Voting and Political Representation in America [2 volumes] Springer

This book constitutes the refereed proceedings of the 17th International Conference on Applications of Natural Language to Information Systems, held in Groningen, The Netherlands, in June 2012. The 12 full papers, 24 short papers and 16 poster papers presented in this volume together with a full-paper length invited talks were carefully reviewed and selected from 90 submissions. The rapidly evolving state-of-the-art in NLP and the shifting interest to applications targeting document and data collections available on the Web, including an increasing amount of user generated content, is reflected in the contributions to this book. Topics covered are information retrieval, text classification and clustering, summarization, normalization of user generated content, "forensic" NLP, ontologies and natural language, sentiment analysis, question answering and

information extraction, terminology and named entity recognition, and NLP tools development.

Analysis of Images, Social Networks and Texts

Springer Nature
 This book presents cutting-edge research in translation studies, offering stimulating discussions on translation and providing fresh perspectives on the field. Papers in Translation Studies features a selection of papers originally authored for this volume, addressing a variety of issues from different points of view and offering interesting contributions to the critical literature of the field. The volume provides useful resources that will be of great benefit for academics, students and practitioners. The contributions to this book promote research on translation theory and practice, and suggest ways of dealing with translation problems. The volume chapters are written by researchers from around the world, and consider various different languages and contexts. Areas of investigation include contrastive linguistics and translation, corpus-based translation studies, natural language

processing, machine translation, and translator training.

Leading Successfully in Asia Springer

This book examines the essence of leadership, its characteristics and its ways in Asia through a cultural and philosophical lens. Using Asian proverbs and other quotes, it discusses leadership issues and methods in key Asian countries including China, India, Japan, Kazakhstan, Malaysia and Singapore. It also explores the leadership styles of various great Asian political and corporate leaders. Further, it investigates several unique Asian philosophies, such as Buddhism, Guan Yin, Confucianism, Ta Mo, Chinese Animal zodiac signs, Hindu Gods, the Samurai, the Bushido Spirit and Zen in the context of leadership mastery and excellence. Offering numerous examples of a potpourri of the skills and insights needed to be a good, if not a great, leader, this practical, action-oriented book encourages readers to think, reflect and act.
Natural Language Processing and Information Systems IGI Global
 From the Founding Fathers through the

present, Christianity has exercised powerful influence in the United States—from its role in shaping politics and social institutions to its hand in inspiring art and culture. The Encyclopedia of Christianity in the United States outlines the myriad roles Christianity has played and continues to play. This masterful five-volume reference work includes biographies of major figures in the Christian church in the United States, influential religious documents and Supreme Court decisions, and information on theology and theologians, denominations, faith-based organizations, immigration, art—from decorative arts and film to music and literature—evangelism and crusades, the significant role of women, racial issues, civil religion, and more. The first volume opens with introductory essays that provide snapshots of Christianity in the U.S. from pre-colonial times to the present, as well as a statistical profile and a timeline of key dates and events. Entries are organized from A to Z. The final volume closes with essays exploring impressions of Christianity in the United States from

other faiths and other parts of the world, as well as a select yet comprehensive bibliography. Appendices help readers locate entries by thematic section and author, and a comprehensive index further aids navigation. **Lebanon** Bloomsbury Publishing USA
As metropolises continue to see a growth in population, planners are continually searching for trending methods for utilizing space and seeking the best geographical arrangements for these cities. Professionals have continually used geographic information systems (GIS) to solve these issues; however, limitations in this technology remain prevalent. Integrating multiple-criteria decision analysis and evolutionary computing tools with GIS has created an array of robust solutions for spatial optimization problems in densely populated areas. *Interdisciplinary Approaches to Spatial Optimization Issues* is a pivotal reference source that provides vital research on advancements within the field of GIS and evolutionary solutions for spatial optimization

issues. While highlighting topics such as computing machinery, vehicular routing, and operational research, this publication is ideally designed for practitioners, technicians, developers, academicians, students, government officials, planners, and researchers seeking current research on applications and improvements within spatial optimization and GIS.

Neuro-Linguistic Programming BRILL

The last decade has been one of dramatic progress in the field of Natural Language Processing (NLP). This hitherto largely academic discipline has found itself at the center of an information revolution ushered in by the Internet age, as demand for human-computer communication and information access has exploded. Emerging applications in computer-assisted information production and dissemination, automated understanding of news, understanding of spoken language, and processing of foreign languages have given impetus to research that resulted in a new generation of robust tools, systems, and commercial products. Well-positioned

