20 Ways to Draw Everything Knopf

To all design students, landscapers, and garden designers of all stripes with any special curiosity in the 'why' behind landscape design and 'how' it relates to the world, *Designing Outside the Box* is your book. It offers a solid, clear, non-academic introduction and overview to the practice of making special places possible. Many books on creating the built landscape typically fall into one of two broad categories: 1. step-by-step guides to landscape design practice, or 2. deep-rooted intellectual exercises in landscape design theory. *Designing Outside the Box* bridges the divide between theory and practice. Jargon is minimal. The prose and examples are relatable. Analogies propel the message. Theory connects with reality in how people look at the landscape.

Drawing Is for Everyone 20 Ways

The debate surrounding hand drawing versus computer-generated imagery has become a hot topic. Having grown up with computers, today's interior design and architecture students are extremely adept at creating computer imagery, but often lack confidence in their freehand sketching skills, or do not know how to sketch at all. Sketching, and the careful observation that it entails, is essential for the successful development of the next generation of designers. Forty-five step-by-step exercises take the student from the simple three-dimensional forms of furniture, to interiors, to complex building exteriors, and cityscapes.

Technical topics covered include tools, line weights, perspective, proportion, composition, shading, serial views, and context. Exercises are illustrated with beautiful sketches specially created by the author. Sketching for Architecture + Interior Design is an indispensable and practical guide for students wishing to master the art of looking and sketching.

Sketch Like an Architect: Step-by-Step From Lines to Perspective

Simon and Schuster

It is hardly necessary to-day to advance a plea for the teaching of drawing, design, and craft-work. Their importance is, or should be, recognised by all authorities on education. It is well, however, that the teacher should have a clear comprehension of the part played by these subjects in the development of the intellect and character of the

scholar. This is essential, firstly, that he may have confidence in his teaching, with a corresponding strength of purpose and enthusiasm; and, secondly, that he may be in a position to defend effectively his belief in the work he is doing. Despite the fact that the majority of educational authorities recognise its value, critics still abound who would have us believe that such work merely panders to effeminate tastes and a love of luxury, whilst denying its practical utility. Such critics need to be confuted, and this can only be done by formulating definite reasons for the serious study of the subjects in hand. At the outset we must recognise that man is complex and many-sided, hence his needs are complex and multifarious. An unfortunate tendency exists in some quarters to regard human beings merely as productive machines with a capacity for executing so much work upon which the profit (usually accruing to those holding this view) will be so much, and that education should, therefore, be designed on this basis. Such an opinion is unworthy of consideration, and may be dismissed at once. It must be granted that, as far as possible, all human capacities are worth developing, otherwise the curriculum will have a bias, tending to develop certain faculties, leaving others to become atrophied. It is in some such comprehensive scheme that art work, as here dealt with, plays its part. It develops certain powers for which no scope is permitted in other subjects. The faculty of observation is quickened by training the vision, whilst the memory is cultivated to retain the images thus correctly seen. Drawing is a method of expression older by far, and more natural than writing, for the alphabet in use to-day is a development of early

picture writing. Again, the child as soon as he can walk endeavours to express graphically the beings and objects amongst which he lives, making no attempt to write.

Drawing for the Absolute Beginner
Crowood

A primer for design professionals across all disciplines that helps them create

compelling and original concept designs by hand--as opposed to on the computer--in order to foster collaboration and win clients. In today's design world, technology for expressing ideas is pervasive; CAD models and renderings created with computer software provide an easy option for creating highly rendered pieces. However, the accessibility of this technology means that fewer designers know how to draw by hand, express their ideas spontaneously, and brainstorm effectively. In a unique board binding that mimics a sketchbook, Drawing Ideas provides a complete foundation in the techniques and methods for effectively communicating to an audience through clear and persuasive drawings.
