Now enhanced with the innovative DE Tools CD-ROM and the iLrn teaching and learning system, this proven text explains the "how" behind the material and strikes a balance between the

analytical, qualitative, and quantitative approaches to the study of differential equations. This accessible text speaks to students through a wealth of pedagogical aids, including an abundance of examples, explanations, "Remarks" boxes, definitions, and group projects. This book was written with the student's understanding firmly in mind. Using a straightforward, readable, and helpful style, this book provides a thorough treatment of boundary-value problems and partial differential equations.

English in Mind Level 1 Student's Book with DVD-ROM Cambridge University Press

Filled with an abundance of complex mysteries, sequences, series, puzzles, mazes, and problems, a perplexing journey through the realm of math, mind, and meaning with the author, Dorothy, and Dr. Oz introduces readers to numbers and their role in creativity, computers, games, and practical research. Neil deGrasse Tyson's #1 New York Times best-selling guide to the cosmos, adapted for young readers. From the basics of physics to big questions about the nature of space and time, celebrated astrophysicist and science communicator Neil deGrasse Tyson breaks down the mysteries of the cosmos into bite-sized pieces. Astrophysics for Young People in a Hurry describes the fundamental rules and unknowns of our universe clearly—and with Tyson's characteristic wit, there's a lot of fun thrown in, too. This adaptation by Gregory Mone includes full-color photos, infographics, and extra explanations to make even the trickiest concepts accessible. Building on the wonder inspired by outer space, Astrophysics for Young People in a Hurry introduces an exciting field and the principles of scientific inquiry to young readers.

Illustrated workbook for learning, practicing, and mastering pre-algebra mathematics.

Algebra (Baldor) Jones & Bartlett Publishers

With its comprehensive coverage of hydraulics and hydrology in a non-calculus format, the Fourth Edition of INTRODUCTION TO HYDRAULICS & HYDROLOGY continues the same straightforward, practical approach that has made previous editions so popular.

Designed to provide readers with an understanding of the concepts of hydraulics and surface water hydrology as they are used in everyday practice, this edition contains multiple opportunities for practice and real-world applications that are relevant to civil engineering, land developing, public works, and land surveying. Coverage includes topics such as the history of water engineering, basic concepts of computation and design, principles of hydrostatics and hydrodynamics, open channel flow, unit hydrographs, and rainfall, runoff, and routing. Up-to-date, clearly solved examples are included throughout the book to help readers understand how concepts apply in the real-world.

'I have a truly marvellous demonstration of this proposition which this margin is too narrow to contain.'

Pre-Algebra Concepts Multilingual Matters

Why narrative is essential to mathematics Circles Disturbed brings together important thinkers in mathematics, history, and philosophy to explore the relationship between mathematics and narrative. The book's title recalls the last words of the great

Greek mathematician Archimedes before he was slain by a Roman soldier—"Don't disturb my circles"—words that seem to refer to two radically different concerns: that of the practical person living in the concrete world of reality, and that of the theoretician lost in a world of abstraction. Stories and theorems are, in a sense, the natural languages of these two worlds—stories representing the way we act and interact, and theorems giving us pure thought, distilled from the hustle and bustle of reality. Yet, though the voices of stories and theorems seem totally different, they share profound connections and similarities. A book unlike any other, *Circles Disturbed* delves into topics such as the way in which historical and biographical narratives shape our understanding of mathematics and mathematicians, the development of "myths of origins" in mathematics, the structure and importance of mathematical dreams, the role of storytelling in the formation of mathematical intuitions, the ways mathematics helps us organize the way we think about narrative structure, and much more. In addition to the editors, the contributors are Amir Alexander, David Corfield, Peter Galison, Timothy Gowers, Michael Harris, David Herman, Federica La Nave, G.E.R. Lloyd, Uri Margolin, Colin McLarty, Jan Christoph Meister, Arkady Plotnitsky, and Bernard Teissier.

The Algebra of Mohammed Ben Musa. Ed. and Transl. by Frederic Rosen Lotus Press (WI)

En esta clara guía, Alma Flor Ada, Isabel Campoy y Colin Baker, ofrecen una perspectiva realista de las alegrías y dificultades de educar a niños bilingües y claras respuestas a las preguntas más frecuentes sobre el tema. Esta versión revisada y adaptada al bilingüismo español-inglés, incluye información sobre el

bilingüismo en la era digital e incorpora investigaciones recientes sobre la mezcla de idiomas, el efecto que los hermanos tienen en la elección del idioma familiar, los efectos intelectuales del bilingüismo, y sus consecuencias en la personalidad, la identidad, y la auto estima. Además añade (a) una sección dirigida a los educadores sobre cómo mejor apoyar la interacción hogar-escuela; (b) el desarrollo de la lecto-escritura en el hogar; y (c) sugerencias de lecturas para adultos y niños.