government research funding, particularly in the U. S. , has helped to advance the state-of-the-art at an unprecedented pace, in no small measure thanks to the rigorous 1 evaluations. This volume focuses on the use of Natural Language Processing in Information Retrieval (IR), an area of science and technology that deals with cataloging, categorization, classification, and search of large amounts of information, particularly in textual form. An outcome of an information retrieval process is usually a set of documents containing information on a given topic, and may consist of newspaper-like articles, memos, reports of any kind, entire books, as well as annotated image and sound files. Since we assume that the information is primarily encoded as text, IR is also a natural language processing problem: in order to decide if a document is relevant to a given information need, one needs to be able to understand its content. Reflective Development through the Care Model Rowman & Littlefield How people think and how they respond to challenges and to other people varies from one

individual to another depending on their beliefs, values, memories and past experiences. Some people respond more effectively than others. Understanding how they do this - and how you can follow their example by changing your thinking and beliefs - lies at the heart of neuro-linguistic programming (NLP). NLP will improve the way you interact and communicate with others; it will improve your self-esteem and raise your motivation. In fact, it will impact positively on all aspects of your business and private life. The NLP Pocketbook looks at the key principles of NLP and how it can make a difference to you. It describes how you are limited by your beliefs and thoughts and how you can change them for the better. There are sections on the brain, on language and on how to create your own personal resource bank. Theory and Practice of NLP Coaching Universal Reference Publications The secret to great writing lies in learning how to alternate between three mindsets: Dreamer, Realist and Critic. The author will tell you exactly how to get into each mindset and how to apply

it. This book will teach you the NLP models for creativity, tenacity and meticulous attention to detail. Read this book and you'll know how to write persuasively, hypnotically and prolifically. *Encyclopedia of Library and Information Sciences* FriesenPress Written by Tad James and Wyatt Woodsmall, *Time Line Therapy and the Basis of Personality* is a compelling study of the important elements that make up a person's core personality, and a detailed exploration of and introduction to how Time Line therapy works in practice. Utilizing discoveries made by Richard Bandler, *Time Line Therapy and the Basis of Personality* expands and updates our knowledge of how people actually store their memories, and sheds light on the effect that the system used for memory storage has on the individual. The authors contend that the concept of Time Line, or the notion of time that you have stored in your mind, shapes and structures your experience of the world, and consequently shapes your personality. Time Line therapy is therefore based on the premise that the client

goes back to the first time they remember a particular problem, does change work utilizing Neuro Linguistic Programming (NLP) to eliminate irritating behaviors or issues and, if necessary, goes to subsequent times when their behavior or response was a problem, and undertakes further change work to resolve it. Written in an informative and engaging manner, Time Line Therapy and the Basis of Personality offers readers the opportunity to see how Time Line therapy works providing a clear description of how to elicit the Time Line, and sharing step-by-step methods to subsequently help the client to release a limiting decision or trauma, remove anxiety, or set a future goal. All of these key aspects are explained using clear language and easy-to-follow steps, and the authors' expert commentary is further complemented by examples, exercises and transcripts in order to help the reader transfer the theory into effective practice. In Section I, the authors explain the NLP Communication Model and share their in-depth analysis of the filters

values, beliefs, attitudes, decisions, memories and meta programs which we subconsciously use as we process the world around us and which form the basis of our personalities. Section II provides a comprehensive description of the Time Line and how it works: laying down a theoretical basis for the technique before offering insight into its practice and application with a demonstrative transcript of Time Line elicitation and change work in order to illustrate the concepts explored. In Section III the authors move on to carefully survey simple and complex meta programs (and how they can be changed) before exploring the formation, evolution and changing of values in Section IV, which includes a helpful exercise that gives guidance on how to elicit values from the client. Exploring many interesting contexts and how personality can be positively changed to help people live happier lives, Time Line Therapy and the Basis of Personality is a worthy addition to any therapist's or NLP practitioner's library and is suitable reading for anyone interested in behavioral change. Sections include: Section I

Introduction; Section II Time Line Therapy; Section III Meta Programs; Section IV Values. Time Line Therapy and the Basis of Personality was originally published in 1988 by Meta Publications. *Encyclopedia of Christianity in the United States* Oxford University Press, USA This book explores the unintended and unanticipated effects associated with 'modernization' projects and tackles the key question that they provoke - why do policy-makers persist in such enterprises in the face of evidence that they tend to fail? Paradoxes of Modernization first discusses what is meant by 'modernization' and 'unintended consequences', placing public policy reform within more general intellectual and social trends. It presents eight case study 'modernization' projects. Their architects promised faster trains, a more efficient and reactive health service, a more motivated public service, better performing local government, enhanced information for prospective US university students, reduced rates of child malnutrition in

developing countries, and a free, open, safe, interconnected cyberspace for people to conduct their social and political life. Each case provides a neat story with a paradox that varies the modernization theme and tackles the question: why was the project pursued? The conclusion categorizes the cases in terms of their outcome, from success to disappointment, and suggests some strategies for a more balanced version of modernization for current and future policy-makers

NLP Pocketbook Red Wheel/Weiser

Whether you are a newcomer or a seasoned professional, *Presenting Magically* will provide you with masterful tips and techniques to transform your presenting skills. "A treasure trove of information on how to acquire the skills of a world class presenter."

