Wildflowers of  
South Africa  
Penguin*

Random House South Africa Field Guide to Wildflowers of South Africa describes more than 1 100 of the shrubs and herbs of the region, highlighting the most conspicuous species and those most likely to be encountered across the country. The emphasis is on identifying plants progressively to family, genus and species level: a novel identification aid and easy-to-use keys

guide users to the correct family and genus, while individual species descriptions, accompanied by a clear photograph, distribution map and an indication of flowering season, help them to pinpoint the plant. By using the guide, wild-flower enthusiasts at all levels will now be able to accurately identify plants in any part of South Africa. Wild Flowers of Namaqualand Penguin

Random House South Africa South Africa's varied landscape is home to some 19,000 shrubs and herbs, a large number of which bear flowers of intricate and often stunning beauty. This field guide covers more than 1,100 species, focusing on the most common, conspicuous and 'showy' plants of the region. It offers easy-to-use keys for identifying plant families, species descriptions

with vivid photographs, distribution maps and indication of flowering season. It will enable flower enthusiasts to accurately identify flowering plants encountered across South Africa.

This is a tribute to the late Gerhard Dreyer who spent years photographing the wild flowers of

South Africa and these are some of his best images selected from several thousand. This is a tribute not only to Gerhard's photography but also the amazing floral abundance and diversity of South Africa which will appeal to both locals and overseas tourists -- there is a short introduction by Ernst van Jaarsveld, an expert on flowers, based at the Kirstenbosh Botanical Gardens, with

extended captions on each flower. South Africa has the highest biodiversity for a temperate region, and world-wide is second only to Brazil and Indonesia, both tropical countries. The Fynbos biome alone has more plant species than the whole of Europe -- so a publication of this scope can only hope to give a representation of the unbelievable variety available, but anyone who

has a fondness for flowers will want this book. *Field Guide to Wild Flowers of South Africa, Lesotho and Swaziland* Struik Publishers South Africa's floral heritage, one of the richest in the world, continues to capture the excited attention of botanists and laymen. Like the land itself, its flora provides an abundance of contrasts, from the bashful disa to the proudly

beautiful strelitzia, the majestic giant protea and the wealth of ericas which share its rocky kingdom, the blazing carpets of daisies of Namaqualand, to the burnished spears of an aloe-covered hillside. The first chapter introduces the reader to the wonders of our floral kingdom while brief captions identify each flower and indicate when and where it is likely to be seen. Essentially all the more

decorative families of flowering plants have been covered. Plates are grouped according to families and a brief commentary introduces each family. Scientific names are used throughout with common names being given where these are accepted, as well as anecdotes relating to utilitarian, medicinal or horticultural uses. The guide concludes with a useful

bibliography of illustrated publications on South African wild flowers, providing guidelines for further reading, and a index.

that crisscross the mountain and reserve, plotted on accompanying route maps For anyone with an interest in identifying the flowers of the mountain and reserve, this will be an indispensable guide. *Vanishing Flora* Struik Pub Southern African Wild Flowers takes readers on a journey through the diverse landscapes of the subregion, showcasing the unique richness of its wild flowers

along the way. Each chapter focuses on a specific region, highlighting the most beautiful, interesting and rare plants occurring there. The journey begins at the Zambezi river and then moves down the eastern part of southern Africa through the well-watered 'land of plenty'. From here, the reader is taken through the splendours of the Cape fynbos and

then northwards, to end in the parched 'thirstlands' of the west. Beautiful full- colour photographs by well-known botanical photographer Colin Paterson-Jones celebrate the flora of the region, while the authoritative text reveals insights into the plants themselves, their origins, interactions with other living organisms, and their often remarkable adaptation to	sometimes hostile environments. Emphasis is given to the context in which the flowers grow; and the changing vegetation and landscapes are featured throughout, displaying the extraordinary diversity within southern Africa. <i>Wild Flowers of the Cape Peninsula - Quick ID Guide</i> Penguin Random House South Africa The genus Gladiolus has fascinated	plant collectors, taxonomists and the general public for centuries. Known for their spectacular flowers, these highly adapted and specialised plants occur throughout Africa, Madagascar, Europe and the Middle East. South Africa is home to more than half of the world's Gladiolus species and the Western Cape is the heart of species diversity. Saunders'

