EBNF: A Notation to Describe Syntax

This notation is referred to as Backus-Naur Form (BNF) or extended BNF (EBNF). BNF (Backus-Naur Form) is a syntactic metalanguage (i.e., a language about a language). The metalanguage is a formal notation for specifying the grammar that describes the syntax of a programming language. BNF was originally developed by John Backus and subsequent contribution from Peter Naur to describe the syntax of Algol 60 programming language.