Algebra and Trigonometry W. W. Norton & Company

The ultimate guide to understanding biology Have you ever wondered how the food you eat becomes the energy your body needs to keep going? The theory of evolution says that humans and chimps descended from a common ancestor, but does it tell us how and why? We humans are insatiably curious creatures who can't help wondering how things work—starting with our own bodies. Wouldn't it be great to have a single source of quick answers to all our questions about how living things work? Now there is. From molecules to animals, cells to ecosystems, *Biology For Dummies* answers all your questions about how living things work. Written in plain English and packed with dozens of enlightening illustrations, this reference guide covers the most recent developments and discoveries in evolutionary, reproductive, and ecological biology. It's also complemented with lots of practical, up-to-date examples to bring the information to life. Discover how living things work Think like a biologist and use scientific methods Understand lifecycle processes Whether you're enrolled in a biology class or just want to know more about this fascinating and ever-evolving field of study, *Biology For Dummies* will help you unlock the mysteries of how life works.

Paradise Reclaimed Patria

An idealistic Icelandic farmer journeys to Mormon Utah and back in search of paradise in this captivating novel by Nobel Prize—winner Halldor Laxness. The quixotic hero of this long-lost classic is Steinar of Hlidar, a generous but very poor man who lives peacefully on a tiny farm in nineteenth-century Iceland with his wife and two adoring young children. But when he impulsively offers his children's beloved pure-white pony to the visiting King of Denmark, he sets in motion a chain of disastrous events that leaves his family in ruins and himself at the other end of the earth, optimistically building a home for them among the devout polygamists in the Promised Land of Utah. By the time the broken family is reunited, Laxness has spun his trademark blend of compassion and comically brutal satire into a moving and spellbinding enchantment, composed equally of elements of fable and folklore and of the most humble truths.

Astrophysics for Young People in a Hurry Patria

An introduction to the Calculus, with an excellent balance between theory and technique. Integration is treated before differentiation--this is a departure from most modern texts, but it is historically correct, and it is the best way to establish the true connection between the integral and the derivative. Proofs of all the important theorems are given, generally preceded by geometric or intuitive discussion. This Second Edition introduces the mean-value theorems and their applications earlier in the text, incorporates a treatment of linear algebra, and contains many new and easier exercises. As in the first edition, an interesting historical introduction precedes each important new concept.

Russian Mathematics Education Richard W. Fisher Publisher

A classic text and standard reference for a generation, this volume covers all undergraduate algebra topics, including groups, rings, modules, Galois theory, polynomials, linear algebra, and associative algebra. 1985 edition.

Intermediate Algebra Saunders

This second edition updates a course which has proven to be a perfect fit for classes the world over. Engaging content and a strong focus on grammar and vocabulary combine to make this course a hit with both teachers and students. Popular course features have been refreshed with new content, including the imaginative reading and listening topics, 'Culture in Mind', and 'Everyday English' sections. New for the second edition is a DVD-ROM with the Level 1 Student's Book containing games, extra exercises and videos featuring the photostories' characters as well as a 'Videoke' record-yourself function. There is a full 'Vocabulary bank' at the back of the book which expands upon lexical sets learned in the units.

2.a edición Simon & Schuster

This anthology, consisting of two volumes, is intended to equip background researchers, practitioners and students of international mathematics education with intimate knowledge of mathematics education in Russia. Volume I, entitled The History and Relevance of Russian Mathematics Education, consists of several chapters written by distinguished authorities like Jeremy Kilpatrick and Bruce Vogeli. It examines the history of mathematics education in Russia and its relevance to mathematics education throughout the world. The second volume, entitled Programs and Practices will examine specific

Russian programs in mathematics, their impact and methodological innovations. Although Russian mathematics education is highly respected for its achievements and was once very influential internationally, it has never been explored in depth. This publication does just that.

[Prealgebra, Beginning Algebra, & Intermediate Algebra](#) Cengage Learning

The New York Times bestselling author of *Buddha and Jesus* weaves together historical narrative, mystery, exciting adventure, and intrigue in this masterfully told novel that reveals surprising discoveries about the unknown last disciple of Christ, and a new understanding of who Jesus was in his final days. When a solid gold reliquary missing from a church in Belgium suddenly resurfaces in America, a young newspaperman begins to investigate the story. At first, it seems like just another case of a treasure stolen during World War II that has resurfaced. But it soon becomes apparent that much more is at stake. Hidden

within the medieval reliquary is a gold box that holds a sacred relic—a single finger bone—from an anonymous saint. Why would the remains of someone unknown to the Church be considered holy? The search for answers leads to a shocking discovery—a dangerous secret known only to a small band of people. If one touches the reliquary, a sacred vision is received—a vision involving a young girl who had a chance encounter with Jesus just before he was crucified. The few people who have been blessed with these miraculous messages have banded together into a mysterious school, a closed society that preserves this venerated wisdom. But their knowledge of the young girl and Jesus is at once so fascinating yet so highly controversial that it cannot be shared with the world. This young girl, curious about the charismatic man named Jesus, embarks on a quest to find out who he really was. What she finds—the knowledge the society protects—is at times far different from the accepted gospels. Could this unknown girl be the 13th Disciple—the last and truest apostle of Christ?
