Analysis of Integrated and Cointegrated Time Series with RCointegration is a statistical property of a collection (X_1, X_2, \dots, X_k) of time series variables. First, all of the series must be integrated of order d (see Order of integration). Next, if a linear combination of this collection is integrated of order less than d , then the collection is said to be co-integrated. Formally, if (X, Y, Z) are each integrated of order d , and there exist coefficients a, b, c such that $aX + bY + cZ$ is integrated of order less than d , then X, Y , and Z are cointegrated.

CoCointegration - WikipediaA cointegration test is used to establish if there is a correlation between several time series.

Time Series Data Analysis Time series data analysis is the analysis of datasets that change over a period of time. Time series datasets record observations of the same variable over various points of time. Financial analysts use time series data such as stock price movements, or a company's sales over time.
