Pulsation and Vibration in Hydroelectric

Machinery provides a compact

guidebook explaining the many different underlying physical mechanisms and their possible effects. Typical phenomena are described to assist in the proper diagnosis of problems and various key strategies for solution are compared and considered with support from practical experience and real-life examples. Flow-Induced Pulsation and Vibration in Hydroelectric ... Flow Induced Pulsation (FIP) Fluid flows in piping passing the entry to a closed end sidebranch, can generate vortices which coincide with strong acoustic resonances in the sidebranch and result in pulsations being generated which propagate both upstream and downstream within the main line. These pulsations impart periodic, mainly axial, forces at pipe bends and this can quickly shake the whole pipe system. Flow Induced Pulsation (FIP) | Spectrum Acoustic Flow-induced vibration of pipelines and piping can be caused by a number of mechanisms including: * Pumps and compressors which could produce pressure pulsations, exciting a response in nearby piping * Fluctuating flow past obstructions or objects in the flow (for example, thermowells or other intrusions in the flow) and piping dead legs Pipeline flow-induced vibration | Engineer Live Spectrum undertook analysis of flow induced turbulence (FIT) and flow induced excitation/pulsation. For the latter we use our PIPAC® (PIPework Acoustics) software to establish acoustic resonant lengths in complex pipework arrangements. In addition we looked at Acoustic Induced Vibration AIV /HFAE/Acoustic Fatigue). We recommended a range of modifications to the system. Case Studies: Flow Induced Pulsation (FIP) | Spectrum Acoustic from book Flow-Induced Pulsation and Vibration in Hydroelectric

Machinery (pp.E1-E1) Errata to: Flow-Induced Pulsation and Vibration in Hydroelectric Machinery Chapter · January 2013 with 266 Reads (PDF) Errata to: Flow-Induced Pulsation and Vibration in ... Previous design stage analysis carried out by Xodus showed that there was a potential risk of Vibration Induced Fatigue Failure to the turret gas lift system pipework due to Flow Induced Pulsation (FLIP) originating in the corrugated risers. The Client therefore imposed a safe operating flowrate through the gas lift risers of 55 MMSCFD. In order to overcome this operational restriction, a series of flow trials was performed. Flow Induced Pulsation (FLIP) Assessment | Xodus Group Pulsations and Vibrations The varying flow caused by reciprocating pumps, compressors or process conditions leads to a pulsating flow within the connected piping. Excessive pulsation amplitudes can lead to mechanical vibrations and thereby fatigue failure of the piping or supporting. Pulsations and Vibrations • Dynaflow Research Group Flow-induced vibration, or vortex shedding, is due to high flow velocities such as in a piping dead leg of a centrifugal compressor system. This study evaluates vortex shedding and potential vibration across dead leg branches. The study can also include FIV excitation of small-bore piping and components in the flow, such as thermowells. Flow-Induced Vibration (FIV) Analysis (Vortex Shedding ... Flow induced vibration is performed in accordance with Energy Institute Guidelines, 2nd edition, Jan. 2018 (Guidelines for the avoidance of vibration induced fatigue failure in process pipework). Study includes below kinds of estimation. Finite Element Analysis for FIV. Flow induced

turbulence; Mechanical excitation; Pulsation from positive displacement pumps and compressors Pipe Vibration - INERTANCE FIV, Pipe Vibration, Modal Analysis This is often due to flow induced vibration (FIV) and acoustic induced vibration (AIV), and is related to the flow of the main process fluid through the piping system. Other possible sources of piping vibration include: Mechanical vibration and pulsations from compressors and pumps; Piping vibrations | Flow induced & acoustic induced ... Vibrations and pressure pulsations in hydraulic turbine draft tubes may arise under partial load operation. In general, the central and circumferential parts of the flow that enter a draft tube from a runner, swirl as a forced vortex and a free vortex, respectively. The vortex core has very low pressure; thus, air cavities appear. Pressure Pulsation - an overview | ScienceDirect Topics The so called Flow Induced Pulsations (FLIP) phenomenon occurs in dry gas risers (such as Gas Export lines) and may generate high tonal noises up to 110 dB but may also lead to high vibration of adjacent equipment leading to significant fatigue failure. Flow Induced Pulsations (FLIP) in Rough Bore Gas Flexible ... Vibration is caused by a number of sources, including: External flow: tidal or current loading, leading to vortex-induced vibration (VIV) Internal flow: flow-induced vibration (FIV) including flow turbulence (FIT), multiphase and slugging, flow-induced pulsation (FLIP/singing flexibles and deadleg excitation) Subsea Piping Vibration (VIV, FIT, FIV, FLIP) | Vibration ... Prevention of pulsation and vibration induced failures in pipework (1 day) One day training course to improve awareness about the risk of pulsations and vibrations and to

identify the parameters and aspects which are necessary to control the risk and bring it to an acceptable level. Are you sure that the condition of your natural gas assets is such that the dynamic effects of pulsations and vibrations cannot damage your pipework or affect the mechanical integrity and safety of your gas ... Prevention of pulsation and vibration induced failures in ... As the gas flow is increased, high levels of distinctive tonal noise (frequency increasing with flow rate) and vibration occur on the associated piping. The pulsation induced vibration forces acting on the piping can excite mechanical natural frequencies if the piping is not properly supported. This is often due to flow induced vibration (FIV) and acoustic induced vibration (AIV), and is related to the flow of the main process fluid through the piping system. Other possible sources of piping vibration include: Mechanical vibration and pulsations from compressors and pumps;
