PAOLA JANIAH

Online Probabilistic Risk Assessment of Complex Marine Systems Charles C. Thomas Publisher
Microclimate for Cultural Heritage: Measurement, Risk Assessment, Conservation, Restoration, and Maintenance of Indoor and Outdoor Monuments, Third Edition, presents the latest on microclimates, environmental issues and the conservation of cultural heritage. It is a useful treatise on microphysics, acting as a practical handbook for conservators and specialists in physics, chemistry, architecture, engineering, geology and biology who focus on environmental issues and the conservation of works of art. It fills a gap between the application of atmospheric sciences, like the thermodynamic processes of clouds and dynamics of planetary boundary layer, and their application to a monument surface or a room within a museum. Sections covers applied theory, environmental

issues and conservation, practical utilization, along with suggestions, examples, common issues and errors. Incorporates research on the effects of climate change from Climate for Culture, the EU funded, five-year project focusing on climate change's impact on cultural heritage preservation Covers green lighting technology, like LED and OLED, it's impacts on indoor microclimates, preservation and color rendering Includes a case study on sea level issues and cultural heritage in Venice

Giornale della libreria

W. W. Norton & Company
Economists investigate the workings of markets and tend to set ethical questions aside. Theologians often dismiss economics, losing insights into the influence of market incentives on individual behavior. Mary L. Hirschfeld bridges this gap by showing how a humane economy can lead to the good life as outlined in the thought of St. Thomas Aquinas.

Containment Systems

NationalFireProtectionAssoc
Over the past fifty years, (financial) capitalism has

brought about an enormous growth in wealth. Millions around the world have been lifted out of poverty. However, the downsides of the present global economic constitution are rapidly becoming evident as well. Rising inequality, soaring debt levels, and repeated cycles of boom and bust have proven to be some of its key characteristics. After the 2008 crisis brought the financial system to the brink of collapse, new regulations, stricter supervision, higher capital requirements, and ethical codes were introduced to the sector. Today we find ourselves in the middle of another economic boom. Yet one pressing question remains: has anything changed? Have the (necessary) repairs fixed the flaws in the system? Or do we require even more fundamental reforms? This volume builds on the observation that society has co-evolved with the financial sector. We cannot simply claim that 'finance' was the sole instigator of the 2008 crisis. Society itself has become financialized; the process of replacing relations, structures of trust and reciprocity, by

anonymous and systemic transactions. The volume poses vital questions with regard to this societal development. How did this happen? And more importantly: is change possible? If yes, how? This volume contains 21 essays on the themes mentioned above. Authors include Jan Peter Balkenende, Wouter Bos, Lans Bovenberg, Govert Buijs, and Herman Van Rompuy. A recommendation by Dutch Minister of Finance Wopke Hoekstra is also included.

Springer Science & Business Media

As the manufacture of new toxic pharmaceutical products grows, it is necessary to handle more compounds of increasing toxicity in the workplace. For this reason, and because the expectation of better employee protection and improved working procedures is growing, there is an increasing demand for better containment systems and a better understanding of those systems.

Renewable Energy

Scale-Up Read Books Ltd
World Energy Balances provides comprehensive

energy balances for all the world's largest energy producing and consuming countries. It contains detailed data on the supply and consumption of energy for 150 countries and regions, including all OECD countries, over 100 other key energy producing and consuming countries, as well as world totals and various regional aggregates. The book includes graphs and detailed data by country for all energy sources - coal, gas, oil, electricity, renewables and waste - expressed in balance format. Alongside this, there are summary time series on production, trade, final consumption by sector, as well as key energy and economic indicators and an overview of trends in global energy production and use. More detailed data in original units are published in the companion publication World Energy Statistics.

Scaling-up renewals requires expanding electricity grids. Policy makers, regulators, and utilities, are working together to ensure renewable energy goals are not held back by the

lack of transmission.

National Electrical Code

IPSOA

The single most important reference in the electrical industry, the "National Electrical Code" (NEC()), is updated every three years and outlines minimum standards for all types of electrical installations. It is loaded with solutions designed to provide better safeguards, add greater usability, and bring provisions in line with technology trends. A must for anyone involved in electrical design, installation, or inspection.

