This third book in the GISDATA series focuses on the widespread use of geographical information systems GIS in European local government. The editors include a wide range of applications carried out by different professional groups, and offer the opportunity of studying the extent to which diffusion of innovations like GIS are sensitive to

national issues such as cultural context, institutional setup and the availability of data.; The book answers key questions such as: what can be learnt from research on organizational behaviour in relation to technological innovation?; what are the classical features of the GIS diffusion process?; to what extent is the adoption and utilization of GIS facilitated - or impeded - by the organizational culture within which it takes place?; and what mechanisms can be applied to enhance the diffusion of GIS? The book covers aspects of diffusion in the following European countries: UK, France, Italy, Poland, Denmark, The Netherlands, Germany, Greece and Portugal.

Production engineering and management involve a series of planning and control activities in a production system. A production system can be as small as a shop with only one machine or as big as a global operation including many manufacturing plants, distribution centers, and retail locations in multiple continents. The product of a production system can also vary in complexity based on the material used, technology employed, etc. Every product, whether a pencil or an airplane, is produced in a system which depends on good management to be successful.

Production management has been at the center of industrial engineering and management science disciplines since

the industrial revolution. The tools and techniques of production management have been so successful that they have been adopted to various service industries, as well. The book is intended to be a valuable resource to undergraduate and graduate students interested in the applications of production management under fuzziness. The chapters represent all areas of production management and are organized to reflect the natural order of production management tasks. In all chapters, special attention is given to applicability and wherever possible, numerical examples are presented. While the reader is expected to have a fairly good understanding of the fuzzy logic, the book provides the necessary notation and preliminary knowledge needed in each chapter.

The San Jose Scale in 1896-1897 Elsevier
A fascinating book full of insights into how the brain controls your actions, reactions, and emotions in ways you've never imagined. Discover why you can't tickle yourself, 40,000 year old brain surgery, why kids are "brainier" than their parents, the person who coped perfectly well with just a third of a brain, and the incredible story of Einstein's brain and how it was stolen, cubed, and hidden in jars in a basement for decades.

Bollywood Sounds focuses on the songs of Indian films in their historical, social, commercial, and cinematic contexts. Author Jayson Beaster-Jones takes readers through the highly collaborative compositional process, highlighting the contributions of film directors, music directors (composers), lyricists, musicians, and singers in song

production. Through close musical and multimedia analysis of more than twenty landmark compositions, *Bollywood Sounds* illustrates how the producers of Indian film songs have long mediated a variety of musical styles, instruments, and performance practices to create a uniquely cosmopolitan music genre. As an exploration of the music of seventy years of Hindi films, *Bollywood Sounds* provides long-term historical insights into film songs and their musical and cinematic conventions in ways that will appeal both to scholars and to newcomers to Indian cinema.

Informatics for the Clinical Laboratory Springer

This series is directed to healthcare professionals who are leading the transformation of health care by using information and knowledge. Launched in 1988 as *Computers in Health Care*, the series offers a broad range of titles: some addressed to specific professions such as nursing, medicine, and health administration; others to special areas of practice such as trauma and radiology. Still other books in the series focus on interdisciplinary issues, such as the computer-based patient record, electronic health records, and networked healthcare systems. Renamed *Health Informatics* in 1998 to reflect the rapid evolution in the discipline now known as health informatics, the series will continue to add titles that contribute to the evolution of the field. In the series, eminent experts, serving as editors or authors, offer their accounts of innovations in health informatics. Increasingly, these accounts go beyond hardware and software to address the role of information in influencing the transformation of healthcare delivery systems around the world. The series also increasingly focuses on

“peopleware” and the organizational, behavioral, and societal changes that accompany the diffusion of information technology in health services environments.

239. Efficient use and effective conservation of available water resources are priorities for policymakers.

This paper reviews World Bank strategies for assisting developing countries in the comprehensive management of their water resources. It focuses mainly on the Bank's role in international water affairs and recommends a more proactive approach to promote dialogue, improve databases and analysis, and assist governments to manage their water resources more effectively. The study suggests that the Bank should strengthen its capacity to respond to requests for assistance in an objective, competent, and effective manner. Sustainable development should be the primary objective for its interventions.

This manual focuses on measuring the effects of training and institutional development programs on individuals, the organizations or economic sectors in which they work, and the welfare of the larger community. It presents a conceptual framework as well as real-life examples drawn from evaluations of the Economic Development Institute's learning and capacity-building programs in the developing world. It provides practical advice on developing evaluation plans, designing questionnaires, conducting interviews, analyzing data, reporting findings, and making recommendations. Emphasis is placed on the active participation of stakeholders throughout the process.

System Identification is a special section of the International Federation of Automatic Control (IFAC)-Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification. Topics include modeling and identification; step response and frequency response methods; correlation methods; least squares parameter estimation; and maximum likelihood and prediction error methods. After analyzing the basic ideas concerning the parameter estimation methods, the book elaborates on the asymptotic properties of these methods, and then investigates the application of the methods to particular model structures. The text then discusses the practical aspects of process identification, which includes the usual, general procedures for process identification; selection of input signals and sampling time; offline and on-line identification; comparison of parameter estimation methods; data filtering;

model order testing; and model verification. Computer program packages are also discussed. This compilation of tutorial papers aims to introduce the newcomers and non-specialists in this field to some of the basic methods and procedures used for system identification.

The Valet's Tragedy

Christmas time is believed by many, to be a season of hope and miracles. Sometimes, hearts are broken, faith is lost, and many times, hope is renewed. This Christmas, lives will be changed forever! In this short story, in a small town somewhere in America, there was a house without Christmas, just like many. That night, the temperature was at a freezing point. A 10-year-old boy named Kadi ran after his dog, Diana. She got very excited about the snow. When she did not stop, something unimaginable happened! It was awful. It was heartbreaking. It was a miracle. Do you believe in miracles?

For nearly sixty years, Grandmaster Robert Silverberg has been a significant presence in the world of science fiction. As prolific as he is gifted, Silverberg has amassed a body of work unique both in its richness and its variety. That work has influenced generations of other writers and has enriched the lives of untold numbers of devoted readers. In *The Book of Silverberg*, editors Gardner Dozois and William Schafer have assembled a tribute anthology fully worthy of the Master himself. The book begins with a pair of affectionate appreciations from Greg Bear and Barry Malzberg, and continues with a series of wonderfully original stories that inhabit and extend some of Silverberg's most memorable creations. In "In Old Pidruid," the late Kage Baker turns to the world of

Majipoor in a humorous and moving tale of rivalry and reconciliation. Kristine Kathryn Rusch's "Voyeuristic Tendencies" shows us the world of the 1972 novel *Dying Inside* from a wholly different perspective. Nancy Kress's "Eaters" provides a bleak and harrowing conclusion to the classic short story "Sundance." In "Silverberg, Satan, and Me or Where I Got the Idea for My Silverberg Story for This Anthology," the incomparable Connie Willis offers what might be the only plausible explanation for the whole Silverberg phenomenon. And elsewhere in the anthology, some of today's most notable writers Mike Resnick, Caitlin R. Kiernan, Elizabeth

Bear, James Patrick Kelly, and Tobias S. Buckell ring equally brilliant changes on a number of Silverberg's signature fictions. Funny, tragic, provocative, intelligent and always richly imagined, the stories in *The Book of Silverberg* are all notable accomplishments in themselves. Together, they comprise an exhilarating and altogether fitting celebration of one of science fiction's indisputable masters.
