Mergers and acquisitions (M&As) reshape the corporate landscape helping companies expand market share and gain a strategic advantage. The ability to understand and analyze these transactions is a crucial skill. The first step in acquiring that skill is being able to gather and analyse information on M&As from public sources, such as financial statements. This textbook helps its readers better analyze M&A transactions using information provided in financial statements. Covering accounting and reporting of consolidations, goodwill, non-controlling interests, step acquisitions, spin-offs, equity carve-outs, joint ventures, leveraged buyouts, disposal of subsidiaries, special purpose entities, and taxes, it focuses on the link between underlying economic events and the information in financial statements and how this link affects the assessment of corporate performance. The first part of the book provides description of the accounting rules governing M&A transactions, while the second part

includes cases of M&A transactions. Each case focuses on a different element of an M&A transaction, and it is followed by a detailed solution with a complete analysis. Unlike other books in this field, this textbook focuses exclusively on accounting and financial analysis for graduate and upper undergraduate level courses in financial analysis, corporate finance, and financial accounting.

Foresight is an area within Futures Studies that focuses on critical thinking concerning long term developments, whether within the public sector or in industry and management, and is something of a sub-section of complexity and network science. This book examines developments in foresight methodologies and relates in its greater part to the work done in the context of the COSTA22 network of the EU on Foresight Methodologies. Foresight is a professional practice that supports significant decisions, and as such it needs to be more assured of its claims to knowledge (methodology). Foresight is practiced across many domains and is not the preserve of specialized 'futurists', or indeed of foresight specialists. However, the disciplines of foresight are not well articulated or disseminated across domains, leading to re-inventions and practice that does not make best use of experience in other domains. The methodological development of foresight is an important task that aims at strengthening the pool

of the tools available for application, thereby empowering the actors involved in foresight practice. Elaborating further on methodological issues, such as those presented in the present book, enables the actors involved in foresight to begin to critique current practice from this perspective and, thirdly, to begin to design foresight practice. The present trends towards methodological concerns indicates a move from 'given' expert-predicted futures to one in which futures are nurtured through a dialogue among "stakeholders." The book has four parts, each elaborating on a set of aspects of foresight methodologies. After an introductory section, Part II considers theorizing about foresight methodologies. Part III covers system content issues, and Part IV presents foresight tools and approaches.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also

contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