Equilibrium, Motion, and Deformation

Offers the first overarching history of the humanities from Antiquity to the present.

Offshore Risk

Assessment IChemE

Offshore Risk Assessment

is the first book to deal

with quantified risk

assessment (QRA) as

applied specifically to

offshore installations and

operations. Risk

assessment techniques

have been used for some

years in the offshore oil

and gas industry, and

their use is set to expand

increasingly as the

industry moves into new

areas and faces new

challenges in older

regions. The book starts

with a thorough

discussion of risk analysis

methodology. Subsequent

chapters are devoted to

analytical approaches to

escalation, escape,

evacuation and rescue

analysis of safety and

emergency systems.

Separate chapters

analyze the main hazards

of offshore structures:

Fire, explosion, collision

and falling objects. Risk

mitigation and control are

then discussed, followed

by an outline of an

alternative approach to

risk modelling that

focuses especially on the

risk of short-duration

activities. Not only does

the book describe the state of the art of QRA, it also identifies weaknesses

and areas that need

development. Readership:

Besides being a

comprehensive reference

for academics and

students of

marine/offshore risk

assessment and

management, the book

should also be owned by

professionals in the

industry, contractors,

suppliers, consultants and

regulatory authorities.

Use in Clinical Practice

World Bank Publications

Recently, technology and

aging have been key

research areas in human

cognition. The Research

Topic "Digital Skills and

Life-long Learning: Digital

Learning as a New Insight

of Enhanced Learning by

the Innovative Approach

Joining Technology and

Cognition" investigated

technology's impact on

cognitive and intellectual

processes, highlighting

how intensively

technology can change

and/or enhance the

cognitive functioning

throughout one's lifespan.

The aim of this Research

Topic was to provide an

outlook through

multidisciplinary research

and development while

addressing the dynamic

intersection of cognition,

mind, and technology.

Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

2005 Crown House Pub Limited

These Guidelines review the use of medicines such as methadone, buprenorphine, naltrexone and clonidine in combination with psychosocial support in the treatment of people dependent on heroin or

other opioids. Based on systematic reviews of the literature and using the GRADE approach to determining evidence quality, the guidelines contain specific recommendations on the range of issues faced in organizing treatment systems, managing treatment programmes and in treating people dependent on opioids. Developed in collaboration with internationally acclaimed experts from the different regions of the globe, this book should be of interest to policy makers, program managers, and clinicians everywhere who seek to alleviate the burden of opioid dependence.

National Strategies for Administrative Simplification

Westminster John Knox Press

Modern humanity has accepted a truncated, impoverished definition of life. Focusing solely on material realities, we have forgotten that joy, purpose, and meaning come from a life that is both immersed in the temporal and alive to the transcendent. We have, in other words, ceased to live in God. In this book, renowned theologian Jürgen Moltmann shows us what that life of joy

and purpose looks like. Describing how we came to live in a world devoid of the ultimate, he charts a way back to an intimate connection with the biblical God. He counsels that we adopt a "theology of life," an orientation that sees God at work in both the mundane and the extraordinary and that pushes us to work for a world that fully reflects the life of its Creator. Moltmann offers a telling critique of the shallow values of consumerist society and provides a compelling rationale for why spiritual sensibilities and encounter with God must lie at the heart of any life that seeks to be authentically human.

1997 ASHRAE

Handbook World Health Organization

This book describes the development of systems of magnetic resonance imaging using the higher magnetic field strength of 3 tesla, in comparison to the current gold standard of 1.5 tesla. These new systems of MRI make it possible to perform with high spatial, temporal and contrast resolution not only morphological examinations but also functional studies on spectroscopy, diffusion, perfusion, and cortical activation, thus helping

research and providing an important tool for routine diagnostic activity. At the same time the new systems offer unparalleled sensitivity and specificity in the numerous conditions of neuroradiological interest. Measurement, Risk Assessment, Conservation, Restoration, and Maintenance of Indoor and Outdoor Monuments Springer Nature

The founding fathers vision of democracy was transformed into a one dollar, one vote democracy. Wall Street and corporations own all the money and thus all the votes. A clash of civilizations is promoted

as a scapegoat for capitalisms systemic failure
Stolen OECD Publishing
 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry

chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.
