and construction.

Two Decades of Analysis in the Department of Health Springer Science & Business Media

This handbook contributes with new evidence and new insights to the on-going debate on the de-colonization of knowledge on urban planning in Africa. African cities grew rapidly since the mid-20th century, in part due to rising rural migration and rapid internal demographic growth that followed the independence in most African countries. This rapid urbanization is commonly seen as a primary cause of the current urban management

challenges with which African cities are confronted. This importance given to rapid urbanization prevented the due consideration of other dimensions of the current urban problems, challenges and changes in African cities. The contributions to this handbook explore these other dimensions, looking in particular to the nature and capacity of local self-government and to the role of urban governance and urban planning in the poor urban conditions found in most African cities. It deals with current and contemporary urban challenges and urban policy responses, but also offers an historical overview of local governance and urban policies during the colonial period in the late 19th and 20th centuries, offering ample evidence of common features, and divergent features as well, on a number of facets, from intra-urban racial segregation solutions to the relationships between the colonial power and the natives, to the assimilation policy, as practiced by the French and Portuguese and the Indirect Rule put in place by Britain in some or in part of its colonies. Using innovative approaches to the challenges confronting the governance of African cities, this handbook is an essential read for students and scholars of Urban Africa, urban planning in Africa and African Development.

Environmental Impact Statement Routledge

Provides a history and personal commentary on analytical issues from 1984 until 2002 within the Department of Health. This book covers issues such as equity and resource allocation, risk management and emergency planning. It is useful source of reference for academics studying health policy and policy shapers in the media and pressure groups.

Rio Del Oro Specific Plan Project, Sacramento County Kogan Page Publishers

The purpose of this report is to support the preparation of a master plan for The Spit, specifically the context, opportunities and visioning phase (Phase 1). This phase of the project aims to establish important background information to understand the current site conditions, opportunities and challenges. This report examines the strategic and statutory planning context of The Spit, looking at 5 key areas: Community profile; Statutory planning framework; Strategic context; Local planning context; and, Challenges and opportunities.

The market liberalization is expected to affect drastically the operation of power systems, which under economical pressure and increasing amount of transactions are being operated much closer to their limits than previously. These changes put the system operators faced with rather different and much more problematic scenarios than in the past. They have now to calculate available transfer capabilities and manage congestion problems in a near on line environment, while operating the transmission system under extremely stressed conditions. This requires highly reliable and efficient software aids, which today are non-existent, or not yet in use. One of the most problematic issues, very much needed but not yet encountered today, is on-line dynamic security assessment and control, enabling the power system to withstand unexpected contingencies without experiencing voltage or transient instabilities. This monograph is devoted to a unified approach to transient stability assessment and control, called Single Machine Equivalent (SIME).

St.Louis Metro Link Project, St.Louis and East St.Louis (MO,IL) Policy Press

With trust in top-down government faltering, community-based groups around the world are displaying an ever-greater appetite to take control of their own lives and neighbourhoods. Government, for its part, is keen to embrace the projects and the planning undertaken at this level, attempting to regularise it and use it as a means of reconnecting to citizens and localising democracy. This unique book analyses the contexts, drivers and outcomes of community action and planning in a selection of case studies in the global north: from emergent neighbourhood planning in England to the community-based housing movement in New York, and from active citizenship in the Dutch new towns to associative action in Marseille. It will be a valuable resource for academic researchers and for postgraduate students on social policy, planning and community development courses.

Global Dwelling Radcliffe Publishing

Originating from the 3rd Conference on Coastal Cities, the papers contained in this volume presents important research covering the integrated management and sustainable development of coastal cities. An increased world population and the preference for living in coastal regions increases the need for improved resources, infrastructure and services.

Landscape experiences as a cultural ecosystem service in a Nordic context WIT Press

Social Security Administration Electronic Service Provision examines the Social Security Administration's (SSA's) proposed e-government strategy and provides advice on how the SSA can best deliver services to its constituencies in the future. The assessment by the Committee on the Social Security Administration's E-Government Strategy and Planning for the Future was based on (1) its examination of the SSA's current e-government strategy, including technological assumptions, performance measures and targets, planned operational capabilities, strategic requirements, and future goals; (2) its consideration of strategies, assumptions, and technical and operational requirements in comparable public- and private-sector institutions; and (3) its consideration of the larger organizational, societal, and technological context in which the SSA operates.

Background and Context to the Formulation of a New Fremantle Harbours Policy WIT Press

Consisting of presented papers from the 15th International Conference on Urban Regeneration and Sustainability, the included works address various aspects of the urban environment and provide solutions leading towards sustainability. Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution, contributing to the development of social and economic imbalances. As cities continue to grow all over the world, these problems tend to become more acute and require the development of new solutions. The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers is to improve the capacity to manage human activities, pursuing welfare and prosperity in the urban environment. Any investigation or planning on a city ought to consider the relationships between the parts and their connections with the living world. The dynamics of its networks (flows of energy matter, people, goods, information and other resources) are fundamental for an understanding of the evolving nature of today's cities. Large cities represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Coastal areas and coastal cities are an important area covered in this volume as they have some specific features. Their strategic location facilitates transportation and the development of related activities, but this requires the existence of large ports, with the corresponding increase in maritime and road traffic and all its inherent negative effects. This requires the development of well-planned and managed urban environments, not only for reasons of efficiency and economics but also to avoid inflicting environmental degradation that causes the deterioration of natural resources, quality of life and human health. These research papers put a focus on sustainability across the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society.

