Peter “Catman” Criss has lived an incredible life in music, from the streets of Brooklyn to the social clubs of New York City to the ultimate heights of rock ‘n’ roll success and excess. KISS formed in 1973 and broke new ground with their elaborate makeup, live theatrics, and powerful sound. The band emerged as one of the most iconic hard rock acts in music history. Peter Criss, the Catman, was the heartbeat of the group. From an elevated perch on his pyrotechnic drum riser, he had a unique vantage point on the greatest rock show of all time, with the KISS Army looking back at him night after night. Peter Criscuola had come a long way from the homemade drum set he pounded on nonstop as a kid growing up in Brooklyn in the fifties. He endured lean years, street violence, and the rollercoaster music scene of the sixties, but he always knew he’d make it. *Makeup to Breakup* is Peter Criss’s eye-opening journey from the pledge to his ma that he’d one day play Madison Square Garden to doing just that. He conquered the rock world—composing and singing his band’s all-time biggest hit, “Beth” (1976)—but he also faced the perils of stardom and his own mortality, including drug abuse, treatment in 1982, near-suicides, two broken marriages, and a hard-won battle with breast cancer. Criss opens up with a level of honesty and emotion previously unseen in any musician’s memoir. *Makeup to Breakup* is the definitive and heartfelt account of one of rock’s most iconic figures, and the importance of faith and family. Rock ‘n’ roll has been chronicled many times, but never quite like this.

*Economics* 4th edition is a concise introduction to the core principles of economics, aimed at students taking their first, and probably only, one semester course in Economics. These students may be taking a business related degree, or may be from other degree schemes in the university taking a service course in Introductory Economics. There is a balanced split between the micro and macro economics section and the use of case studies and numerous examples makes this a lively little book for the reader. The real difference that this book offers the student is the amount and variety of questioning material that will really test

their understanding.

Why do the keypads on drive-up cash machines have Braille dots? Why are round-trip fares from Orlando to Kansas City higher than those from Kansas City to Orlando? For decades, Robert Frank has been asking his economics students to pose and answer questions like these as a way of learning how economic principles operate in the real world-which they do everywhere, all the time. Once you learn to think like an economist, all kinds of puzzling observations start to make sense. Drive-up ATM keypads have Braille dots because it's cheaper to make the same machine for both drive-up and walk-up locations. Travelers from Kansas City to Orlando pay less because they are usually price-sensitive tourists with many choices of destination, whereas travelers originating from Orlando typically choose Kansas City for specific family or business reasons. The Economic Naturalist employs basic economic principles to answer scores of intriguing questions from everyday life, and, along the way, introduces key ideas such as the cost-benefit principle, the "no cash on the table" principle, and the law of one price. This is as delightful and painless a way to learn fundamental economics as there is.

Managerial economics refers to the application of economic theory and the tools of analysis of decision science to examine how a firm can make optimal managerial decisions in the face of constraints it faces.