EVALITA 2023 is an initiative of AILC (Associazione Italiana di Linguistica Computazionale) and it is endorsed by the Italian Association for Artificial

Intelligence (AIxIA) and the Italian Association for Speech Sciences (AISV). As in the previous editions, EVALITA 2023 is organized along a set of selected tasks, which provide participants with opportunities to discuss and explore both emerging and traditional areas of Natural Language Processing and Speech for Italian. The participation is encouraged for teams working both in academic institutions and industrial organizations.

EVALITA Proceedings of the Eighth Evaluation Campaign of Natural Language Processing and Speech Tools for Italian Final Workshop Pearson Education India

The book explores the affairs of Mount Lebanon and its surrounds through fourteen centuries, beginning with the emergence of its Christian, Muslim and Islamic-derived communities between the sixth and eleventh centuries. Against this backdrop, it interprets the modern republic of Lebanon from Ottoman antecedents to present day crises.

Fantastical Mandala Adult Coloring Book

Springer Nature

The Pacific Symposium on Biocomputing (PSB) 2019

is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2019 will be held on January 3 - 7, 2019 in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2019 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions

are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's 'hot topics.' In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

Bibliographia Karaitica

Crown House Publishing
Comprehensively presents the foundations and leading application research in medical informatics/biomedicine. The concepts and techniques are illustrated with detailed case studies. Authors are widely recognized professors and researchers in Schools of Medicine and Information Systems from the University of Arizona, University of Washington, Columbia University, and Oregon Health & Science University. Related Springer title, Shortliffe: Medical Informatics, has sold over 8000 copies. The title will be positioned at the upper division and graduate level Medical Informatics course and a reference work for practitioners in the field. *National Library of Medicine Audiovisuals Catalog* SAGE
The Encyclopedia of

Library and Information Sciences, comprising of seven volumes, now in its fourth edition, compiles the contributions of major researchers and practitioners and explores the cultural institutions of more than 30 countries. This major reference presents over 550 entries extensively reviewed for accuracy in seven print volumes or online. The new fourth edition, which includes 55 new entries and 60 revised entries, continues to reflect the growing convergence among the disciplines that influence information and the cultural record, with coverage of the latest topics as well as classic articles of historical and theoretical importance.

Papers in Translation

Studies Cambridge Scholars Publishing
Addressing the need for a discerning, research-based discussion of NLP, this book seeks to answer the many questions that clients, potential users and practitioners ask, including: what is NLP and what can it best be used for? This book looks at the research and theory behind NLP, also exploring claims that it is a 'pseudoscience'.

Stress has three main fuels: worry, fear, and doubt. They act like little serpents that crawl into the lap of your life and wreak havoc emotionally, spiritually, and physically. But you have the ability to identify and dismiss these serpents that are trying to hinder your ability to maintain inner calm, clarity of focus, and a motivated response to all of life. *5 Minutes to Stress Relief* will give you the specific skills and tools to: Identify and relieve stress
Access personal excellence in your thought life to create positive transformation in your physical, emotional, and spiritual experiences
Activate your God-given natural state of being
Stress is often called the silent killer. As someone who battled the stress of advanced cancer and divorce—simultaneously—Lauren equips you with the ability to successfully handle any stressful situation...instantly.
The Portrayal of Literacy in Children's Picture Storybooks about African Americans CRC Press
Examines voting trends and political representation in the United States today—with a special focus on debates over voting rights, voter

fraud, and voter suppression—and election rules and regulations, including those related to gerrymandering, campaign fundraising, and other controversial subjects. Do average Americans have a voice in Washington? Are they well-represented, or are they marginalized? Do elections reflect fundamental democratic institutions and values, or are they tarnished by voter suppression, voter fraud, gerrymandering, or other factors? To what extent do America's elected officials reflect the diversity of race, religion, gender, socioeconomic background, sexual

orientation, and political views of the wider American population? This encyclopedia explores all these questions and more. It examines important mechanisms and laws shaping political representation in America in the 21st century, such as term limits, gerrymandering, the Electoral College, and "direct democracy" (ballot initiatives and referendums); and the degree to which various demographic groups are represented in state and federal legislatures, from Latinos and senior citizens to atheists and residents of rural states. It also

explains the basis for escalating concerns about both voter fraud and voter suppression.

5 Minutes to Stress Relief
Springer

Tim is a criminal - and it's no surprise. After growing up amidst the terrors of a violent and alcoholic stepfather, a neglectful prostitute for a mother, and an abusive father and step-mother, Tim's life is one of crime and hate; it's all he has ever known. However, the bars of his jail cell aren't the only prison in which Tim lives. At thirty-eight he makes a choice, one far more challenging than the streets - he chooses freedom.