Draft General Management Plan and Environmental Impact Statement WIT Press

If planning is understood to be about the nature of place, about the way in which we use land, and about the physical expression of the ordering of society, then it becomes apparent that planning as an activity cannot possibly be divorced from the general cultural traditions that inform it. By adopting theoretical approaches from the fields of management studies, cultural studies and anthropology, and by using culture as an organising principle, this book develops an innovative framework which provides better insights into what culture is about, what the relations are between culture and planning and how culture influences planning practices. It introduces a 'culturised planning model', consisting of the analytical dimensions: 'planning artefacts', 'planning environment' and 'societal environment', with which to discover the unconscious routines and

assumptions, emotions and meanings attached to planning systems and the different concepts used in spatial planning systematically. The model offers the possibility of uncovering cultural phenomena in spatial planning by providing relevant cultural dimensions and potential specifications and indicators which has not been the case so far. By comparing examples of German, Finnish and Greek planning habits, the book illustrates cultural influence in planning and provides the readership with a feedback between the micro (experiences of planners) and the macro level (institutional and social context) as well as a more systematic comparison based on cultural values, attitudes, norms and rules.

The aim of this series is to inform both professional philosophers and a larger readership (of social and natural scientists, methodologists, mathematicians, students, teachers, publishers, etc.) about what is going on, who's who, and who does what in contemporary philosophy and PROFILES is designed to present the research activity and the logic. results of already outstanding personalities and schools and of newly emerging ones in the various fields of philosophy and logic. There are many Festschrift volumes dedicated to various philosophers. There is the celebrated Library of Living Philosophers edited by P. A. Schipp whose format influenced the present enterprise. Still they can only cover very little of the contemporary philosophical scene. Faced with a tremendous expansion of philosophical information and with an almost frightening division of labor and increasing specialization we need systematic and regular ways of keeping track of what happens in the profession. PROFILES is intended to perform such a function. Each volume is devoted to one or several philosophers whose views and results are presented and discussed. The profiled philosopher(s) will summarize and review his (their) own work in the main fields of significant contribution. This work will be discussed and evaluated by invited contributors. Relevant historical and/or biographical data, an up-to-date bibliography with short abstracts of the most important works and, whenever possible, references to significant reviews and discussion will also be included.

Draft revised comprehensive conservation plan and environmental impact statement, Kenai National Wildlife Refuge Routledge

This book establishes the foundations needed to realize the ultimate goals for artificial intelligence, such as autonomy and trustworthiness. Aimed at scientists, researchers, technologists, practitioners, and students, it brings together contributions offering the basics, the challenges and the state-of-the-art on trusted autonomous systems in a single volume. The book is structured in three parts, with chapters written by eminent researchers and outstanding practitioners and users in the field. The first part covers foundational artificial intelligence technologies, while the second part covers philosophical, practical and technological perspectives on trust. Lastly, the third part presents advanced topics necessary to create future trusted autonomous systems. The book augments theory with real-world applications including cyber security, defence and space.

Negotiation for Purchasing Professionals Springer

This book constitutes the refereed proceedings of the 11th International Conference on User Modeling, UM 2007, held in Corfu, Greece in July 2007. Coverage includes evaluating user/student modeling techniques, data mining and machine learning for user modeling, user adaptation and usability, modeling affect and meta-cognition, as well as intelligent information retrieval, information filtering and content personalization.

Report of Panel: Medical informatics National Academies Press

Cultural ecosystem services in the form of experiences derived from landscapes are potentially important, but often overlooked. Given the large and unprecedented landscape changes many of the Nordic countries are undergoing, there is a need to find ways of including people's preferences and the value of landscape impacts in policy assessments and decision-making processes. The project aim has been to synthesize knowledge about the magnitude and value of landscape experiences, and investigate current practices and examples of how landscape impacts are incorporated (or not) in policy assessments and decision-making contexts in the Nordics. The literature demonstrates potentially high unaccounted welfare loss from landscape change. We find clear weaknesses in current practices, that a second phase will try to address. The project was carried out by Vista Analysis in Oslo and Department of Environmental Science at Aarhus University from 2014-15.

Environmental Impact Statement

Highly effective negotiation skills are an essential element of a purchasing professional's toolkit. Negotiation for Purchasing Professionals provides a step-by-step approach to delivering winning negotiations and getting game changing results. It provides purchasers with the necessary tools and tactics for a detailed, planned approach to negotiation. Jonathan O'Brien shifts the emphasis away from relying mostly upon personality to a more structured approach that enables anyone to negotiate effectively, even when up against a formidable opponent. This approach allows the purchasing professional or the buying team to evaluate the supplier in advance, assess the sales team, and tailor their negotiation strategy depending on cultural differences, personality traits and game theory. Negotiation for Purchasing Professionals provides a strong framework for discussion in advance of the meeting, allowing the negotiator to plan their agenda, objectives and tactics. The book is based upon Red Sheet Methodology, a proven and collaborative technique used by many companies globally. If you are in a buying role, this book will increase your confidence and transform your ability to secure winning outcomes and better business results. Negotiation for Purchasing Professionals was short listed for the ACA-Bruel Prize and was Specially Commended at the Gala Dinner 2013 organised by the Association of Purchasing and Supply Chain (CESA) of HEC School of Management in Paris. Negotiation for Purchasing Professionals is the perfect companion to Jonathan O'Brien's other books Category Management in Purchasing and Supplier Relationship Management. Used together, they provide a complete and powerful strategic purchasing toolkit.
