Emerging Risks in the 21st Century An Agenda for Action

Oxford University Press
Reports on a new
generation of Internet
controls that establish a
new normative terrain in
which surveillance and
censorship are routine.
Internet filtering,
censorship of Web
content, and online
surveillance are
increasing in scale, scope,
and sophistication around
the world, in democratic
countries as well as in
authoritarian states. The
first generation of Internet

controls consisted largely
of building firewalls at key
Internet gateways;
China's famous "Great
Firewall of China" is one
of the first national
Internet filtering systems.
Today the new tools for
Internet controls that are
emerging go beyond mere
denial of information.
These new techniques,
which aim to normalize
(or even legalize) Internet
control, include targeted
viruses and the
strategically timed
deployment of distributed
denial-of-service (DDoS)
attacks, surveillance at
key points of the
Internet's infrastructure,
take-down notices,
stringent terms of usage
policies, and national
information shaping
strategies. Access
Controlled reports on this
new normative terrain.
The book, a project from
the OpenNet Initiative
(ONI), a collaboration of
the Citizen Lab at the
University of Toronto's
Munk Centre for
International Studies,
Harvard's Berkman Center
for Internet and Society,
and the SecDev Group,
offers six substantial
chapters that analyze
Internet control in both
Western and Eastern
Europe and a section of
shorter regional reports
and country profiles

drawn from material
gathered by the ONI
around the world through
a combination of technical
interrogation and field
research methods.

Science communication,
as a multidisciplinary
field, has developed
remarkably in recent
years. It is now a distinct
and exceedingly dynamic
science that melds
theoretical approaches
with practical experience.
Formerly well-established
theoretical models now
seem out of step with the
social reality of the
sciences, and the
previously clear-cut
delineations and
interacting domains
between cultural fields
have blurred.
*Communicating Science in
Social Contexts* examines
that shift, which itself
depicts a profound
recomposition of
knowledge fields,
activities and
dissemination practices,
and the value accorded to
science and technology.
*Communicating Science in
Social Contexts* is the
product of long-term
effort that would not have
been possible without the
research and expertise of
the Public Communication

of Science and Technology (PCST) Network and the editors. For nearly 20 years, this informal, international network has been organizing events and forums for discussion of the public communication of science.

Were there Vikings in Finland? *Fibula, Fabula, Fact - The Viking Age in Finland* is intended to provide essential foundations for approaching the Viking Age in Finland. The volume consists of a general introduction followed by nineteen chapters and a closing discussion. The nineteen chapters are oriented to provide introductions to the sources, methods and perspectives of diverse disciplines. Discussions are presented from fields including archaeology, folklore studies, genetics, geopolitics, historiography, language history, linguistics, palaeobotany, semiotics and toponymy. Each chapter is intended to help open the resources and the history of discourse of the particular discipline in a way that will be accessible to specialists from other fields, specialists from

outside Finland, and also to non-specialist readers and students who may be more generally interested in the topic.

From the Treaty of Versailles to the 2018 centenary and beyond, the history of the First World War has been continually written and rewritten, studied and contested, producing a rich historiography shaped by the social and cultural circumstances of its creation. Writing the Great War provides a groundbreaking survey of this vast body of work, assembling contributions on a variety of national and regional historiographies from some of the most prominent scholars in the field. By analyzing perceptions of the war in contexts ranging from Nazi Germany to India's struggle for independence, this is an illuminating collective study of the complex interplay of memory and history.

This book presents and analyzes the concept of online brand communities, an emerging and exciting topic in marketing and eCommerce. First, it lays out the foundations like the evolution of the Web and the so-called Social Web, its utility for users and businesses, and the evolution of the marketing mind-set to adapt the Social Web. On this basis, the book then presents a detailed analysis of online brand communities, examining the concept of virtual community with a specific focus on virtual brand communities. In this context the book also explores recent trends related to branding and brand management. Next, it proposes a classification system for online brand

communities, taking into account questions like the motivating factors for consumers to join, participate and stay in a community. The process of value creation in communities is examined from both business and consumer perspectives. The book draws to a close with a brief presentation of the process broadly accepted for the successful development of online brand communities.

Kathy Charmaz is one of

the world's leading theorists and exponents of grounded theory. In this important and essential new textbook, she introduces the reader to the craft of using grounded theory in social research, and provides a clear, step-by-step guide for those new to the field. Using worked examples throughout, this book also maps out an alternative vision of grounded theory put forward by its founding thinkers, Glaser and Strauss. To Charmaz, grounded theory must move on from its positivist origins and must incorporate many of the methods and questions posed by constructivists over the past twenty years to become a more nuanced and reflexive practice.

Communicating Science Univ of California Press
Modern science communication has emerged in the twentieth century as a field of study, a body of practice and a profession—and it is a practice with deep historical roots. We have seen the birth of interactive science centres, the first university actions in teaching and conducting research, and a sharp growth in employment of science communicators. This collection charts the emergence of modern science communication across the world. This is the first volume to map investment around the globe in science centres,

university courses and research, publications and conferences as well as tell the national stories of science communication. How did it all begin? How has development varied from one country to another? What motivated governments, institutions and people to see science communication as an answer to questions of the social place of science? *Communicating Science* describes the pathways followed by 39 different countries. All continents and many cultures are represented. For some countries, this is the first time that their science communication story has been told.

Over three decades, Paul Griffiths's survey has remained the definitive study of music since the Second World War; this fully revised and updated edition re-establishes *Modern Music and After* as the preeminent introduction to the music of our time. The disruptions of the war, and the struggles of the ensuing peace, were reflected in the music of the time: in Pierre Boulez's radical reformation of compositional technique and in John Cage's development of zen

music; in Milton Babbitt's settling of the serial system and in Dmitry Shostakovich's unsettling symphonies; in Karlheinz Stockhausen's development of electronic music and in Luigi Nono's pursuit of the universally human, in Iannis Xenakis's view of music as sounding mathematics and in Luciano Berio's consideration of it as language. The initiatives of these composers and their contemporaries opened prospects that haven't yet stopped unfolding. This constant expansion of musical thinking since 1945 has left us with no singular history of music; Griffiths's study accordingly follows several different paths, showing how and why they converge and diverge. This new edition of *Modern Music and After* discusses not only the music of the fifteen years that have passed since the previous edition, but also the recent explosion of scholarly interest in the latter half of the twentieth century. In particular, the book has been expanded to incorporate the variety of responses to the modernist impasse experienced by composers of the 1980s and 1990s. Griffiths then

moves the book into the twenty-first century as he examines such highly influential composers as Helmut Lachenmann and Salvatore Sciarrino. For its breadth, wealth of detail, and characteristic wit and clarity, the third edition of

Modern Music and After is required reading for the student and the enquiring listener.