**First Field Guide to Wild Flowers of Southern Africa**

Sunbird Pub.  
Review by Alexander McCall Smith:  
“The beauty of Botswana’s wild flowers is something that always strikes the

visitor to that beguiling country. These plants, though, have all the subtlety and delicacy of dry-land vegetation. They are not always obvious and dramatic; they may be tucked away and visible only when one gets up close. Gwithie Kirby’s Wild Flowers of Southeast Botswana is a magnificent introduction to these beautiful plants. This is a book that anybody who visits

Botswana will surely treasure.” Wild Flowers of Southeast Botswana features 332 of the most common wild flower species occurring in the region. The species have been grouped into nine sections based on the predominant colour of the flower, and a quick visual guide is provided for quickly locating them. Each species account features simple descriptions of the plant, its leaves,

flowers and fruit, as well as attractive colour photographs, icons and simple leaf drawings. A nod to the cultural significance of each flower is provided via inclusion of Setswana common names, as well as a 'Notes' box, in which the traditional uses of the plants are provided. *Wild Flowers of South Africa* Penguin Random House South Africa The flowers are grouped according to floral colouring (sections are therefore colour coded), and concise information on the flowers is focused on identification in the field. The authoritative text, by a leading expert, also features interesting historical, medicinal and cultural facts about the flowers described. A distribution map of each flower is featured in conjunction with the textual entries and two pages of diagrams are further aids to easy identification of flowers by leaf and flower types and parts. *Wild Flowers of Southeast Botswana* Briza Publications Combining delicate use of colour and an eye for detail, Fabian's paintings convey the freshness of living plants without sacrificing botanical accuracy. *Transvaal Wild Flowers* Struik Publishers This field guide focuses on the wild

flowers of the Highveld and surrounding areas. Designed as a practical identification handbook, it aims to help nature-lovers in the field identify the various wild flowers they encounter. The 763 species described in this book are divided into six colour groups, so that colour is the first clue to the flower's identity. Within the colour group the species are organized into families, each defined

by its diagnostic characters. Flowers occurring in more than one colour group can be found in each relevant group.

 Field Guides  
 A Showcase of spectacular photographs of rare and little seen plants, raising awareness of their endangerment . South Africa

has lost 116 indigenous flower species to three extinction categories: 'Extinct', 'Extinct in the Wild' and 'Critically Endangered, Possibly Extinct'. Mindful of the fact that extinctions are mainly due to people, Cape-based photographer Anneke Kearney compiled this photographic record of endangered plants to make people aware of the dire future of our beautiful plants, so that

nobody can say, 'I didn't know'. Cape Town has more threatened species than any other area in the country. The most important other hotspots are Coega, Albany, Pondoland, KwaZulu-Natal midlands and Drakensberg, Magaliesberg, Sekhukhuneland-Drakensberg and Barberton. Renowned botanist and conservation campaigner, Dr Tony Rebelo, says in the Foreword that

a call to action is not just for us. It is for our children. It is not just for esoteric and idealist reasons. Thousands of visitors come ... every year just for the biodiversity. Hundreds of thousands more have it as one of the reasons for their visit. Our health, our relaxation, our existence is enhanced by living in a biodiversity showcase. The Littlest Kingdom on earth must retain its splendour ... there is space

for everyone, including the biodiversity that occurs nowhere else on earth. This book with its spectacular photographs of rare and little seen plants, is sure to make a huge contribution to raising awareness of and spreading critical information on our indigenous flora.
