Since its creation in
1884, Engineering
Index has covered
virtually every major
engineering innovation
from around the world.

It serves as the
historical record of
virtually every major
engineering innovation
of the 20th century.
Recent content is a
vital resource for
current awareness,
new production
information,
technological
forecasting and
competitive
intelligence. The
world's most

comprehensive interdisciplinary engineering database, Engineering Index contains over 10.7 million records. Each year, over 500,000 new abstracts are added from over 5,000 scholarly journals, trade magazines, and conference proceedings. Coverage spans over 175 engineering disciplines from over 80 countries. Updated weekly.

Sheffield Steel and America Routledge

The book provides an important contribution to the technological and commercial history of crucible and electric steelmaking by thoroughly examining its development in Sheffield and American centres such as Pittsburgh. It also discusses cutlery, saw and file manufacturing,

where the Americans quickly shed Sheffield's traditional technologies and, with the help of superior marketing, established a word lead by 1900. It is also shown, however, that this did not free the US from its dependence on Sheffield steel. Sheffield's innovation in special steelmaking, which began with the Hunstman crucible process in 1742, continued with a series of brilliant 'firsts', which gave the world tool, manganese, silicon, vanadium and stainless steel alloys. Thus the US continued to draw from Sheffield know-how, even in the twentieth century - a transfer of technology that was facilitated by the foundation of Sheffield's own subsidiary firms in America, the history of

which is recounted here.

A complete overview and considerations in process equipment design Handling and storage of large quantities of materials is crucial to the chemical engineering of a wide variety of products. Process Equipment Design explores in great detail the design and construction of the containers - or vessels - required to perform any given task within this field. The book provides an introduction to the factors that influence the design of vessels and the various types of vessels, which are typically classified according to their geometry. The text

then delves into design and other

considerations for the construction of each type of vessel, providing in the process a complete overview of process equipment design.

Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer,

the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. Book News, Inc., Portland, OR (booknews.com). Bulletin Elsevier Metals Reference Book presents a convenient summary of data concerning to metallurgy. It discusses the guidance for dealing with laboratory accidents. It addresses

the radioactive isotopes and radiation sources. Some of the topics covered in the book are the x-ray crystallography; excitation of x-rays; rotating crystal methods; powder methods; the wide angle method; the Laue method; the intensity of x-ray reflections; derivation of accurate unit cell dimensions in crystals; and the schoenflies system of point- and space-group notation. The Hermann-Mauguin system of point- and space-group notation is fully covered. The structures of metals, metalloids, and there compounds is discussed in detail. The text describes in depth the metallurgically important minerals. The metallic systems of unlimited mutual

solubility are presented completely. A chapter is devoted to the respiratory syncytial virus. Another section focuses on the physical properties of molten salts. The book can provide useful information to mineralogists, chemists, students, and researchers.

This facsimile of the rare 1923 Sears catalog "Thrift Book of a Nation" offers a nostalgic look back at consumer items during a nation's recovery from World War I. The catalog featured everything, from automobile accessories to toys.

Standardization

G. D. H. Cole was one of the foremost British socialist thinkers of the twentieth century. His literary output was immense and encompassed works of social theory, economics, political economy, economic history, social and labour history, political theory, history of thought and sociology. The books and pamphlets chosen for this edition are amongst his most significant. They are representative of the different phases of his thinking and illustrative of an acute and inquiring socialist mind as it wrestled with the formidable political and intellect challenges confronted by socialists in this most turbulent

of centuries. This set re-issues 10 works of the well-known socialist thinker G. D. H. Cole and one volume of collected pamphlets, originally published between 1917 and 1956. The works in this collection encompass three critical periods of Cole's socialist thinking: the guild socialist decade from 1913-23; the post 1929 period when his political economy was dominated by the notion of socialist economic intervention and planning, and the post-war period when, like other socialist theorists, he sought to come to terms with the particular challenges posed by the legacy of the Attlee governments, and the emergence of an affluent society. A

substantial introduction by Noel Thompson places the works in their social, political and historical context and illustrates their continued relevance. For institutional purchases for e-book sets please contact online.sales@tandf.co.uk (customers in the UK, Europe and Rest of World)
